General Information

This document contains the text of the Business Process Framework for context and more information please refer to “GB991 Core Frameworks Concepts and Principles” guidebook.

Preface

eTOM Business Process Framework

The eTOM or Business Process Framework is a reference framework for categorizing all the business activities used by an enterprise involved in delivering on-line Information, Communications and Entertainment services. This is done through definition of each area of business activity, in the form of process components or Process Elements that can be decomposed to expose progressive detail. These process elements can then be positioned within a model to show organizational, functional and other relationships, and can be combined within process flows that trace activity paths through the business.

The eTOM framework can serve as the blueprint for standardizing and categorizing business activities (or process elements) that will help set direction and the starting point for development and integration of Business and Operations Support Systems (BSS and OSS respectively). An important additional application for the eTOM framework is that it helps to support and guide work by TM Forum members and others to develop their solutions. It provides an industry-standard reference point, when considering internal process reengineering needs, partnerships, alliances, and general working agreements with other enterprises, and for suppliers into such enterprises, the eTOM framework outlines potential boundaries of process solutions, and the required functions, inputs, and outputs that must be supported by process solutions.

Introduction

This document contains the main text of eTOM for this domain. It is comprised of decompositions and descriptions of the process elements that make out this domain.

The focus of the Business Process Framework is on the business processes used by service providers, the linkages between these processes, and the use of Market, Product, Customer, Service, Resource, Business Partner, and Enterprise Management related information by multiple processes.

The decomposition starts with a top level process which is a Core Process that details the activity that takes place and describes all subsequent activities that occurs. Thereby this Core Process includes all of the information regarding the activity. Lower level processes also known as Task Processes are then describing a unique path of action and further detail the specific process. This is then repeated to lower level of granularly of up to seven levees.

At the start of each Level 2 process a diagram details all of its sub processes is placed. This diagram showers Level 3 process and the level 4 process below them in boxes where the same level boxes are side by side and the their child processes in side each box. Process that have further decomposition include another box in box diagram of level 5, 6 and 7 process if existing.

Process Associations and IDs

To aid understanding and navigation, each process described here has an associated indication.

Processes have been given a process ID throughout this document. The format of the numbering scheme work as follows:

.b.x.c.d.e where

- b: This digit is used to identify the originator of the process It is set to 1 if the process is the TMF original one, to 2 otherwise so if a company chooses to extended the Business Process Framework it can do so keeping the original numbering and extend as needed.
- x: Digit representing Domain
- c: Digit representing Level 2 process
- d: Digit representing Level 3 process
- e: Digit representing Level 4 process

The unique identifier thus associated with individual processes can thus be used to assist in locating individual processes.

Typographic Conventions

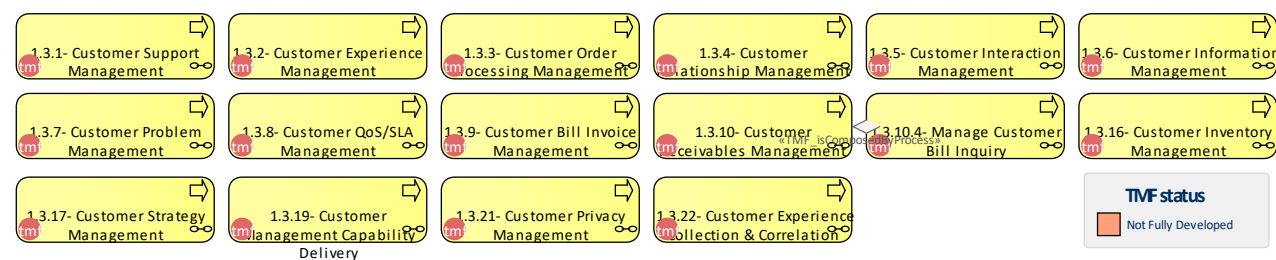

- A Business Process is represented by a *decorator* in form of an arrow located to the top right. A red dot decorator with the initial TMF indicates that this is a TM Forum Business Process. The color yellow background hints to the business layer.

Glossary

Name	Description
ABE	Aggregate Business Entity
BE	Business Entity
eTOM	enhanced Telecom Operation Map (TMF Framework)
ODA	Open Digital Architecture
SID	Shared Information Data model (TMF Framework) is the previous name of Information Framework
TAM	Telecom Applications Map (TMF Framework) is the previous name of Application Framework

Customer Domain

Customer Domain Main Diagram

Customer Receivables Management

Process Identifier: 1.3.10

Hierarchy Level: 2

Brief Description:

Ensure that enterprise revenue is collected through pre-established collection channels and put in place procedures to recover past due payments.

Extended Description:

The purpose of the Customer Receivables Management processes is to ensure that enterprise revenue is collected through pre-established collection channels and put in place procedures to recover past due payments. These processes are responsible for managing customer's billing account, processing their payments, performing payment collections and monitoring the status of the account balance.

These processes are responsible for, but not limited to:

- Establishment and management of customer payment processes and channels;
- Establishment and management of debt collection processes
- Establishment and management of third party arrangements to support collection and recovery of past due payments.

This process was renamed in 23.5. old name was Customer Bill Payments & Receivables Management

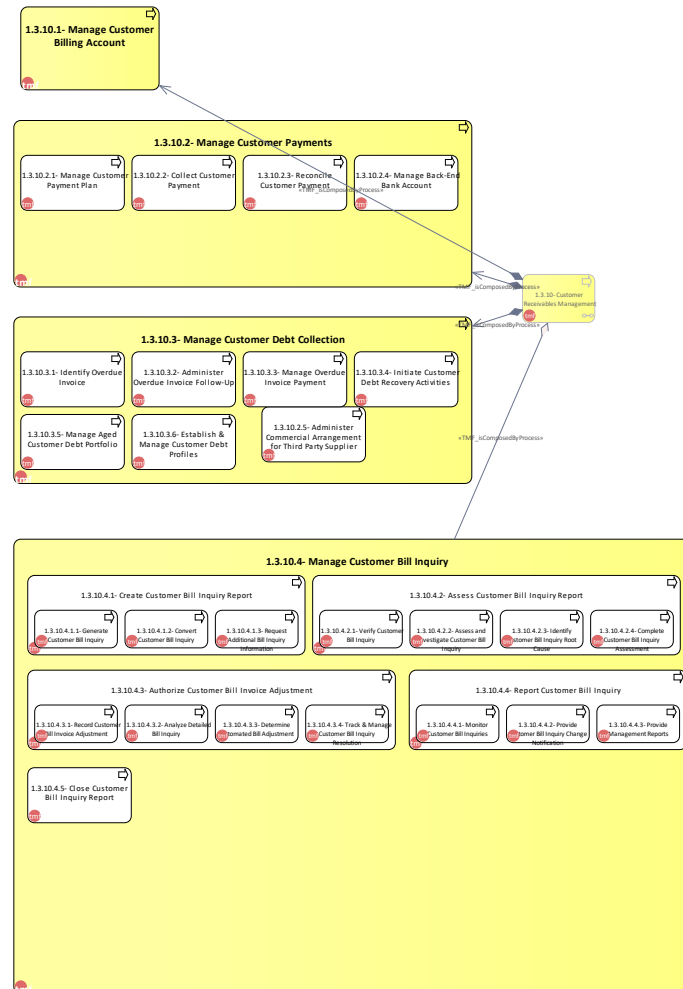

Figure 1: Customer Receivables Management Children

Manage Customer Billing Account

Process Identifier: 1.3.10.1

Hierarchy Level: 3

Brief Description:

Ensure effective management of the customer's billing account as it relates to the products purchased and consumed throughout the appropriate billing cycle.

Extended Description:

Manage Customer Billing Account's purpose pertains to effective management of the customer's billing account as it relates to the products purchased and consumed throughout the appropriate billing cycle. This process focuses on managing changes to the customer's billing account (for example, customer billing address, etc.) as it relates to the customer's service portfolio, such as ensuring that the correct purchased products are assigned to the customer's billing account for accurate billing.

Manage Customer Payments

Process Identifier: 1.3.10.2

Hierarchy Level: 3

Brief Description:

Collect payments made by the customer and reconcile the payments to the invoices.

Extended Description:

The purpose of the Manage Customer Payments process is to collect payments made by the customer and reconcile the payments to the invoices. This process is meant to match these payments with the services/invoices delivered to this customer. These processes can include credit/debit/EFT payments using various channels, either directly or through third parties, and cash or check payments, either directly or through third parties.

In all the above cases these processes are responsible for the processes interacting with the customers and/or the third parties. The processes are also responsible for establishing managing back-end bank accounts for receipt of the customer payments and for the transfer of funds collected by third parties. These processes are responsible for reconciling the money received into the bank accounts against the payments expected in the invoices. Additionally these processes inform the Financial Management on all those payments for updating the ledger.

These processes are responsible for establishing the requirements for, and managing any commercial arrangements agreed with, other parties. Note that the other Party Capability Delivery process is used to deliver the commercial agreements.

To the extent that processing of any payments is undertaken internally, i.e. check processing, these processes are responsible for managing the operation and quality of the internal processing.

Where payments do not match invoices, this process is responsible for informing the Manage Customer Debt Collection Manage Debt Management processes of any underpayments, and the Bill Inquiry Handling processes for any over-payments. Underpayments and overpayments are handled appropriately by these separate processes.

Manage Customer Payment Plan

Process Identifier: 1.3.10.2.1

Hierarchy Level: 4

Brief Description:

Manage payment plans made with the customer.

Extended Description:

Not used for this process element.

Collect Customer Payment

Process Identifier: 1.3.10.2.2

Hierarchy Level: 4

Brief Description:

Collect payments made by the customer.

Extended Description:

Not used for this process element.

Reconcile Customer Payment

Process Identifier: 1.3.10.2.3

Hierarchy Level: 4

Brief Description:

Reconcile the payments to the invoices.

Extended Description:

Not used for this process element.

Manage Back-End Bank Account

Process Identifier: 1.3.10.2.4

Hierarchy Level: 4

Brief Description:

Manage back-end bank accounts for receipt of the customer payments and for the transfer of funds collected by third parties.

Extended Description:

Not used for this process element.

Manage Customer Debt Collection

Process Identifier: 1.3.10.3

Hierarchy Level: 3

Brief Description:

Collect past due payments from the customer.

Extended Description:

The purpose of the Manage Customer Debt Collection process is to collect past due payments from the customer. This process monitors the amount due from the customer, i.e. check whether the payments are made on time, and implements necessary activities and policies to recover amounts overdue.

The responsibilities of this process include, but are not limited to:

- Identifying invoices which are overdue for payment;
- Initiating and managing follow-up with customers having overdue amounts;
- Arranging and monitoring payment plans to allow customers to pay overdue amounts in installments;
- Initiating debt recovery activities in accordance with appropriate commercial practice and policies;
- Managing the aged customer debt portfolio;
- Establishing and managing customer debt profiles to assist in managing debt recovery and debt risk on a customer, product or customer group basis;
- Establishing and managing commercial arrangements with third parties for the recover of aged debt, and/or for the write-off and selling of parts of the debt portfolio to third parties.

Note that these processes may initiate a direct enquiry to the customer and attempt to manage the initial recovery through the Bill Inquiry Handling processes. These processes use policies established by the Support Bill Payments & Receivable Management process to direct any escalation of the recovery processes being employed.

Note that where third party arrangements need to be put in place, these processes are responsible for establishing the requirements for, and managing any commercial arrangements agreed with, third party suppliers. The Party Tender Management and Party Agreement Management processes are used deliver the commercial agreements.

Identify Overdue Invoice

Process Identifier: 1.3.10.3.1

Hierarchy Level: 4

Brief Description:

Identify invoices which are overdue for payment.

Extended Description:

Not used for this process element.

Administer Overdue Invoice Follow-Up

Process Identifier: 1.3.10.3.2

Hierarchy Level: 4

Brief Description:

Initiate and manage follow-up with customers having overdue amounts.

Extended Description:

Not used for this process element.

Manage Overdue Invoice Payment

Process Identifier: 1.3.10.3.3

Hierarchy Level: 4

Brief Description:

Arrange and monitor payment plans to allow customers to pay overdue amounts in installments.

Extended Description:

Not used for this process element.

Initiate Customer Debt Recovery Activities

Process Identifier: 1.3.10.3.4

Hierarchy Level: 4

Brief Description:

Initiate debt recovery activities in accordance with appropriate commercial practice and policies.

Extended Description:

Not used for this process element.

Administer Commercial Arrangement for Third Party Supplier

Process Identifier: 1.3.10.2.5

Hierarchy Level: 4

Brief Description:

Establish the requirements for, and manage any commercial arrangements agreed with, third party suppliers.

Extended Description:

Not used for this process element.

Manage Aged Customer Debt Portfolio

Process Identifier: 1.3.10.3.5

Hierarchy Level: 4

Brief Description:

Manage the aged customer debt portfolio.

Extended Description:

Not used for this process element.

Establish & Manage Customer Debt Profiles

Process Identifier: 1.3.10.3.6

Hierarchy Level: 4

Brief Description:

Establish and manage customer debt profiles to assist in managing debt recovery and debt risk on a customer, product or customer group basis.

Extended Description:

Not used for this process element.

Manage Customer Bill Inquiry

Process Identifier: 1.3.10.4

Hierarchy Level: 3

Brief Description:

Ensure the timely and effective fulfillment of all customer bill inquiries and complaints.

Extended Description:

The purpose of Manage Customer Bill Inquiry process is to ensure the timely and effective fulfillment of all customer bill inquiries and complaints. This process is responsible for managing customer interaction as it relates to a customer's billing relationship to a Service Provider. This includes the creation of inquiries against the customer's billing account(s), and management of changes to customer billing account structure and details, the managing of all customer bill inquiry lifecycle, reporting changes and updates and closing of customer bill inquiry when all activities were accomplished. This process can be viewed via traditional means, with a service representative managing the customer or via e-business means. In the latter case, inquiries, complaints and changes to details would be handled via electronic media without the intervention of a representative.

This was an L2 process in 24.0 it was renamed old name was Customer Bill Inquiry Handling

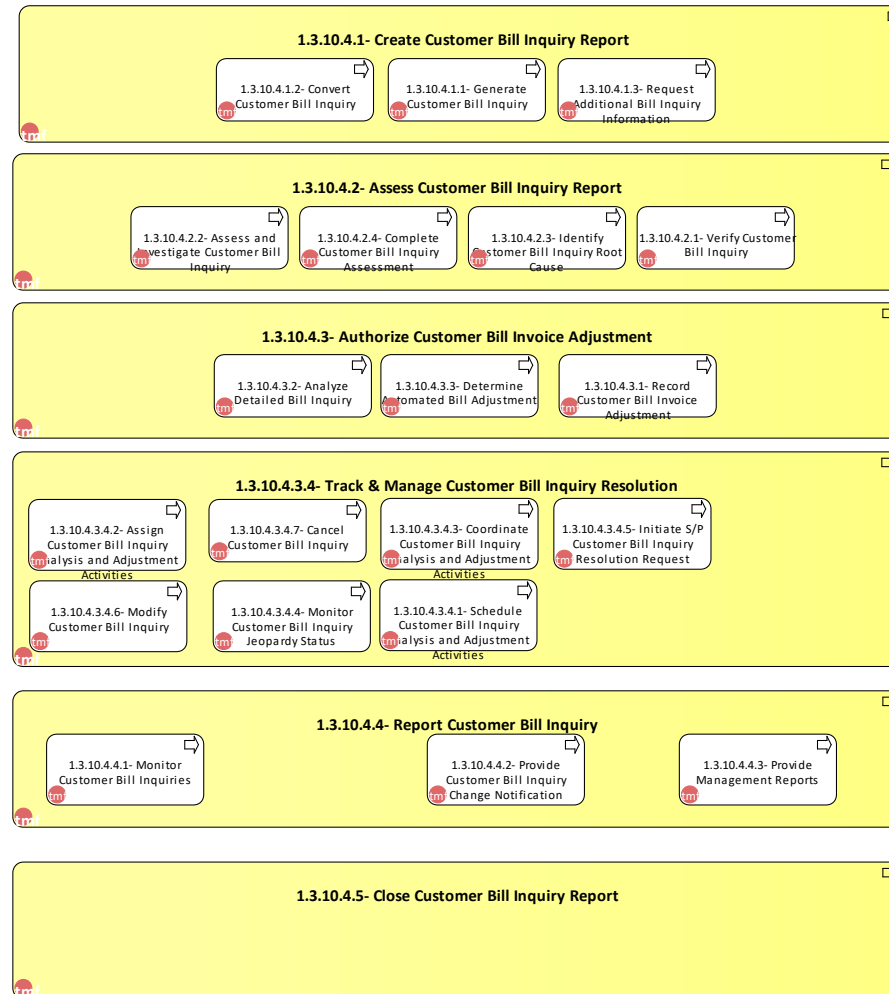

Figure 2: Manage Customer Bill Inquiry Children

Create Customer Bill Inquiry Report

Process Identifier: 1.3.10.4.1

Hierarchy Level: 4

Brief Description:

Create a new customer bill inquiry report.

Extended Description:

The objective of the Create Customer Bill Inquiry Report process is to create a new customer bill inquiry report, modify existing customer bill inquiry reports, and request cancellation of existing customer bill inquiry reports.

A new customer bill inquiry report may be created as a result of specific customer initiated bill inquiry or complaint notifications.

If the customer bill inquiry report is created, the Create Customer Bill Inquiry Report processes are responsible for converting the received information into a form suitable for the Bill Inquiry Handling processes, and for requesting additional information if required.

Generate Customer Bill Inquiry

Process Identifier: 1.3.10.4.1.1

Hierarchy Level: 5

Brief Description:

Generate a new customer bill inquiry.

Extended Description:

Not used for this process element.

Convert Customer Bill Inquiry

Process Identifier: 1.3.10.4.1.2

Hierarchy Level: 5

Brief Description:

Convert the received information into a form suitable for the Bill Inquiry Handling processes.

Extended Description:

Not used for this process element.

Request Additional Bill Inquiry Information

Process Identifier: 1.3.10.4.1.3

Hierarchy Level: 5

Brief Description:

Request additional information for the Bill Inquiry Handling processes.

Extended Description:

Not used for this process element.

Assess Customer Bill Inquiry Report

Process Identifier: 1.3.10.4.2

Hierarchy Level: 4

Brief Description:

Assess the bill inquiry report to determine the nature of the inquiry, and to determine whether the inquiry has arisen due to circumstances originating in other process areas.

Extended Description:

The purpose of the Assess Customer Bill Inquiry Report processes is to assess the bill inquiry report to determine the nature of the inquiry, and to determine whether the inquiry has arisen due to circumstances originating in other process areas.

The responsibilities of these processes include, but are not limited to:

- Verifying whether the information supplied by the customer is correct
- Performing assessment and investigation based on the customer provided information to determine whether the circumstances leading to the bill inquiry is linked to the underlying services, or other processes.

The Assess Customer Bill Inquiry Report processes will make the results of the investigation available to other processes. The Assess Customer Bill Inquiry Report processes will update the customer bill inquiry report, as required during the assessment, and when the root cause has been identified.

The Assess Customer Bill Inquiry Report processes will notify the Track & Manage Bill Inquiry Resolution processes when the investigation and assessment is complete.

Verify Customer Bill Inquiry

Process Identifier: 1.3.10.4.2.1

Hierarchy Level: 5

Brief Description:

Verify whether the information supplied by the customer is correct.

Extended Description:

Not used for this process element.

Assess and Investigate Customer Bill Inquiry

Process Identifier: 1.3.10.4.2.2

Hierarchy Level: 5

Brief Description:

Assess and investigate customer bill inquiry based on the customer provided information.

Extended Description:

Not used for this process element.

Identify Customer Bill Inquiry Root Cause

Process Identifier: 1.3.10.4.2.3

Hierarchy Level: 5

Brief Description:

Identify the root cause on customer bill inquiry.

Extended Description:

Not used for this process element.

Complete Customer Bill Inquiry Assessment

Process Identifier: 1.3.10.4.2.4

Hierarchy Level: 5

Brief Description:

Complete the assessment when the investigation and assessment is complete.

Extended Description:

Not used for this process element.

Authorize Customer Bill Invoice Adjustment

Process Identifier: 1.3.10.4.3

Hierarchy Level: 4

Brief Description:

Adjust the customer's bill invoice based on detailed assessment and/or policy.

Extended Description:

The purpose of the Authorize Customer Bill Invoice Adjustment processes is to adjust the customer's bill invoice based on detailed assessment and/or policy.

The responsibilities of this process include, but are not limited to:

- Determination of whether policy allows for automated adjustment of the customer bill invoice, and approving any resultant adjustments;
- Undertaking more detailed analysis and investigation to determine whether a bill adjustment is acceptable, including gaining appropriate management authority to make the adjustment
- Recording the results of the adjustment if approved into the records relating to the customer's bill invoice.

These processes rely on the availability of appropriate adjustment policies, which are created within the Support Bill Inquiry Handling processes, for the timely resolution of major billing disputes.

The resolution processes may require investigation of the billing processes themselves to determine whether the disputed bills are the result of quality errors within the Service Provider processes.

Record Customer Bill Invoice Adjustment

Process Identifier: 1.3.10.4.3.1

Hierarchy Level: 5

Brief Description:

Record the results of the adjustment if approved into the records relating to the customer's bill invoice.

Extended Description:

Not used for this process element.

Analyze Detailed Bill Inquiry

Process Identifier: 1.3.10.4.3.2

Hierarchy Level: 5

Brief Description:

Analyze and investigate to determine whether a bill adjustment is acceptable.

Extended Description:

Not used for this process element.

Determine Automated Bill Adjustment

Process Identifier: 1.3.10.4.3.3

Hierarchy Level: 5

Brief Description:

Determination of whether policy allows for automated adjustment of a party bill invoice, and approving any resultant adjustments.

Extended Description:

Not used for this process element.

Track & Manage Customer Bill Inquiry Resolution

Process Identifier: 1.3.10.4.3.4

Hierarchy Level: 5

Brief Description:

Efficiently assign, coordinate and track specific customer bill inquiry analysis, bill adjustments and ensuring that appropriate credits and/or other agreed adjustments are made available to the adjustments processes activities and escalate inquiries.

Extended Description:

The objective of the Track & Manage Customer Bill Inquiry Resolution processes is to efficiently assign, coordinate and track specific customer bill inquiry analysis, bill adjustments and ensuring that appropriate credits and/or other agreed adjustments are made available to the adjustments processes activities, and escalate any open customer bill inquiries in jeopardy.

Responsibilities of these processes include, but are not limited to:

- Scheduling, assigning and coordinating analysis and specific customer bill inquiry/complaint adjustment activities;

- Canceling a customer bill inquiry when the specific request was related to a false billing event
- Monitoring the jeopardy status of open customer bill inquiries, and escalating customer bill inquiries as necessary.

Note that some specific product and/or service components may be owned and managed by other parties. In these cases the Track & Manage Customer Bill Inquiry Resolution process is responsible for initiating requests, through - the other parties Settlements & Payments Management for resolution by the other parties of the specific bill inquiries/complaints.

These processes will co-ordinate all the actions necessary in order to guarantee that all tasks are finished at the appropriate time and in the appropriate sequence.

The Track & Manage Bill Inquiry Resolution processes will also inform the Close Customer Bill Inquiry processes by modifying the customer bill inquiry status to cleared when the specific customer bill inquiry/complaint issues have been resolved.

Schedule Customer Bill Inquiry Analysis and Adjustment Activities

Process Identifier: 1.3.10.4.3.4.1

Hierarchy Level: 6

Brief Description:

Schedule analysis and specific customer bill inquiry/complaint adjustment activities.

Extended Description:

Not used for this process element.

Assign Customer Bill Inquiry Analysis and Adjustment Activities

Process Identifier: 1.3.10.4.3.4.2

Hierarchy Level: 6

Brief Description:

Assign analysis and specific customer bill inquiry/complaint adjustment activities.

Extended Description:

Not used for this process element.

Coordinate Customer Bill Inquiry Analysis and Adjustment Activities

Process Identifier: 1.3.10.4.3.4.3

Hierarchy Level: 6

Brief Description:

Coordinate analysis and specific customer bill inquiry/complaint adjustment activities.

Extended Description:

Not used for this process element.

Monitor Customer Bill Inquiry Jeopardy Status

Process Identifier: 1.3.10.4.3.4.4

Hierarchy Level: 6

Brief Description:

Monitor the jeopardy status of open customer bill inquiries.

Extended Description:

Not used for this process element.

Initiate S/P Customer Bill Inquiry Resolution Request

Process Identifier: 1.3.10.4.3.4.5

Hierarchy Level: 6

Brief Description:

Initiate requests, through - S/P Settlements & Payments Management for resolution by the supplier/partner of the specific bill inquiries/complaints.

Extended Description:

Not used for this process element.

Modify Customer Bill Inquiry

Process Identifier: 1.3.10.4.3.4.6

Hierarchy Level: 6

Brief Description:

Modify existing customer bill inquiries.

Extended Description:

Not used for this process element.

Cancel Customer Bill Inquiry

Process Identifier: 1.3.10.4.3.4.7

Hierarchy Level: 6

Brief Description:

Request cancellation of existing customer bill inquiry reports.

Extended Description:

Not used for this process element.

Report Customer Bill Inquiry

Process Identifier: 1.3.10.4.4

Hierarchy Level: 4

Brief Description:

Report on the customer's bill inquiry.

Extended Description:

The objective of the Report Customer Bill Inquiry processes is to monitor the status of customer bill inquiries, provide notifications of any changes and provide management reports.

These processes are responsible for continuously monitoring the status of customer bill inquiries and managing notifications to other processes and to other parties, including customers, registered to receive notifications of any status changes. Monitor Customer Bill Inquiries

Process Identifier: 1.3.10.4.4.1

Hierarchy Level: 5

Brief Description:

Monitor the status of customer bill inquiries continuously.

Extended Description:

Not used for this process element.

Provide Customer Bill Inquiry Change Notification

Process Identifier: 1.3.10.4.4.2

Hierarchy Level: 5

Brief Description:

Manage notifications to other processes and to other parties.

Extended Description:

Not used for this process element.

Provide Management Reports

Process Identifier: 1.3.10.4.4.3

Hierarchy Level: 5

Brief Description:

Provide management reports and any specialized summaries of the efficiency and effectiveness of the overall Bill Inquiry Handling processes.

Extended Description:

Not used for this process element.

Close Customer Bill Inquiry Report

Process Identifier: 1.3.10.4.5

Hierarchy Level: 4

Brief Description:

Close a customer bill inquiry report when the bill inquiry/complaint has been resolved.

Extended Description:

The objective of the Close Customer Bill Inquiry Report processes is to close a customer bill inquiry report when the bill inquiry/complaint has been resolved.

These processes monitor the status of all open customer bill inquiry reports, and recognize that a customer bill inquiry report is ready to be closed when the status is changed to cleared.

Customer Experience Collection & Correlation

Process Identifier: 1.3.22

Hierarchy Level: 2

Brief Description:

The purpose of the Customer Experience Collection & Correlation process is to collect Customer interaction related data and correlate the data to the Customer's products, interactions and customer journeys.

Extended Description:

The purpose of the Customer Experience Collection & Correlation process is to collect Customer interaction related data and correlate the data to the Customer's products, interactions and customer journeys. This Customer Experience data is formatted as feedback reports to feed into the Business Value Development processes to support improvements. Data related to customers interactions are:

Customer Journey overall success

Marketing campaigns

Sales Campaigns

Customer Order Processing Management

Process Identifier: 1.3.3

Hierarchy Level: 2

Brief Description:

Customer Order Processing Management business process directs and controls all activities that operationally realize orders for customer.

Extended Description:

Customer Order Processing Management business process directs and controls all activities that operationally realize orders for customer.

Customer Order Processing Management assures the capture, processing, fulfillment, "shipping", delivery and reporting of customer orders from feasibility assessment, purchasing, payment, fulfillment and follow up with the customer for closure.

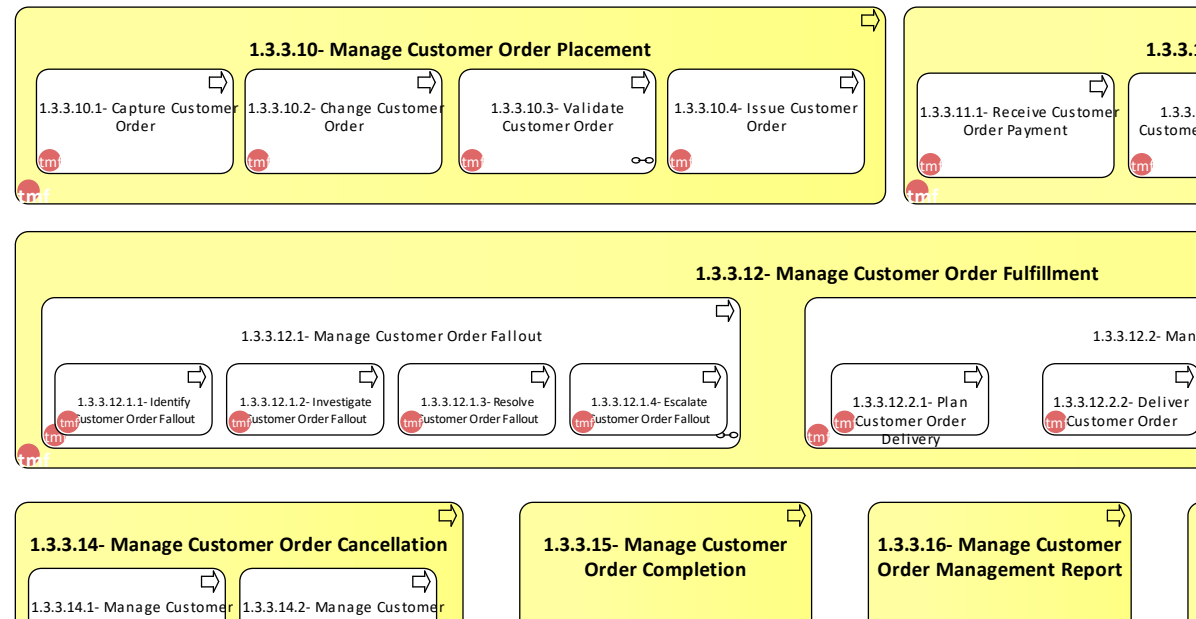

Figure 4: Customer Order Processing Management Children

Manage Customer Order Placement

Process Identifier: 1.3.3.10

Hierarchy Level: 3

Brief Description:

Manage Customer Order Placement business activity directs and controls the capture of information to enable create customer order, change customer order and validate customer order based on ordering information from customer.

Extended Description:

Manage Customer Order Placement business activity directs and controls the capture of information to enable create customer order, change customer order and validate customer order based on ordering information from customer.

Manage Customer Order Placement ensures that the organization can identify customers, facilitate product selection, capture requirements and confirm payments associated to orders.

Capture Customer Order

Process Identifier: 1.3.3.10.1

Hierarchy Level: 4

Brief Description:

Capture Customer Order business activity identifies all customer order requirements from the customer, including customer information, requested products/services, expected terms of delivery, and the customer order policy related to the order.

Extended Description:

Capture Customer Order business activity identifies all customer order requirements from the customer, including customer information, requested products/services, expected terms of delivery, and the customer order policy related to the order.

Capture Customer Order formalizes an order in order to initiate a Customer Order Validation process.

Change Customer Order

Process Identifier: 1.3.3.10.2

Hierarchy Level: 4

Brief Description:

Change Customer Order business activity modifies customer orders and order items according to customer order management policies.

Extended Description:

Change Customer Order business activity modifies customer orders and order items according to customer order management policies.

Change Customer Order enables editing orders based on order details provided by the customer, including order items, quantities, terms underlying the ordering, variants of items etc.

Validate Customer Order

Process Identifier: 1.3.3.10.3

Hierarchy Level: 4

Brief Description:

Validate Customer Order business activity assures customer orders are complete with all requirements that meet the order policies as well as any related business rules and policy.

Extended Description:

Validate Customer Order business activity assures customer orders are complete with all requirements that meet the order policies as well as any related business rules and policy.

Validate Customer Order business activity supports feasibility checks, identifying duplicate customer orders, performing customer information verification, fraud check, item validation, credit limit requirement etc. and payment confirmation.

Issue Customer Order

Process Identifier: 1.3.3.10.4

Hierarchy Level: 4

Brief Description:

Issue Customer Order business activity validates order information is complete, accurate and has met the expectations of the business.

Extended Description:

Issue Customer Order business activity validates order information is complete, accurate and has met the expectations of the business.

This business activity ensure that all necessary information about the Customer Order (for example, type of product, install address, special requirements, etc.) is available. The customer orders may be required to satisfy pertinent customer requests from the Selling (in particular taking into account the purchase order from Negotiate Sales) may arise as a result of requests for customer order delivery activities required to satisfy customer needs.

Manage Customer Order Payment

Process Identifier: 1.3.3.11

Hierarchy Level: 3

Brief Description:

Manage Customer Order Payment business activity directs and controls customer payments for orders received. It is responsible for ensuring that customer payments for orders are processed, and accounted for correctly.

Extended Description:

Manage Customer Order Payment business activity directs and controls customer payments for orders received. It is responsible for ensuring that customer payments for orders are processed, and accounted for correctly.

This business activity ensures that payments are received, validated, correctly applied to the customers accounts, tracked for compliance, and where applicable the corresponding portion of the payment sent to upstream business partners.

Receive Customer Order Payment

Process Identifier: 1.3.3.11.1

Hierarchy Level: 4

Brief Description:

Receive Customer Order Payment business activity is responsible for receiving payments from customers (via any medium, channel or means).

Extended Description:

Receive Customer Order Payment business activity is responsible for receiving payments from customers (via any medium, channel or means).

Receive Customer Order Payment will support the organization's customer order management policies, such as customer order payment types, customer order payment modes, customer order payment plans etc.

Validate Customer Order Payment

Process Identifier: 1.3.3.11.2

Hierarchy Level: 4

Brief Description:

Validate Customer Order Payment business activity is responsible check that payment received is valid and approved.

Extended Description:

Validate Customer Order Payment business activity is responsible check that payment received is valid and approved.

Validate Customer Order Payment will support fraud detection and prevention policies.

Monitor Customer Order Payment

Process Identifier: 1.3.3.11.3

Hierarchy Level: 4

Brief Description:

Monitor Customer Order Payment business activity tracks payments to ensure they are processed on time and in compliance with the organizations customer order management policies.

Extended Description:

Monitor Customer Order Payment business activity tracks payments to ensure they are processed on time and in compliance with the organizations customer order management policies.

Send Customer Order Payment

Process Identifier: 1.3.3.11.4

Hierarchy Level: 4

Brief Description:

Send Customer Order Payment business activity is responsible for transferring to upstream business partners based on the underlying terms supporting the customer order management process.

Extended Description:

Send Customer Order Payment business activity is responsible for transferring to upstream business partners based on the underlying terms supporting the customer order management process.

Manage Customer Order Fulfillment

Process Identifier: 1.3.3.12

Hierarchy Level: 3

Brief Description:

Manage Customer Order Fulfillment business activity directs and controls all activities that provision and activate orders marked for fulfillment

Extended Description:

Manage Customer Order Fulfillment business activity directs and controls all activities that provision and activate orders marked for fulfillment.

Manage Customer Order Fulfillment ensure customer orders are organized and arranged (orchestrated), and tracked to meet committed ordering terms.

Manage Customer Order Fallout

Process Identifier: 1.3.3.12.1

Hierarchy Level: 4

Brief Description:

Manage Customer Order Fallout business activity controls orders that have failed during the fulfillment stage of a customer order process.

Extended Description:

Manage Customer Order Fallout business activity controls orders that have failed during the fulfillment stage of a customer order process.

Manage Order Fallout identify any failed customer order, investigates fallout causes, implements resolution of fallouts, and where required may escalate fallouts based on business and customer expectations. These scenarios lead to the need to manage exceptions that demand interventions that are not part of the standard customer order fulfillment lifecycle. It includes assessing order fallout for root cause and identification of preventive and corrective actions.

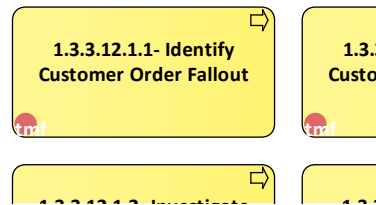

Figure 5: Manage Customer Order Fallout Children

Identify Customer Order Fallout

Process Identifier: 1.3.3.12.1.1

Hierarchy Level: 5

Brief Description:

Identify Customer Order Fallout business activity searches and finds customer orders that have failed the customer order process.

Extended Description:

Identify Customer Order Fallout business activity searches and finds customer orders that have failed the customer order process.

Identify Customer Order Fallout can will visibility in the delivery activity of the customer order, as well as reporting of customer order fallouts. In "Identify Customer Order Fallout" this business activity will categorize and prioritize fallout customer orders according to business rules and policies (terms of service).

Investigate Customer Order Fallout

Process Identifier: 1.3.3.12.1.2

Hierarchy Level: 5

Brief Description:

Investigate Customer Order Fallout business activity covers tasks that assess customer orders that have failed.

Extended Description:

Investigate Customer Order Fallout business activity covers tasks that assess customer orders that have failed.

Investigate Customer Order Fallout include activities to identify the customer order fallout root cause, evaluation and reporting customer order fallout impact, and providing all attribution to support resolving the Customer Order Fallout.

Resolve Customer Order Fallout

Process Identifier: 1.3.3.12.1.3

Hierarchy Level: 5

Brief Description:

Resolve Customer Order Fallout business activity find resolution to fallout customer orders, given their root cause.

Extended Description:

Resolve Customer Order Fallout business activity find resolution to fallout customer orders, given their root cause.

Resolve Customer Order Fallout activities may trigger interactions that provide temporary workaround solution, but is ultimately responsible to ensure resolution supports customer management objectives.

Escalate Customer Order Fallout

Process Identifier: 1.3.3.12.1.4

Hierarchy Level: 5

Brief Description:

Escalate Customer Order Fallout business activity logs and communicates concerns with Customer Order Fallout in a bid to effectively resolve the fallout.

Extended Description:

Escalate Customer Order Fallout business activity logs and communicates concerns with Customer Order Fallout in a bid to effectively resolve the fallout.

Escalate Customer Order Fallout may increase the rapid resolution of the fallout; bring more attention to the fallout impact; or prioritize allocation of capacity and capabilities to addressing the customer order fallout; by gaining higher-level support for the resolution of the fallout customer order.

Manage Customer Order Delivery

Process Identifier: 1.3.3.12.2

Hierarchy Level: 4

Brief Description:

Manage Customer Order Delivery business activity directs and controls activities that deliver orders according to the requirement of the customer.

Extended Description:

Manage Customer Order Delivery business activity directs and controls activities that deliver orders according to the requirement of the customer.

Manage Customer Order Delivery

Plan Customer Order Delivery

Process Identifier: 1.3.3.12.2.1

Hierarchy Level: 5

Brief Description:

Plan Customer Order Delivery business activity defines the required customer order delivery activities, customer order delivery support requirements and the schedule to follow in fulfilling the customer order.

Extended Description:

Plan Customer Order Delivery business activity defines the required customer order delivery activities, customer order delivery support requirements and the schedule to follow in fulfilling the customer order.

Plan Customer Order Delivery business activity includes all tasks for the customer order delivery, including identifying the supporting activities, scheduling the activities, relating them together based on customer ordering procedures and guidelines.

Deliver Customer Order

Process Identifier: 1.3.3.12.2.2

Hierarchy Level: 5

Brief Description:

Deliver Customer Order business activity directs and controls the activity of providing the ready items of the customer reorder to the customer.

Extended Description:

Deliver Customer Order business activity directs and controls the activity of providing the ready items of the customer reorder to the customer.

Delivery Customer Order business activity identifies the customer to be delivered to, confirms all items related to the order, and follow the Plan Customer Order delivery plan to deliver the order.

Monitor Customer Order Delivery

Process Identifier: 1.3.3.12.2.3

Hierarchy Level: 5

Brief Description:

Monitor Customer Order Delivery business activity checks and tracks customer order delivery activities with status reporting.

Extended Description:

Monitor Customer Order Delivery business activity checks and tracks customer order delivery activities with status reporting.

Monitor Customer Order Delivery business activity ensures orders are tracks with their statuses across the order fulfillment lifecycle.

Verify Customer Order Delivery

Process Identifier: 1.3.3.12.2.4

Hierarchy Level: 5

Brief Description:

Verify Customer Order Delivery business activity checks the validity of the order delivery status according to the Customer Order.

Extended Description:

Verify Customer Order Delivery business activity checks the validity of the order delivery status according to the Customer Order.

Verify Customer Order Delivery ensures that all supporting delivery requirements and obligations of the customer order has been completely fulfilled to the customer.

Manage Customer Order Cancellation

Process Identifier: 1.3.3.14

Hierarchy Level: 3

Brief Description:

Manage Customer Order Cancellation business activity directs and controls the review, acceptance and processing of order cancellation requests in accordance to the order management policies and procedures.

Extended Description:

Manage Customer Order Cancellation business activity directs and controls the review, acceptance and processing of order cancellation requests in accordance to the order management policies and procedures.

Manage Customer Order Cancellation includes activities that enable review cancellation requests, approve or reject cancellation requests, and overseas any returns applicable to the review outcome of cancellation requests.

Manage Customer Order Cancellation Request

Process Identifier: 1.3.3.14.1

Hierarchy Level: 4

Brief Description:

Manage Customer Order Cancellation Request business activity controls activities that review, requests from customer to void an order.

Extended Description:

Manage Customer Order Cancellation Request business activity controls activities that enable assess customer order cancellation requests and any related impact to the business and customer.

Manage Customer Order Cancellation Request requires a Customer Order to have been accepted and includes negotiations with customer, mediation of cancellation reasons and effectively processing a request for onward action.

Manage Customer Order Cancellation Return

Process Identifier: 1.3.3.14.2

Hierarchy Level: 4

Brief Description:

Manage Customer Order Cancellation Return business activity controls activities that direct any returns associated to successfully accepted customer order cancellation request.

Extended Description:

Manage Customer Order Cancellation Return business activity controls activities that direct any returns associated to successfully accepted customer order cancellation request.

Manage Customer Order Cancellation Return will assure all financial and non-financial implications for the cancelled customer order do net off based on both the allocated effort from the organization's side, as well as the impact on future customer management concerns.

Manage Customer Order Completion

Process Identifier: 1.3.3.15

Hierarchy Level: 3

Brief Description:

Manage Customer Order Completion business activity controls activities to confirm that an order has been successfully delivered/shipped to the customer.

Extended Description:

Manage Customer Order Completion business activity controls activities to confirm that an order has been successfully delivered/shipped to the customer.

Manage Customer Order Completion includes activities that assure delivery/shipment is successfully processed by the business, and there is a confirmation that the customer order is in effectively in a delivery/shipping state.

Manage Customer Order Management Report

Process Identifier: 1.3.3.16

Hierarchy Level: 3

Brief Description:

Manage Customer Order Management Report business activity provides detailed account of Customer Order Management activities, representing state and status of customer orders across the customer order lifecycle.

Extended Description:

Manage Customer Order Management Report business activity provides detailed account of Customer Order Management activities, representing state and status of customer orders across the customer order lifecycle.

Manage Customer Order Management Report provides monitoring, tracking and customer order status updates/notification as needed to all stakeholders linked to the customer ordering and fulfillment activities.

Manage Customer Order Closure

Process Identifier: 1.3.3.17

Hierarchy Level: 3

Brief Description:

Manage Customer Order Closure business activity ensures that customer has confirmed the delivery of a completed customer order.

Extended Description:

Manage Customer Order Closure business activity ensures that customer has confirmed the delivery of a completed customer order.

Manage Customer Order Closure business activity closes-the-loop of between the Customer Order Completion process and the confirmation by the Customer. This business activity includes tasks to communicate and confirm delivery to customer; cancellation of any open line items in the customer order; and reports the customer order completion to related stakeholders.

Manage Customer Order Policy

Process Identifier: 1.3.3.18

Hierarchy Level: 3

Brief Description:

Manage Customer Order Policy business process controls all business and technical procedures that support customer order scenarios and activities.

Extended Description:

Manage Customer Order Policy business process controls all business and technical procedures that support customer order scenarios and activities.

Manage Customer Order Policy ensures customer order will be processed in a manner that is efficient and accurate based on implied levels of business agreement with customers.

Define Customer Order Policy

Process Identifier: 1.3.3.18.1

Hierarchy Level: 4

Brief Description:

Define Customer Order Policy business activity develops and establish the procedures, guidelines and practices that guide customer order management scenarios and activities.

Extended Description:

Define Customer Order Policy business activity develops and establish the procedures, guidelines and practices that guide customer order management scenarios and activities.

Define Customer Order Policy supports the lifecycle of an Order from a Customer by establishing the procedures and guidelines (including obligations of both the customer and the organization) for decisions taken while processing customer orders. These policy govern the order processing lifecycle.

Implement Customer Order Policy

Process Identifier: 1.3.3.18.2

Hierarchy Level: 4

Brief Description:

Implement Customer Order Policy business activity administer and enforces the guidelines and practices that support the realization of customer orders.

Extended Description:

Implement Customer Order Policy business activity administer and enforces the guidelines and practices that support the realization of customer orders.

Implement Customer Order Policy includes tasks that achieve the goals and objectives established for Customer Management, including communication, publication and educating the existence of the customer order policies.

Change Customer Order Policy

Process Identifier: 1.3.3.18.3

Hierarchy Level: 4

Brief Description:

Change Customer Order Policy business activity amends and remodels customer order guidelines and practices in support of the organization's customer management objectives.

Extended Description:

Change Customer Order Policy business activity amends and remodels customer order guidelines and practices in support of the organization's customer management objectives.

Change Customer Order Policy ensures that changes to customer order policies are done with all concerned parties included in the decision to change a policy. This includes the impact on customer management process, impact on the customer, and all associated "Customer Order Policy" stakeholders.

Customer Support Management

Process Identifier: 1.3.1

Hierarchy Level: 2

Brief Description:

Customer Support Management processes ensure the support capability is in place to allow the CRM Fulfillment, Assurance and Billing processes to operate effectively.

Extended Description:

Customer Support Management ensure the support capability is in place to allow the Customer Fulfillment, Assurance and Billing processes to operate effectively.

The responsibilities of these processes include, but are not limited to:

- Provision of sales customer process infrastructure
- Policy support and decision support knowledge for customers and customer interactions (including billing activities)
- Maintaining inventories to support the customer data required by the FAB and CRM OS&R processes

- Longer-term trend analysis on customer FAB processes in order to establish the extent to which enterprise targets for these processes are being achieved and/or the need for the processes to be modified.

These processes support the operational introduction of new processes and infrastructure to support new and/or enhanced customer management capabilities and are responsible for conducting operations readiness testing and acceptance. They develop the procedures for the specific Fulfillment, Assurance and Billing

processes and keep them up to date. After successful testing, these processes accept the new or enhanced process capabilities and manage a full-scale introduction for general availability.

This process was renamed in 23.5. old name was Customer Readiness & Support

This process was renamed in 24.0. old name was Customer Support Readiness

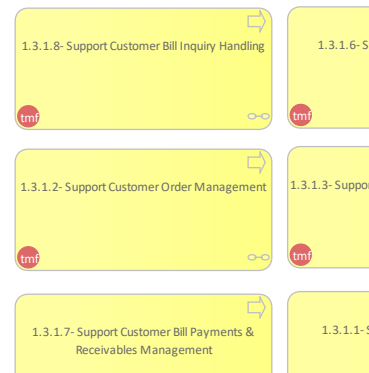

Figure 6: Customer Support Management Children

Support Customer Interface Management

Process Identifier: 1.3.1.1

Hierarchy Level: 3

Brief Description:

Ensure that all information, materials, systems and resources are available so that the Customer Interface Management processes can operate effectively, when a contact with a customer occurs.

Extended Description:

The purpose of the Support Customer Interface Management processes is to ensure that there is capability (for example, information, materials, systems and resource) so that the Customer Interface Management processes can operate effectively when a contact with a customer occurs. Examples are information on how to handle unusual requests based on temporary situations, systems needed to accept and track customer contacts, requests for the provisioning of additional resources where it has been identified that current levels will impact on timely contact handling.

These processes are responsible for implementing generic and specific changes to customer interfaces. This support could be in updating agent scripts, IVR announcements, Web pages, etc. Customer Interface Support processes keep up to date all information concerning customers.

These processes undertake trend analysis on customer contacts, e.g. type, frequency, duration, outcome.

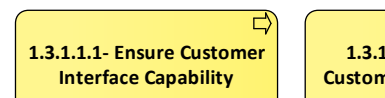

Figure 7: Support Customer Interface Management Children

Ensure Customer Interface Capability

Process Identifier: 1.3.1.1.1

Hierarchy Level: 4

Brief Description:

Ensure the information, systems, materials, and resources required to support Customer Interface processes.

Extended Description:

element Ensure that there is capability (for example, information, materials, systems and resource) so that the Customer Interface Management processes can operate effectively when a contact with a customer occurs. Examples are information on how to handle unusual requests based on temporary situations, systems needed to accept and track customer contacts, requests for the provisioning of additional resources where it has been identified that current levels will impact on timely contact handling. These processes are responsible for implementing generic and specific changes to customer interfaces. This support includes localization support and personalization support, and it could be in updating agent scripts, IVR announcements, Web pages, etc. Customer Interface Support processes keep up to date all information concerning customers.

Undertake Customer Contacts Trend Analysis

Process Identifier: 1.3.1.1.2

Hierarchy Level: 4

Brief Description:

Undertake trend analysis on customer contacts, e.g. type, frequency, duration, outcome.

Extended Description:

Not used for this process element

Support Customer Order Management

Process Identifier: 1.3.1.2

Hierarchy Level: 3

Brief Description:

Ensure that new and/or modified Order Management related infrastructure is deployed effectively, and to ensure that Order Management processes can operate effectively.

Extended Description:

The purpose of the Support Order Management processes is twofold – to ensure that new and/or modified Order Management related infrastructure is deployed effectively, and to ensure that Order Management processes can operate effectively.

Examples are information on how to process orders for specific product offerings, information needed to carry out designs, materials needed to confirm customer order requests, systems needed to validate product offering availability.

The responsibilities of these processes include, but are not limited to:

- forecasting at an operational level customer order Management volume requirements;
- the capacity planning associated with the deployment of new and/or modified customer order Management infrastructure;
- establishment and monitoring of organizational arrangements to support deployment and operation of new and/or modified customer order Management infrastructure;
- creation, deployment, modification and/or upgrading of customer order Management infrastructure deployment support tools (including Customer Inventory and Product Offer Inventory) and processes for new and/or modified customer order Management infrastructure;

- authoring, reviewing and approving operational procedures developed by Marketing & Offer Management processes prior to customer order Management infrastructure deployment;
- the testing and acceptance of new and/or modified customer order Management infrastructure as part of the handover procedure from the Marketing & Offer Management processes to Operations;
- detecting customer order Management infrastructure operational limitations and/or deployment incompatibilities and providing requirements to address these aspects to Marketing & Offer Management processes;
- co-ordination and roll-out, in accordance with approved plans, of the approved new and/or modified customer order Management infrastructure;
- monitoring capacity utilization of deployed customer order Management infrastructure to provide early detection of potential customer order Management infrastructure shortfalls;
- reconfiguration and re-arrangement of under-utilized deployed customer order Management infrastructure;
- managing recovery and/or removal of obsolete or unviable customer order Management infrastructure;
- reporting on deployed customer order Management infrastructure capacity;
- Tracking and monitoring of the customer order Management infrastructure deployment processes and costs (including where customer order Management infrastructure is deployed and managed by third parties),
- reporting on the capability of the customer order Management infrastructure deployment processes
- establishing and managing customer order Management notification facilities and lists to support the Order Management notification and reporting processes

The processes undertake trend analysis on order Management, such as time taken to complete a customer order, frequency and type of Order Management process issues involved, and canceled orders.

This process was renamed old name was Support Customer Order Handling

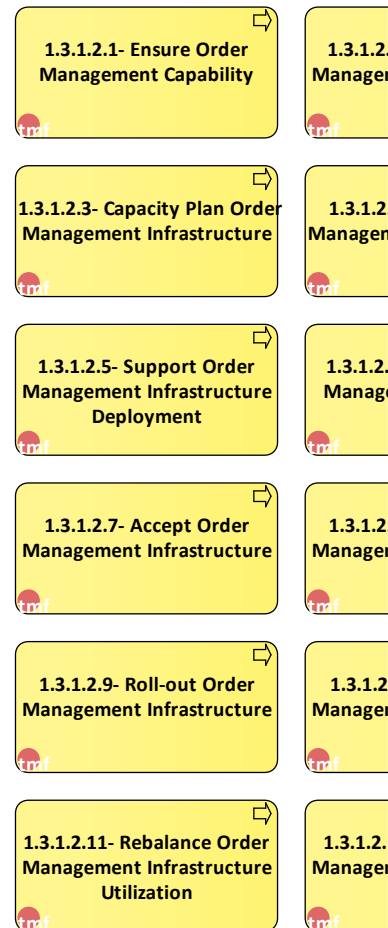

Figure 8: Support Customer Order Management Children

Ensure Order Management Capability

Process Identifier: 1.3.1.2.1

Hierarchy Level: 4

Brief Description:

Ensure the information, systems, materials, and resources required to support Order Management processes.

Extended Description:

Ensure that there is capability (for example, information, materials, systems and resources) so that the Order Management processes can operate effectively. Examples are materials needed to confirm customer order requests and systems needed to validate product offering availability.

Forecast Order Management Requirements

Process Identifier: 1.3.1.2.2

Hierarchy Level: 4

Brief Description:

Forecasting at an operational level customer order Management volume requirements.

Extended Description:

Not used for this process element

Capacity Plan Order Management Infrastructure

Process Identifier: 1.3.1.2.3

Hierarchy Level: 4

Brief Description:

Capacity planning associated with the deployment of new and/or modified customer order Management infrastructure.

Extended Description:

Not used for this process element

Manage Order Management Organizational Changes

Process Identifier: 1.3.1.2.4

Hierarchy Level: 4

Brief Description:

Establishment and monitoring of organizational arrangements to support deployment and operation of new and/or modified customer order Management infrastructure.

Extended Description:

Not used for this process element

Support Order Management Infrastructure Deployment

Process Identifier: 1.3.1.2.5

Hierarchy Level: 4

Brief Description:

Support the creation, deployment, modification, and upgrade of order management infrastructure and supporting tools.

Extended Description:

Creation, deployment, modification and/or upgrading of customer order Management infrastructure deployment support tools (including Customer Inventory and Product Offer Inventory) and processes for new and/or modified customer order Management infrastructure;

Approve Order Management Procedures

Process Identifier: 1.3.1.2.6

Hierarchy Level: 4

Brief Description:

Authoring, reviewing and approving operational procedures developed by Marketing & Offer Management processes prior to customer order Management infrastructure deployment.

Extended Description:

Not used for this process element

Accept Order Management Infrastructure

Process Identifier: 1.3.1.2.7

Hierarchy Level: 4

Brief Description:

Testing and acceptance of new and/or modified customer order Management infrastructure as part of the handover procedure from the Marketing & Offer Management processes to Operations.

Extended Description:

Not used for this process element

Address Order Management infrastructure Issues

Process Identifier: 1.3.1.2.8

Hierarchy Level: 4

Brief Description:

Detecting customer order Management infrastructure operational limitations and/or deployment incompatibilities and providing requirements to address these aspects to Marketing & Offer Management processes.

Extended Description:

Not used for this process element

Roll-out Order Management Infrastructure

Process Identifier: 1.3.1.2.9

Hierarchy Level: 4

Brief Description:

Co-ordination and roll-out, in accordance with approved plans, of the approved new and/or modified customer order Management infrastructure.

Extended Description:

Not used for this process element

Detect Order Management infrastructure Shortfalls

Process Identifier: 1.3.1.2.10

Hierarchy Level: 4

Brief Description:

Monitoring capacity utilization of deployed customer order Management infrastructure to provide early detection of potential customer order Management infrastructure shortfalls.

Extended Description:

Not used for this process element

Rebalance Order Management Infrastructure Utilization

Process Identifier: 1.3.1.2.11

Hierarchy Level: 4

Brief Description:

Reconfiguration and re-arrangement of under-utilized deployed customer order Management infrastructure.

Extended Description:

Not used for this process element

Remove Order Management Infrastructure

Process Identifier: 1.3.1.2.12

Hierarchy Level: 4

Brief Description:

Managing recovery and/or removal of obsolete or unviable customer order Management infrastructure.

Extended Description:

Not used for this process element

Report Order Management Infrastructure Capacity

Process Identifier: 1.3.1.2.13

Hierarchy Level: 4

Brief Description:

Reporting on deployed customer order Management infrastructure capacity.

Extended Description:

Not used for this process element

Track Third-Party Order Management Infrastructure Deployment

Process Identifier: 1.3.1.2.14

Hierarchy Level: 4

Brief Description:

Tracking and monitoring of the customer order Management infrastructure deployment processes and costs (including where customer order Management infrastructure is deployed and managed by third parties).

Extended Description:

Not used for this process element

Report Order Management Infrastructure Deployment Process Capability

Process Identifier: 1.3.1.2.15

Hierarchy Level: 4

Brief Description:

Reporting on the capability of the customer order Management infrastructure deployment processes.

Extended Description:

Not used for this process element

Manage Order Management Notification

Process Identifier: 1.3.1.2.16

Hierarchy Level: 4

Brief Description:

Establishing and managing customer order Management notification facilities and lists to support the Order Management notification and reporting processes.

Extended Description:

Not used for this process element

Undertake Order Management Trend Analysis

Process Identifier: 1.3.1.2.17

Hierarchy Level: 4

Brief Description:

Undertake trend analysis on order Management, such as time taken to complete a customer order, frequency and type of Order Management process issues involved, and canceled orders.

Extended Description:

Not used for this process element

Support Customer Problem Management

Process Identifier: 1.3.1.3

Hierarchy Level: 3

Brief Description:

Assist Problem Management processes by proactively undertaking statistically driven preventative and scheduled purchased product offering maintenance activities and monitoring, managing and reporting on the capability of the Problem Handling processes.

Extended Description:

The responsibilities of the Support Customer Problem Management processes are twofold - assist Problem Management processes by proactively undertaking statistically driven preventative and scheduled purchased product offering maintenance activities and monitoring, managing and reporting on the capability of the Problem Management processes.

These processes are responsible for ensuring that the purchased product offerings are working effectively and efficiently.

Responsibilities of these processes include, but are not limited to:

- Extracting and analyzing, including undertaking trend analysis, historical and current customer problem reports and performance reports to identify potential customer purchased product offerings requiring proactive maintenance and/or replacement;
- Requesting scheduling of additional customer purchased product offering data collection to assist in the analysis activity;
- Requesting scheduling of customer purchased product offering performance testing to assist in analysis activity;
- Developing and managing customer purchased product offering proactive maintenance programs;
- Requesting customer provisioning activity to prevent anticipated customer problems associated with purchased product offerings identified in the analysis activities;
- Reporting outcomes of trend analysis to Market & Offer Management processes to influence new and/or modified customer product offering development;
- Tracking and monitoring of the Problem Management processes and associated costs (including where customer infrastructure is deployed and managed by third parties), and reporting on the capability of the Problem Management processes
- Establishing and managing customer problem notification facilities and lists to support the Problem Management notification and reporting processes

These processes undertake trend analysis on Problem Management

Support Customer Problem Handling

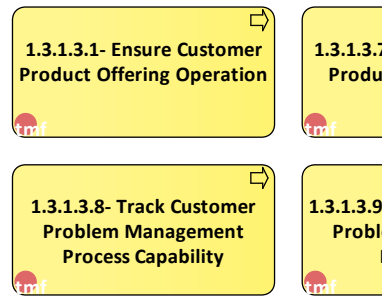

Figure 9: Support Customer Problem Management Children

Ensure Customer Product Offering Operation

Process Identifier: 1.3.1.3.1

Hierarchy Level: 4

Brief Description:

Ensure that the product offerings purchased by a Customer are working effectively and efficiently.

Extended Description:

Not used for this process element

Report Customer Product Offering Trend Analysis

Process Identifier: 1.3.1.3.7

Hierarchy Level: 4

Brief Description:

Reporting outcomes of trend analysis to Market & Offer Management processes to influence new and/or modified customer product offering development.

Extended Description:

Not used for this process element

Track Customer Problem Management Process Capability

Process Identifier: 1.3.1.3.8

Hierarchy Level: 4

Brief Description:

Track customer problem management process performance, costs, and capability to support effective problem handling.

Extended Description:

Tracking and monitoring of the Customer Problem Management processes and associated costs (including where customer infrastructure is deployed and managed by third parties), and reporting on the capability of the Customer Problem Handling processes

Manage Customer Problem Management Notification

Process Identifier: 1.3.1.3.9

Hierarchy Level: 4

Brief Description:

Establishing and managing customer problem notification facilities and lists to support the Problem Management notification and reporting processes.

Extended Description:

Not used for this process element

Undertake Customer Problem Management Trend Analysis

Process Identifier: 1.3.1.3.10

Hierarchy Level: 4

Brief Description:

These processes undertake trend analysis on Customer Problem Management.

Extended Description:

Not used for this process element

Support Retention & Loyalty

Process Identifier: 1.3.1.4

Hierarchy Level: 3

Brief Description:

Ensure that all information, materials, systems and resources are available so that the Retention & Loyalty processes can be completed without delay, when a request is received from a customer.

Extended Description:

The purpose of the Support Retention & Loyalty processes is to make sure that there is capability (for example, information, materials, systems and resources) so that the Retention & Loyalty processes can operate effectively. Examples are information on current requests for analysis and collection of customer profile information, materials needed to analyze customer retention and loyalty information, systems needed to analyze customer retention and loyalty information, requests for the provisioning of additional resources where it has been identified that current levels will impact on timely retention and loyalty information collection and delivery.

These processes undertake trend analysis on retention and loyalty, including customer acquisitions and churn, and the effectiveness of loyalty schemes.

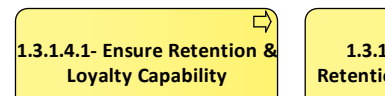

Figure 10: Support Retention & Loyalty Children

Ensure Retention & Loyalty Capability

Process Identifier: 1.3.1.4.1

Hierarchy Level: 4

Brief Description:

Ensure the information, systems, materials, and resources required to support Retention & Loyalty processes.

Extended Description:

Ensure that there is capability (for example, information, materials, systems and resources) so that the Retention & Loyalty processes can operate effectively. Examples are information on current requests for analysis and collection of customer profile information, materials needed to analyze customer retention and

loyalty information, systems needed to analyze customer retention and loyalty information, requests for the provisioning of additional resources where it has been identified that current levels will impact on timely retention and loyalty information collection and delivery.

Undertake Retention & Loyalty Trend Analysis

Process Identifier: 1.3.1.4.2

Hierarchy Level: 4

Brief Description:

Undertake trend analysis on retention and loyalty, including customer acquisitions and churn, and the effectiveness of loyalty schemes.

Extended Description:

Not used for this process element

Support Customer Bill Invoice Management

Process Identifier: 1.3.1.6

Hierarchy Level: 3

Brief Description:

Ensure that all information, materials, systems and resources are available so that the Customer Bill Invoice Management processes can be completed without delay.

Extended Description:

Not used for this process element

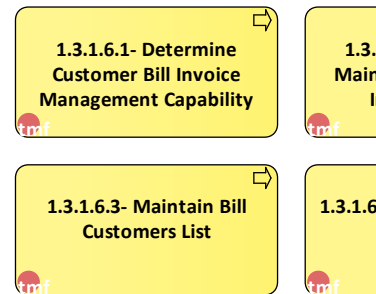

Figure 11: Support Customer Bill Invoice Management Children

Determine Customer Bill Invoice Management Capability

Process Identifier: 1.3.1.6.1

Hierarchy Level: 4

Brief Description:

Make sure that there is capability so that the Customer Bill Invoice Management processes can operate effectively.

Extended Description:

Not used for this process element

Establish & Maintain Customer Bill Invoice Format

Process Identifier: 1.3.1.6.2

Hierarchy Level: 4

Brief Description:

Establish and maintain the customer bill invoice formats, and any interaction with specific customers to modify the format.

Extended Description:

Not used for this process element

Maintain Bill Customers List

Process Identifier: 1.3.1.6.3

Hierarchy Level: 4

Brief Description:

Maintain lists of customers who are eligible for receiving bills.

Extended Description:

Not used for this process element

Define Customer Billing Cycle

Process Identifier: 1.3.1.6.4

Hierarchy Level: 4

Brief Description:

Define the Customer billing cycles and respective dates according to cash flow needs as established by Financial Management processes.

Extended Description:

Not used for this process element

Analyze Customer Billing Trend

Process Identifier: 1.3.1.6.5

Hierarchy Level: 4

Brief Description:

Undertake trend analysis on invoice generation, production and distribution issues.

Extended Description:

Not used for this process element.

Design & Develop Customer Invoicing Process

Process Identifier: 1.3.1.6.6

Hierarchy Level: 4

Brief Description:

Design and develop the Service Provider's Customer invoicing process.

Extended Description:

Not used for this process element.

Support Customer Bill Payments & Receivables Management

Process Identifier: 1.3.1.7

Hierarchy Level: 3

Brief Description:

Ensure that all information and systems are available so that the Customer Bill Payments & Receivables Management processes can be completed without delay.

Extended Description:

Not used for this process element.

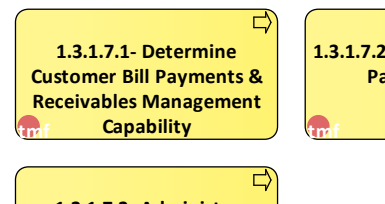

Figure 12: Support Customer Bill Payments & Receivables Management Children

Determine Customer Bill Payments & Receivables Management Capability

Process Identifier: 1.3.1.7.1

Hierarchy Level: 4

Brief Description:

Make sure that there is capability that the Bill Payments & Receivables Management processes can operate effectively.

Extended Description:

Not used for this process element.

Analyze Customer Payment Trend

Process Identifier: 1.3.1.7.2

Hierarchy Level: 4

Brief Description:

Analyze trend on customer billing debts, alerting when pre-determined thresholds are tended to be exceeded.

Extended Description:

Not used for this process element.

Administer Customer Payment Processes

Process Identifier: 1.3.1.7.3

Hierarchy Level: 4

Brief Description:

Establish, manage and, if required, operate the various payment processes that the Service Provider chooses to establish

Extended Description:

Not used for this process element.

Support Customer Bill Inquiry Handling

Process Identifier: 1.3.1.8

Hierarchy Level: 3

Brief Description:

Ensure that all information, systems and resources are available so that the Customer Bill Inquiry Handling processes can be completed without delay.

Extended Description:

The purpose of the Support Customer Bill Inquiry Handling processes is to make sure that there is capability (for example, information, systems and resources) so that the Customer Bill Inquiry Handling processes can operate effectively. Examples are information on how to respond to current billing issues being raised by customers, systems needed to create customer bill inquiry and complaint reports, requests for provisioning of additional resources where it has been identified that current levels will impact on timely billing complaint handling.

These processes are responsible for managing billing policies associated with customer billing dispute settlements.

These processes undertake trend analysis on billing queries and complaints.

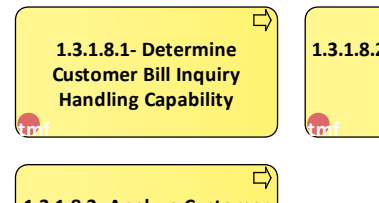

Figure 13: Support Customer Bill Inquiry Handling Children

Determine Customer Bill Inquiry Handling Capability

Process Identifier: 1.3.1.8.1

Hierarchy Level: 4

Brief Description:

Make sure that there is capability so that the Customer Bill Inquiry Handling processes can operate effectively.

Extended Description:

Analyze Customer Bill Inquiry Trend

Process Identifier: 1.3.1.8.3

Hierarchy Level: 4

Brief Description:

Undertake trend analysis on Customer billing queries and complaints.

Extended Description:

Not used for this process element.

Support Customer QoS/SLA

Process Identifier: 1.3.1.12

Hierarchy Level: 3

Brief Description:

Support Customer QoS/SLA Management processes by proactively monitoring and assessing the performance of purchased product offerings as a group against agreed QoS/SLA parameters, and monitoring, managing and reporting on the capability of the Customer QoS.

Extended Description:

The responsibilities of the Support Customer QoS/SLA Management processes are twofold - support Customer QoS/SLA Management processes by proactively monitoring and assessing the performance of purchased product offerings as a group against agreed QoS/SLA parameters, and monitoring, managing and reporting on the capability of the Customer QoS/SLA Management processes.

Proactive management is undertaken using a range of performance parameters, whether technical, time, economic or process related.

The responsibilities of the processes include, but are not limited to:

- Undertaking proactive monitoring regimes of groups of similar purchased product offerings as required to ensure ongoing performance within agreed parameters over time;
- Developing and maintaining, in the product offering repository, acceptable and/or commercially agreed performance threshold standards for purchased product offerings to support the Customer QoS/SLA Management processes;
- Undertaking trend analysis, and producing reports, of the QoS performance of groups of like purchased product offerings to identify any longer term deterioration;
- Monitoring and analyzing the purchased product offering performance analyses produced by the Customer QoS/SLA Management processes to identify problems that may be applicable to purchased product offerings as a whole;
- Aggregate analysis of QoS performance across groups of customers or aggregate analysis of SLA types;
- Sourcing details relating to purchased product offerings performance and analysis from the product offering inventory to assist in the development of trend analyses;
- Logging the results of the analysis into the product offering inventory repository;
- Establishing and managing facilities to inform customers of, and negotiate agreement for, planned service outages;
- Tracking and monitoring of the Customer QoS/SLA Management processes and associated costs, and reporting on the capability of the Customer QoS/SLA Management processes;

- Establishing and managing customer notification facilities and lists to support the Customer QoS/SLA Management notification and reporting processes
- Supporting the Support Customer QoS/SLA Management process.

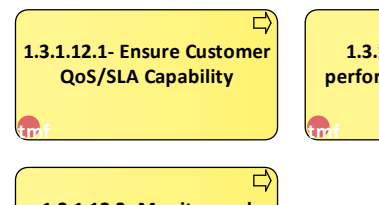

Figure 14: Support Customer QoS/SLA Children

Ensure Customer QoS/SLA Capability

Process Identifier: 1.3.1.12.1

Hierarchy Level: 4

Brief Description:

Supporting the Support Customer QoS/SLA Management process.

Extended Description:

Not used for this process element

Proactive performance Monitoring

Process Identifier: 1.3.1.12.2

Hierarchy Level: 4

Brief Description:

Proactively monitor and assess the performance of purchased product offerings.

Extended Description:

Not used for this process element

Monitor and Report on QoS/SLA capability

Process Identifier: 1.3.1.12.3

Hierarchy Level: 4

Brief Description:

Monitor, and report on the capability of the Customer QoS/SLA Management processes.

Extended Description:

Not used for this process element

Customer Strategy Management

Process Identifier: 1.3.17

Hierarchy Level: 2

Brief Description:

Customer Strategy Management defines and oversees the distinctive value and experience the business will deliver to customers, along with offerings, channels, operating models, and capabilities needed to implement them.

Extended Description:

Customer Strategy Management defines and oversees the distinctive value and experience the business will deliver to customers, along with offerings, channels, operating models, and capabilities needed to implement them.

Customer Strategy Management ensures understanding of customer needs and expectations, and developing strategies to meet those needs. In addition, it develops policies for engaging with existing and potential customers in support of market, sales, and operations strategies

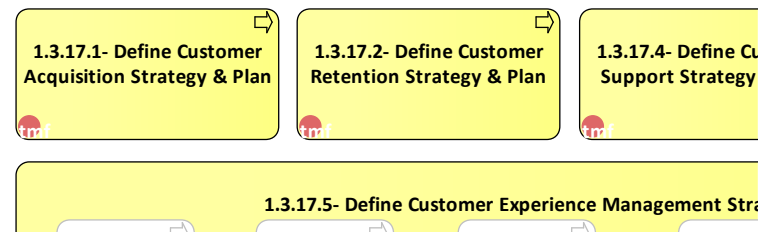

Figure 15: Customer Strategy Management Children

Define Customer Acquisition Strategy & Plan

Process Identifier: 1.3.17.1

Hierarchy Level: 3

Brief Description:

Define Customer Acquisition Strategy & Plan processes enable establish actions that create a systematic, and sustainable acquisition strategy for customers, and includes evolving customer acquisition based on new trends and changes.

Extended Description:

Define Customer Acquisition Strategy & Plan processes establish the activities that manage the enterprises preferences for customers, and processes for bringing new customers or clients to the business.

The goal of this set of processes is to create a systematic, sustainable acquisition strategy that can evolve with new trends and changes. It allows the business to: Make money to meet costs, and reinvest in growth, and show evidence of traction for outside parties such as investors, partners, and influencers.

This process was named - Customer Acquisition Strategy & Planning

Define Customer Retention Strategy & Plan

Process Identifier: 1.3.17.2

Hierarchy Level: 3

Brief Description:

Define Customer Retention Strategy & Plan processes enable develop the strategic management plan following a set of activities that keep customers the organization has invested into acquiring.

Extended Description:

Define Customer Retention Strategy & Plan defines the activities that enable the organization to provide and extract more value from existing customer base.

The set of processes enable develop a strategic management plan with a set of actions that keeps customers the organization has invested into acquiring.

The strategy and plan help deliver services that are consistent with the organization value proposition and brand. This includes developing programs to increase customer loyalty and decreasing turnover.

This process was named Customer Retention Strategy & Planning

Define Customer Engagement Strategy & Plan

Process Identifier: 1.3.17.3

Hierarchy Level: 3

Brief Description:

Define Customer Engagement Strategy & Plan processes plan the delivery of a sustained or increasing customer satisfaction by having more positive interactions with customers and the outcomes are more fitted to their needs.

Extended Description:

The set of processes to plan the delivery of a sustained or increasing customer satisfaction by having more positive interactions with customers.

It can be through any channel, from in person, to online, to over the phone. Great strategies take customer engagement from reactive to proactive.

This process was named Customer Engagement Strategy & Planning

Define Customer Support Strategy & Plan

Process Identifier: 1.3.17.4

Hierarchy Level: 3

Brief Description:

Define Customer Support Strategy & Plan processes enable establish the strategic management activities and plans that handle customer support and customer service interactions in a way that creates consistent customer experiences, while enabling the organization to examine customers perception and expectations across all journeys.

Extended Description:

Define Customer Support Strategy & Plan processes ensures that a Customer Service Strategy is a thorough plan to handle customer interactions. It lets the organization provide a consistent customer experience throughout the customer journey.

A customer support plan establishes methods and techniques to deeply examine customers' perceptions and expectations of the organization, and guides the company through the process of bringing its customer service activities in line with customers' needs.

Improved customer experience results in a more loyal customer base. Loyal customers buy more often, spend more, and refer their friends and family to the organization either through social structures.

This process was Customer Support Strategy & Planning

Define Customer Experience Management Strategy & Plan

Process Identifier: 1.3.17.5

Hierarchy Level: 3

Brief Description:

This process involve establishing a customer experience management strategy and plan, defining goals to maximize business revenue, customer experience performance measures, policies and standards along with methods, processes and tools.

Extended Description:

Define Customer Experience Management Strategy & Plan processes are a set of processes which enable the development of a strategy and plan for how customer experience management would be incorporated into the whole organization. The planning processes will cover what are the goals related to customer experience and what needs to be done to achieve those goals and how and when the goal achievement should be measured.

Define Customer Experience Management Strategy & Plan processes involve establishing a customer experience management strategy and plan, defining goals, measures, policies and standards along with methods, processes and tools. This process also periodically analyzes CEM performance to drive brand loyalty, maximize business revenue and make any necessary improvements, including adjustments to the strategy. CEM involves integration of technology, orchestration of business models, brand management and executive commitment.

This process was named: Customer Support Strategy & Planning

Establish Goals and Measures for Customer Experience

Process Identifier: 1.3.17.5.1

Hierarchy Level: 4

Brief Description:

The purpose of this process is to define the quality requirements of the customer experience; as well in quality of experience as in perception of the delivered experience

Extended Description:

The purpose of this process is to define the quality requirements of the customer experience in terms that can be objectively verified by decomposing the quality attributes into single, measurable attributes. Based on established goals, this process determines current achievement levels as a baseline for comparing future achievement levels.

Define Policies and Standards for CEM

Process Identifier: 1.3.17.5.2

Hierarchy Level: 4

Brief Description:

Define the operating principles of CEM to guide the organization's business, legal and regulatory requirements, employee conduct, information security, and financial integrity, amongst other topics.

Extended Description:

Define the operating principles of CEM to guide the organization business, legal and regulatory requirements, employee conduct, information security, and financial integrity, amongst other topics. There may be a single policy covering all of these areas in broad terms, or separate policies for each one. A well-written CEM policy will provide stakeholders and employees with an operating framework that supports the goals of CEM. CEM policies are written and approved by the executives in the marketing or CRM department. They are mandatory for all employees and contingent staff.

Standards provide the rules and controls that will help enforce CEM policies. They are what all employees must do to adhere to the company CEM strategy and policies.

Standards may be company specific and even though they may be internally developed, they are typically based on industry best practices. Following company standards is mandatory.

Define Methods, Processes and Tools for CEM

Process Identifier: 1.3.17.5.3

Hierarchy Level: 4

Brief Description:

Various methods, processes, tools and techniques may be used to manage overall Customer Experience across the customer lifecycle.

Extended Description:

Various methods, processes, tools and techniques may be used to manage overall Customer Experience across the customer lifecycle. The development of a strategy is recommended that reflects the understanding and level of formality required by the enterprise's stakeholders. CEM content will be highly dependent on the scale, sophistication, and culture of both the stakeholders and the CEM leadership within the organization.

The strategy for CEM should encompass the definition of management methods and techniques, business modeling, detailed infrastructure modeling, supporting software, and repository management as well as more formal architecture tools. The strategy for the implementation of processes and tools may be based on a combination of common office software and a customized deployment of specialist management tools for CEM.

Analyze CEM performance, brand loyalty and revenue targets

Process Identifier: 1.3.17.5.4

Hierarchy Level: 4

Brief Description:

Collect and analyze relevant CEM performance data.

Extended Description:

Collect and analyze relevant CEM performance data. The assessment of performance should follow the guidelines defined by the CEM process which can serve as a template for specific applications of Performance Assessment that apply to CEM.

Customer Relationship Management

Process Identifier: 1.3.4

Hierarchy Level: 2

Brief Description:

Manage the relationship of the Customer and the enterprise.

Extended Description:

The purpose of this process is to manage the relationship of the Customer and the enterprise. This process may be triggered at very early stages of the customer lifecycle (for example, for leads and prospects which are potential customers) and until the termination of the customer relationship between the enterprise and the customer. This processes is in charge of managing the customer relationship with the enterprise and of the customer profile. This process ensure that each customer gets a unique identity and that customer identities are not duplicated in the enterprise. This process is also in charge of evaluating the customer value, the customer risk (credit risk, fraud risk, influence risk, and churn risk) of validating the customer satisfaction.

The customer data is managed by the Customer Information Management process.

Was previously named Customer Relationship Management.

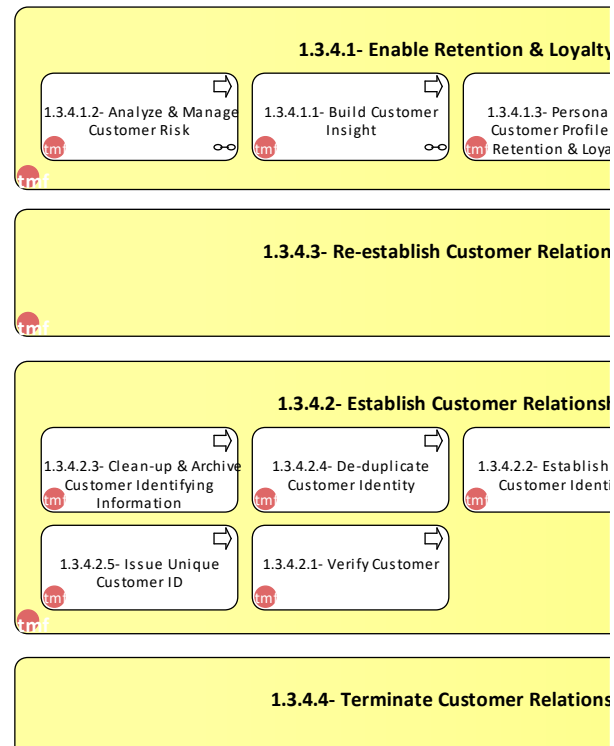

Figure 16: Customer Relationship Management Children

Enable Retention & Loyalty

Process Identifier: 1.3.4.1

Hierarchy Level: 3

Brief Description:

Manage all functionalities related to the retention of acquired customers, and the use of loyalty schemes in the potential acquisition of customers.

Extended Description:

Retention & Loyalty processes deal with all functionalities related to the retention of acquired customers, and the use of loyalty schemes in the potential acquisition of customers. They establish a complete understanding of the needs of the customer, a determination of the value of the customer to the enterprise, determination of opportunities and risks for specific customers, etc. These processes collect and analyze data from all enterprise and customer contact.

Build Customer Insight

Process Identifier: 1.3.4.1.1

Hierarchy Level: 4

Brief Description:

Ensure that Service Provider and the customer feel confident that the relationship is founded on up-to-date, accurate and legally compliant information.

Extended Description:

The purpose of this process is to ensure that Service Provider and the customer feel confident that the relationship is founded on up-to-date, accurate and legally compliant information. The Service Provider will incorporate into the customer profile, all relevant information gathered through all contacts with the customer (usage pattern, demographics, life stage, household, community of interest, business direction). Customer and market information from other sources may be gathered, which will build a better understanding of the customer. Customer Information must be made available to any process that needs to access it. This customer information will be used to continually refine the means and style of interaction, and the solution sets and customer experience offered.

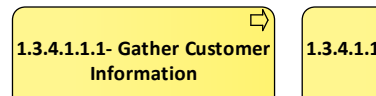

Figure 17: Build Customer Insight Children

Gather Customer Information

Process Identifier: 1.3.4.1.1.1

Hierarchy Level: 5

Brief Description:

Gather and maintain customer information from interactions and other sources to support an accurate and compliant customer profile.

Extended Description:

Incorporate into the customer profile, all relevant information gathered through all contacts with the customer (usage pattern, demographics, life stage, household, community of interest, business direction). Customer and market information from other sources may be gathered, which will build a better understanding of the customer. The purpose of this process is to ensure that Service Provider and the customer feel confident that the relationship is founded on up-to-date, accurate and legally compliant information.

Report Customer Information

Process Identifier: 1.3.4.1.1.2

Hierarchy Level: 5

Brief Description:

Makes available Customer Information to any process that needs to access it. This customer information will be used to continually refine the means and style of interaction, and the solution sets and customer experience offered.

Extended Description:

Not used for this process element

Analyze & Manage Customer Risk

Process Identifier: 1.3.4.1.2

Hierarchy Level: 4

Brief Description:

Ensure that a consistent customer risk assessment is used across the Enterprise and ensure that risk analysis is based on information collected from all processes.

Extended Description:

The purpose of this process is to ensure that risk analysis is based on information collected from all processes and that consistent risk assessment is used across the Enterprise. Its purpose is also to track and improve Operations, target and win the right customers and improves Sales Conversion rate. It determines the credit risk, fraud risk, influence risk, and churn risk. It identifies treatments to manage these risks and focuses on using customer information.

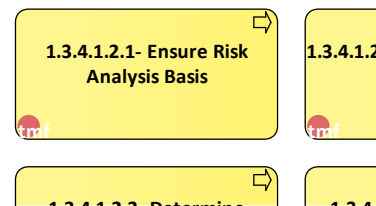

Figure 18: Analyze & Manage Customer Risk Children

Ensure Risk Analysis Basis

Process Identifier: 1.3.4.1.2.1

Hierarchy Level: 5

Brief Description:

Ensure that risk analysis is based on information collected from all processes.

Identify Risk Management Treatment

Process Identifier: 1.3.4.1.2.4

Hierarchy Level: 5

Brief Description:

Identifies treatments to manage these risks and focuses on using customer information. The purpose is to track and improve Operations, target and win the right customers and improves Sales Conversion rate.

Extended Description:

Not used for this process element

Personalize Customer Profile for Retention & Loyalty

Process Identifier: 1.3.4.1.3

Hierarchy Level: 4

Brief Description:

Provide the personalization opportunities for customers that will encourage them not to switch to another Service Provider.

Extended Description:

The purpose of this process is to provide the personalization opportunities for customers that will encourage them not to switch to another Service Provider. Personalization allows delivery of services that more closely match the customer's need. Collection of Personalization Information also discourages switching since the customer would have to build up the same Personalized experience with the next Service Provider.

Business Planning is essential to allow the Service Provider to match the customer's future retention needs and potential acquisition needs, rather than just continuing with today's known needs.

Loyalty schemes allow tangible benefits to be offered to good customers in a mass-market.

The process aims to ensure that all information is gathered and used to make the best decisions to retain those customers the Service Provider wants to retain, heighten satisfaction and maintain profitability.

This process provides a source of data for performing loyalty and retention marketing campaigns, for retaining existing customers, promoting customer loyalty, winning back customers who have left. It utilizes predictive modeling software to analyze an account, and to return relevant scores, such as: churn score, up-sell score, cross-sell score, bad debt score and customer lifetime value score. Moreover it utilizes scores for customer analysis and marketing campaign purposes.

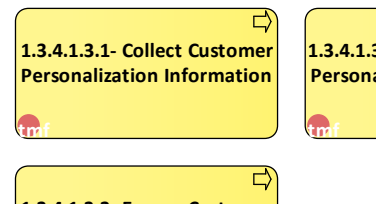

Figure 19: Personalize Customer Profile for Retention & Loyalty Children

Collect Customer Personalization Information

Process Identifier: 1.3.4.1.3.1

Hierarchy Level: 5

Brief Description:

Collects Personalization Information about customers. This also discourages switching since the customer would have to build up the same Personalized experience with the next Service Provider.

Extended Description:

Not used for this process element

Provide Customer Personalization Information

Process Identifier: 1.3.4.1.3.2

Hierarchy Level: 5

Brief Description:

Provide customer analysis scores and related information to support personalization, loyalty, and retention activities.

Extended Description:

Provides a source of data for performing loyalty and retention marketing campaigns, for retaining existing customers, promoting customer loyalty, winning back customers who have left. It utilizes predictive modeling software to analyze an account, and to return relevant scores, such as: churn score, up-sell score, cross-sell score, bad debt score and customer lifetime value score. Moreover it utilizes scores for customer analysis and marketing campaign purposes.

Ensure Customer Personalization Opportunities

Process Identifier: 1.3.4.1.3.3

Hierarchy Level: 5

Brief Description:

Ensure customer personalization opportunities are identified and used to improve retention, satisfaction, and profitability.

Extended Description:

Provides the personalization opportunities for customers that will encourage them not to switch to another Service Provider. Personalization allows delivery of services that more closely match the customer's need. - Business Planning is essential to allow the Service Provider to match the customer's future retention needs and potential acquisition needs, rather than just continuing with today's known needs.

-Loyalty schemes allow tangible benefits to be offered to good customers in a mass-market.

- The process aims to ensure that all information is gathered and used to make the best decisions to retain those customers the Service Provider wants to retain, heighten satisfaction and maintain profitability.

Validate Customer Satisfaction

Process Identifier: 1.3.4.1.4

Hierarchy Level: 4

Brief Description:

Validate that predicted/expected value is delivered by the solution and initialize the after-sales processes (billing and assurance).

Extended Description:

The purpose of this process is to validate that predicted/expected value is delivered by the solution and that the after-sales processes (billing and assurance) are initialized. It validates that the customer is capable of realizing maximum value from the operation or use of the solution and that intense Provider involvement is no longer needed to manage the solution.

This process ensures that the customer is satisfied that the solution that was actually delivered meets original or updated expectations and agreements and that the solution is operable by the customer.

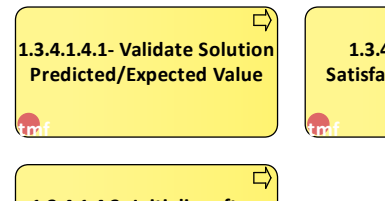

Figure 20: Validate Customer Satisfaction Children

Validate Solution Predicted/Expected Value

Process Identifier: 1.3.4.1.4.1

Hierarchy Level: 5

Brief Description:

Validate that the solution is delivering the expected value and that the customer can realize its intended benefits.

Extended Description:

Validate that predicted/expected value is delivered by the solution. It validates that the customer is capable of realizing maximum value from the operation or use of the solution and that intense Provider involvement is no longer needed to manage the solution.

Validate Satisfaction of Customer

Process Identifier: 1.3.4.1.4.2

Hierarchy Level: 5

Brief Description:

This process ensures that the customer is satisfied that the solution that was actually delivered meets original or updated expectations and agreements and that the solution is operable by the customer.

Extended Description:

Not used for this process element

Initialize after-sales processes

Process Identifier: 1.3.4.1.4.3

Hierarchy Level: 5

Brief Description:

Initialize after-sales processes (billing and assurance).

Extended Description:

Not used for this process element

Establish Customer Relationship

Process Identifier: 1.3.4.2

Hierarchy Level: 3

Brief Description:

Verify the customer identity and manage the customer identity across the Enterprise.

Extended Description:

The purpose of this process is to verify that the customer is who they claim they are, To ensure only one customer identity exists across the Enterprise, which can be referenced across the whole Enterprise and allows the customer to quickly and easily identify himself, to establish and verify the Identity and to issue a unique Identifier and Authentication information. Before establishing an identity for a new customer it is essential to check that the customer does not already have an Identity with the Enterprise.

This process is also used to ‘clean-up’ duplicates of customer identifying information that may exist within the organization.

Verify Customer

Process Identifier: 1.3.4.2.1

Hierarchy Level: 4

Brief Description:

Verify that the customer is who they claim they are.

Extended Description:

The purpose of this process is to verify that the customer is who they claim they are. This can be achieved by examination of an identity certification issued by a trusted body (such as governmental agency or other accepted means). Certification means can be physical (such as Passport or ID card), biometrical or other.

Establish New Customer Identity

Process Identifier: 1.3.4.2.2

Hierarchy Level: 4

Brief Description:

Issue a unique Identifier and Authentication information for a new customer without an existing identity.

Extended Description:

Not used for this process element

Clean-up & Archive Customer Identifying Information

Process Identifier: 1.3.4.2.3

Hierarchy Level: 4

Brief Description:

Clean up duplicate customer identifying information and archive terminated customer data in accordance with customer preferences.

Extended Description:

After termination, provides clean-up duplicates of customer identifying information that may exist within the organization. Profile and preference information for terminated customer relationships is archived if acceptable to the customer. All relevant parties are informed of the ended relationship. Other processes are triggered to dismantle the customer solution and servicing arrangements as necessary.

De-duplicate Customer Identity

Process Identifier: 1.3.4.2.4

Hierarchy Level: 4

Brief Description:

Merge multiple records from same customer.

Extended Description:

The purpose of this process is to check that the customer does not already have an Identity with the Enterprise. This process is also used to ‘clean-up’ duplicates of customer identifying information that may exist within the organization.

Issue Unique Customer ID

Process Identifier: 1.3.4.2.5

Hierarchy Level: 4

Brief Description:

Ensure only one customer identity exists across the Enterprise.

Extended Description:

The purpose of this process is to ensure only one customer identity exists across the Enterprise, which can be referenced across the whole Enterprise and allows the customer to quickly and easily identify himself. Before establishing an identity for a new customer de-duplication check is performed.

Gather Authentication Information

Process Identifier: 1.3.4.2.6

Hierarchy Level: 4

Brief Description:

Gather Authentication Information from the customer.

Extended Description:

The purpose of this process is to gather information that enables the enterprise to authenticate the customer identity. This information can be documents issued by other authorities (such as ID card or passport) or information that will enable the enterprise to re-authenticate the customer (such as answer to a secret question).

Re-establish Customer Relationship

Process Identifier: 1.3.4.3

Hierarchy Level: 3

Brief Description:

Re-establish customer relationship.

Extended Description:

The purpose of this process is to re-establish customer relationship which were suspended or terminated in the past. This process recovers the appropriate customer information along with the past customer interactions and provides them to the operational systems in order to provide continuity in the customer management processes.

Pending on the customer status this process performs:

- Change in the status of the customer information in the operational systems
- Retrieve customer information from archive systems

- Create/Update the retrieved customer information
- Restore / retrieve previous customer interactions information.

Terminate Customer Relationship

Process Identifier: 1.3.4.4

Hierarchy Level: 3

Brief Description:

Manage termination as appropriate.

Extended Description:

The customer relationship is terminated only if actually appropriate, the wishes of the customer are complied with where possible, records are kept in case the relationship with the customer is re-established, legal and ethical requirements for customer information are complied with. Significant customer life-stage events or business decisions by the Service Provider cause one or both parties to terminate the relationship. The need for complete termination of relationships needs to be differentiated from just terminating all services. The principles behind this include the Service Provider ending a relationship only if the customer ceases to exist, or the customer is fraudulent, the Enterprise decides that it no longer wishes to do business with the customer. All relevant parties are informed of the ended relationship. Other processes are triggered to dismantle the customer solution and servicing arrangements as necessary.

Manage Loyalty

Process Identifier: 1.3.4.5

Hierarchy Level: 3

Brief Description:

Define all aspects of a loyalty program, such as requirements and objectives of a loyalty program, determine the benefits to participants. Develop a program, prototype it, test it, rollout/launch it, amend and evaluate it, and terminate it when it is no longer viable for an enterprise.

Extended Description:

Manage Loyalty develops and retires loyalty programs and manages the operations of them.

Development and retirement defines all aspects of a loyalty program, such as requirements and objectives of the loyalty program, determines the benefits to participants. It develops a program, prototypes it, tests it, rollouts/launches it, amends and evaluates it, and terminates it when it is no longer viable for an enterprise.

Manage Loyalty process manages all operational aspects of running a loyalty program. It enables a party to become a members of a program, earn currency and rewards, and redeem currency. It manages a loyalty program account, enables a participant to leave a program, and provides operational reports.

Participants who can be customers and partners, each with its own loyalty program. There can be more than one loyalty program for each. Typically loyalty programs only are developed for customers. However, other parties, such as partners who have on-boarded an enterprise's product offering(s) or those who offer their offerings on an enterprise's marketplace, should also be rewarded for their loyalty. The reason is that they also provide revenue either directly or indirectly to an enterprise.

Note:

In 25.5 name of process was changed. old name was Loyalty Program Management This process was an L2 1.1.19

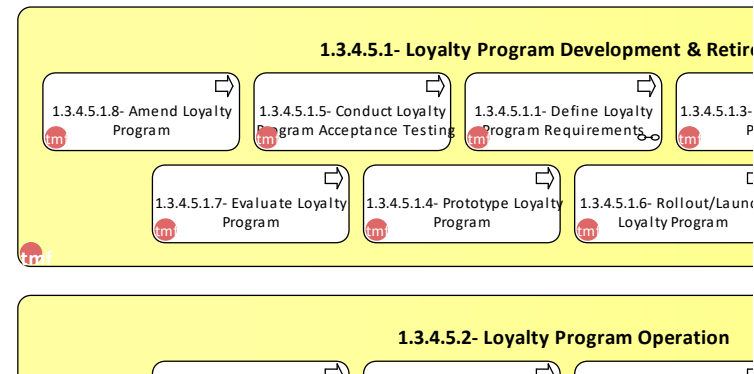

Figure 21: Manage Loyalty Children

Loyalty Program Development & Retirement

Process Identifier: 1.3.4.5.1

Hierarchy Level: 4

Brief Description:

Define all aspects of a loyalty program, such as requirements, its name, and objectives of the loyalty program, determine the benefits to participants. Develop a program, prototype it, test it, rollout/launch it, amend and evaluate it, and terminate it when it is no longer viable for an enterprise.

Extended Description:

Loyalty Program Development & Retirement defines all aspects of a loyalty program, such as requirements, the name, and objectives of the loyalty program, determines the benefits to participants. It develops the program, prototypes it, tests it, rollouts/launches it, amends and evaluates it, and terminates it when it is no longer viable for an enterprise.

Note that Royalty Program Development & Retirement is sometimes viewed as comparable to Product Offering Development & Retirement. While the rollout/launch, evaluate, amend, and terminate processes are similar the process other processes are different. For example, the Develop Loyalty Program process is quite different, as it includes sub-processes that focus on structuring the program, defining the program's currency, and capturing program requirements. Where noted, and to avoid duplication, existing Product Offering Development & Retirement processes will be reused.

Define Loyalty Program Requirements

Process Identifier: 1.3.4.5.1.1

Hierarchy Level: 5

Brief Description:

Conduct Strength/Weakness/Opportunity/Threat (SWOT) analysis. Identify the core objectives and needs of a loyalty program and loyalty program issues/risks. Define the objectives of the loyalty program, determine the benefits to participants, and identify processes with which the program will interact.

Extended Description:

Define Loyalty Program Requirements conducts an enterprise Strength/Weakness/Opportunity/Threat (SWOT) analysis, conducts competitive SWOT, and analyze a competitor's loyalty program by researching its loyalty program.

It identifies the core objectives and needs of a loyalty program and loyalty program issues/risks.

It also defines the objectives of the loyalty program, determine the benefits to participants, and identify processes with which the program will interact.

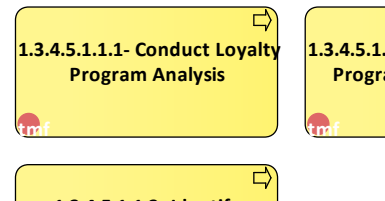

Figure 22: Define Loyalty Program Requirements Children

Conduct Loyalty Program Analysis

Process Identifier: 1.3.4.5.1.1.1

Hierarchy Level: 6

Brief Description:

Conduct an enterprise Strength/Weakness/Opportunity/Threat (SWOT) analysis, conduct competitive SWOT, and analyze a competitor's loyalty program by researching its loyalty program.

Extended Description:

Conduct Loyalty Program Analysis conducts an enterprise Strength/Weakness/Opportunity/Threat (SWOT) analysis. For example a weakness may be the number one complaint from our customer/partner feedback processes and how can a loyalty program turn this into a strength by introducing a loyalty program. Conduct competitive SWOT, and analyzes a competitor's loyalty program by researching its loyalty program.

The analysis includes researching the loyalty program best practices in an enterprise's industry and in other industries.

The results of the analysis are used to define the program's objectives and strategy.

Identify Loyalty Program Requirements

Process Identifier: 1.3.4.5.1.1.2

Hierarchy Level: 6

Brief Description:

Identify the core objectives and needs of a loyalty program, such as fitting the program into an enterprise's culture and the human resources needed to operate the program.

Extended Description:

Identify Loyalty Program Requirements identifies the core objectives and needs of a loyalty program.

Core objectives may include key success factors for a successful program and the time frame for meeting them, fitting the program into an enterprise's brand vision, fitting it into an enterprises' culture, and aligning it with current sales channel strategies.

Needs may include identifying marketing database support, human resources to develop and support the loyalty program, and financial resources.

Identify Potential Loyalty Program Issues

Process Identifier: 1.3.4.5.1.1.3

Hierarchy Level: 6

Brief Description:

Identify loyalty program issues/risks, such as employee issues regarding their participation in the program, technology issues, and risks that may cause the development of or the program to fail.

Extended Description:

Not used for this process element.

Develop Loyalty Program Strategy

Process Identifier: 1.3.4.5.1.2

Hierarchy Level: 5

Brief Description:

Define the name and objectives of the loyalty program, determine the benefits to participants, identify processes with which the program will interact, and gain approval for the strategy.

Extended Description:

Develop Loyalty Program Strategy defines the name and objectives of the program, such as satisfaction of participant's needs, possible program currency, such as points or discounts, increased competitive differentiation, types of parties targeted by the program.

The strategy also includes determining the benefits to participants. Benefits may be collected by using small study groups to obtain initial feedback, followed by larger group studies. Identify the processes with which the loyalty program will interact to capture, act on, and analyze program data.

Approval of the strategy from applicable stakeholders is obtained.

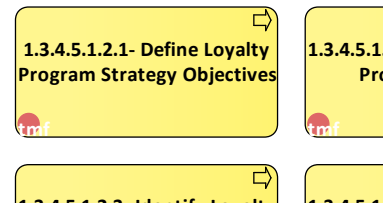

Figure 23: Develop Loyalty Program Strategy Children

Define Loyalty Program Strategy Objectives

Process Identifier: 1.3.4.5.1.2.1

Hierarchy Level: 6

Brief Description:

Define the name and objectives of the loyalty program, such as satisfaction of participant's needs, increased competitive differentiation, types of parties targeted by the program.

Extended Description:

Not used for this process element.

Identify Loyalty Program Benefits

Process Identifier: 1.3.4.5.1.2.2

Hierarchy Level: 6

Brief Description:

Define how to reward loyalty program participants and the benefits they will realize. Identify benefits to an enterprise.

Extended Description:

Identify Loyalty Program Participant Benefits defines how to reward participants, including possible currency, such as points or discounts, that will be used, and the benefits they will realize, both tangible and intangible. Identification of rewards and benefits may be accomplished by employing agile development techniques followed by confirming these with one or more representative groups of participants.

An enterprise's benefits are also identified, such as increase in the number of parties with whom the enterprise is engaged, revenue increases, and reduced churn / increased retention.

Identify Loyalty Program Process Interactions

Process Identifier: 1.3.4.5.1.2.3

Hierarchy Level: 6

Brief Description:

Identify the processes with which the loyalty program will interact to capture, act on, and analyze program data. For example, a payment related process that triggers earning points.

Extended Description:

Not used for this process element.

Approve Loyalty Program Strategy

Process Identifier: 1.3.4.5.1.2.4

Hierarchy Level: 6

Brief Description:

Gain enterprise commitment to the loyalty program strategy.

Extended Description:

Approve Loyalty Program Strategy gains enterprise commitment to the strategy. It includes identification of stakeholders and negotiation to gain stakeholder approval.

Develop Loyalty Program

Process Identifier: 1.3.4.5.1.3

Hierarchy Level: 5

Brief Description:

Define a loyalty program, the various kinds of interactions regarding a program, key performance indicators for the program, and develop loyalty program partnerships with other enterprises.

Extended Description:

Develop Loyalty Program defines a loyalty program, the various kinds of interactions regarding a program, key performance indicators for the program, and develops loyalty program partnerships with other enterprises.

The sub-processes also update and remove components of the program rather than create a large number of lower level processes.

This process also interacts with Marketing Campaign Management, Marketing Communications, and Advertising to prepare a loyalty program for launch. Marketing communications may include invitations to existing parties that the launch is coming.

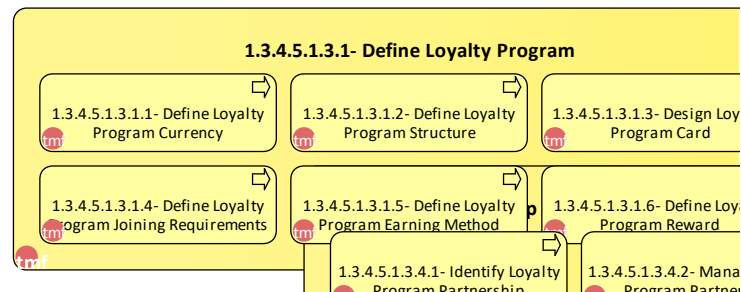

Figure 24: Develop Loyalty Program Children

Define Loyalty Program

Process Identifier: 1.3.4.5.1.3.1

Hierarchy Level: 6

Brief Description:

Define all aspects of a loyalty program, including its currency, structure, joining requirements, loyalty card design, and how currency is earned and used for rewards.

Extended Description:

Define Loyalty Program defines the type currency that may be earned/used by participants of the loyalty program and defines how the loyalty program will be structured to reward participants. It designs loyalty program card or cards (if tiers used) and defines the requirements that must be met for a participant to join a

loyalty program. It also specifies how a program's currency is earned by a participant and the program's rewards and their prices in terms of a loyalty program's currency.

Define Loyalty Program Currency

Process Identifier: 1.3.4.5.1.3.1.1

Hierarchy Level: 7

Brief Description:

Define the type currency that may be earned/used by participants of the loyalty program.

Extended Description:

Define Loyalty Program Currency defines the type currency that may be earned/used by participants of the loyalty program. For example, points, digital money, discounts, or stars. Note that in some cases there may not be a currency, such as for VIP programs that offer access to special product offerings. Possible currencies may have been identified by the Develop Loyalty Program Strategy process.

Note that there may be multiple currencies for a loyalty program. For example, points may be earned/used and discounts on future purchases may be earned/used.

Define Loyalty Program Structure

Process Identifier: 1.3.4.5.1.3.1.2

Hierarchy Level: 7

Brief Description:

Define how the loyalty program will be structured to reward participants.

Extended Description:

Define Loyalty Program Structure defines how the program will be structured to reward participants. There are many different ways a program can be structured. For example, a program may offer immediate rewards that are redeemable when a participant makes a purchase; a program may offer rewards when a certain threshold is reached; a program may be a VIP program, such as Amazon Prime, that requires a fee to be paid for access to rewards; or a hybrid program that represents a variety of ways rewards can be earned.

A loyalty program's structure may also include participant tiers which can be achieved by earning levels of a program's currency. Each tier may have different ways to earn a program's currency.

Design Loyalty Program Card

Process Identifier: 1.3.4.5.1.3.1.3

Hierarchy Level: 7

Brief Description:

Design loyalty program card or cards (if tiers used) and contract with an internal organization or external party to produce the card or cards.

Extended Description:

Design Loyalty Program Card designs a loyalty program card or cards (if tiers used) and contract with an internal organization or external party to produce the card or cards. If an external party is used the Party Tender Management (if a party has not been identified) and/or the Party Agreement Management enter into an agreement with the party to produce the card(s).

Define Loyalty Program Joining Requirements

Process Identifier: 1.3.4.5.1.3.1.4

Hierarchy Level: 7

Brief Description:

Define the requirements that must be met for a participant to join a loyalty program.

Extended Description:

Define Loyalty Program Joining Requirements defines the requirements that must be met for a participant to join a loyalty program. Requirements may include:

- A participant may have to be already engaged with an enterprise, such as a customer or partner
- A fee may be required. Note that the Product Specification & Offering Development & Retirement is used to create the fee
- A standard agreement may have to be accepted. Note a standard agreement and its acceptance are supported by the Party Agreement Management process
- There may be limitations that govern which loyalty programs a participant can join.

Define Loyalty Program Earning Method

Process Identifier: 1.3.4.5.1.3.1.5

Hierarchy Level: 7

Brief Description:

Specify how a program's currency is earned by a participant.

Extended Description:

Define Loyalty Program Earning Methods specifies how a program's currency is earned by a participant. For example, one point may be earned for each dollar spent by a customer or sold by a partner or via an enterprise's marketplace; an upper tier participant may earn bonus currency based on their tier.

The earning method is often based on a policy associated with an enterprise's product offering. This process defines the rule (policy) its conditions and actions, execution point, and event(s) that trigger(s) evaluation of the rule.

Note that this process is meant to use generic policy processes to define the base policy. These processes represent loyalty program specific extensions to them. To date the generic processes have not yet been developed.

Define Loyalty Program Reward

Process Identifier: 1.3.4.5.1.3.1.6

Hierarchy Level: 7

Brief Description:

Specify a reward and its price in terms of a loyalty program's currency and add it to one or more reward catalogs.

Extended Description:

Define Loyalty Program Reward specifies a reward, such as an application download, and its price in terms of a loyalty program's currency, or an anniversary/birthday reward provided at no charge to a participant, and add it to a reward catalog.

This process interacts with the Product Specification & Offering Development & Retirement process to manage rewards and the Product Offering Cataloging process to manage one or more reward catalogs. For example, there can be different award catalogs for customers and partners.

Define Loyalty Program Interaction Plan

Process Identifier: 1.3.4.5.1.3.2

Hierarchy Level: 6

Brief Description:

Define the various ways participants interact with a loyalty program and the ways in which an enterprise interacts with participants.

Extended Description:

Define Loyalty Program Interaction Plan defines the various ways participants interact with a loyalty program and the ways in which an enterprise interacts with participants.

Inbound interactions include the determining the channels used to serve participants, such as phone, web site, or outsourced channels. In the case of outsourced channels Party Tender Management and/or Party Agreement Management processes are used to identify and enter into an agreement with a partner who will serve participants. Inbound interactions also include how participants will redeem loyalty program rewards and report problems.

Outbound interactions include how, when, and why loyalty program participants will be contacted by an enterprise and the purpose of the communication. For example, if a participant moves from one tier to the next a congratulatory letter or email may be sent, or phone call may be made; a welcome package, including a membership card, may be sent to a new participant.

- What will be our contact strategy for our program members?
- How do you build evangelists?

Define Loyalty Program Key Performance Indicator

Process Identifier: 1.3.4.5.1.3.3

Hierarchy Level: 6

Brief Description:

Define a key quality/performance indicator that will be used when evaluating a loyalty program.

Extended Description:

Define Loyalty Program Key Performance Indicator defines a key quality/performance indicator (KQI/KPI) that will be used when evaluating a loyalty program. KQIs/KPIs may be used to measure financial, such as cost per participant and program break even point, participant acceptance, market penetration.

Note that this process uses a generalized set of metric processes to define the KPIs, thresholds, and consequences, both positive and negative, associated with thresholds.

Develop Loyalty Program Partnership

Process Identifier: 1.3.4.5.1.3.4

Hierarchy Level: 6

Brief Description:

Identifies an opportunity for partnering followed by the full lifecycle of entering into agreement with a partner.

Extended Description:

Develop Loyalty Program Partnership identifies an opportunity for partnering followed by the full lifecycle of entering into agreement with a partner.

Partnering may include making another enterprise's offerings available as rewards to loyalty program participants, allowing currency to be earned in partner's loyalty program, agreeing that another enterprise can accept an enterprise's loyalty program "currency" to acquire another enterprise's offerings, the ability to transfer currency into and or out of an enterprise's program, or an enterprise agreeing to co-brand a credit card. For example, an enterprise may offer Holiday Inn

hotel rewards; Amazon accepts American Express Rewards points as payment for some Amazon merchandise; American Airlines co-brands a MasterCard with Citibank.

Identify Loyalty Program Partnership Opportunity

Process Identifier: 1.3.4.5.1.3.4.1

Hierarchy Level: 7

Brief Description:

Determine if partnering is a viable option for a loyalty program and identify an opportunity for partnering.

Extended Description:

Identify Loyalty Program Partnership Opportunity determines if partnering is a viable option for a loyalty program and identifies an opportunity for partnering.

This process may interact with the Party Strategy & Planning process to carry out these tasks.

Manage Loyalty Program Partnership

Process Identifier: 1.3.4.5.1.3.4.2

Hierarchy Level: 7

Brief Description:

Identify potential partners and enter into partnership agreement with one or more of them to achieve a specific loyalty program objective.

Extended Description:

Manage Loyalty Program Partnership identifies potential partners and enters into partnership agreement with one or more of them to achieve a specific loyalty program objective. For example, making another enterprises product offerings as loyalty program rewards.

An agreement may be put in place to:

- Control/data ownership issues
- Convert currency between loyalty programs
- Transfer currency into and out of an enterprise's program
- Protect participant data privacy.

This process interacts with and uses Party Relationship Development & Retirement, Party Tender Management and Party Agreement Management. It may also interact with and use Party Offering Development & Retirement to on-board a partner's offerings.

Prototype Loyalty Program

Process Identifier: 1.3.4.5.1.4

Hierarchy Level: 5

Brief Description:

Iteratively develop a loyalty program to a state that enables it to be tested in some way.

Extended Description:

Prototype Loyalty Program interactively develops a loyalty program. Develop Loyalty Program sub- processes develop each iteration of the loyalty program to a state that enables it to be tested in some way by the Conduct Loyalty Program Acceptance Testing process. Tests can be conducted internally, in the form of a pilot, or field trial. Tests are measured against defined acceptance criteria. Identified improvements/enhancements are made during the next iteration based on test results. Once the final iteration tests are accepted the loyalty program is rolled out and launched to the market at large.

Conduct Loyalty Program Acceptance Testing

Process Identifier: 1.3.4.5.1.5

Hierarchy Level: 5

Brief Description:

Conduct acceptance testing of anew or enhanced loyalty program in preparation for launch/rollout to the market.

Extended Description:

Conduct Loyalty Program Acceptance Testing reuses Product Offering Acceptance Testing sub-processes to manage acceptance testing of a new or amended/enhanced loyalty program and to handover for ongoing rollout. Acceptance testing is conducted using commercial pilots or market trials of the program or prototypes of it, in which case the commercial negotiations for the pilot and/or trial are managed through these processes. These processes identify the shortcomings or issues, and manage the necessary improvements to a loyalty program to allow full rollout. At the conclusion of the pilots and/or trials when the loyalty program passes its acceptance tests or defined acceptance criteria it is ready for launch/rollout to the market.

Rollout/Launch Loyalty Program

Process Identifier: 1.3.4.5.1.6

Hierarchy Level: 5

Brief Description:

Support the operational introduction of new processes and infrastructure to support a new or amended/enhanced loyalty program and conduct operations readiness testing and acceptance.

Extended Description:

Rollout/Launch Loyalty Program reuses Rollout/Launch Product Offering sub-processes to support the operational introduction of new processes and infrastructure to support a new or amended/enhanced loyalty program. It is responsible for conducting operations readiness testing and acceptance. It develops the procedures for the specific fulfillment, assurance and revenue management processes associated with a loyalty program and keeps them up to date. After successful testing, accept the new or amended/enhanced process capabilities and manage a full-scale introduction for general availability.

Develop policy support and decision support knowledge for a loyalty program.

Evaluate Loyalty Program

Process Identifier: 1.3.4.5.1.7

Hierarchy Level: 5

Brief Description:

Analyze the performance of an existing loyalty program to identify inadequacies and required improvements.

Extended Description:

Evaluate Loyalty Program Assess analyzes the performance of an existing loyalty program to identify inadequacies and required improvements. The process uses information from loyalty program participants, defined program Key Quality/Performance Indicators, and feedback from operational activities to identify required improvements.

Amend Loyalty Program

Process Identifier: 1.3.4.5.1.8

Hierarchy Level: 5

Brief Description:

Amend a loyalty program's earning methods, rewards, tiers, partners, and so forth.

Extended Description:

Amend Loyalty Program amends any aspect of a loyalty program, such as earning methods, rewards, tiers, partners, and so forth.

It uses the Develop Loyalty Program sub-processes to make the updates (amendments) to the program. It interacts with Marketing Communications to let the market and participants know about updates to program, such as addition of co-branded card and changes in rewards. It also obtains approval for the amendments and, if updates are substantial, may go through the Loyalty Program Acceptance Testing and Loyalty Program Launch/Rollout processes.

Terminate Loyalty Program

Process Identifier: 1.3.4.5.1.9

Hierarchy Level: 5

Brief Description:

Identify an existing loyalty program which is unviable or has reached its end of life. It manages the processes to exit it from the market.

Extended Description:

Terminate Loyalty Program reuses Manage Product Offering Exit sub-processes to identify an existing loyalty program which is unviable or that has reached its end of life. It manages the process to exit it from the market. It analyzes an existing loyalty program to identify if it is economically or strategically, identify participants impacted by any exit, develop participant specific exit or migration strategies, develop infrastructure transition and/or replacement strategies, and manage the operational aspects of the exit process. A business proposal identifying the competitive threats, risks and costs may be required as part of developing the exit strategy. It includes any interaction with cross-enterprise co-ordination and management functions to ensure that the needs of all stakeholders are identified and managed.

Note that in the sub-processes customers refer to any loyalty program participant, not only customers who may be participants.

Loyalty Program Operation

Process Identifier: 1.3.4.5.2

Hierarchy Level: 4

Brief Description:

Manage all operational aspects of running a loyalty program. Enable parties to become a members of a program, earn currency and rewards, and redeem currency. Manage a loyalty program account, leave a program, and provide operational reports.

Extended Description:

Loyalty Program Operation manages all operational aspects of running a loyalty program. It enables parties to become a members of a program, earn currency and rewards, and redeem currency. It also manages a loyalty program account, enables a participants to leave a program, and provides operational reports.

For example, become a loyalty program participant includes providing an invitation to join a loyalty program, enables a party to join a program, and provides a loyalty program participant package; earning loyalty program currency enables a participant to earn loyalty program currency, either directly from an enterprise or via an enterprise's loyalty program partner.

Become Loyalty Program Participant

Process Identifier: 1.3.4.5.2.1

Hierarchy Level: 5

Brief Description:

Provide an invitation to join a loyalty program, enable a party to join a program, and provide a loyalty program participant package.

Extended Description:

Become Loyalty Program Participant provides an invitation to join a loyalty program, enables a party to join a program, and provides a loyalty program participant package.

An invitation to a party suggests they join a loyalty program. The invitation can be made when a party, such as a customer or partner, initially engages with an enterprise.

A party is established as a loyalty program participant and provided with a loyalty program account. A loyalty program ID may be issued by an enterprise, or a party may be able to create their own ID. A participant may also be required to accept a standard loyalty program agreement's terms & conditions.

A loyalty program package for a program participant is created and provided it to them. A package is typically provided when a participant initial joins a loyalty program, achieves a new tier, or when participation is renewed, such as yearly.

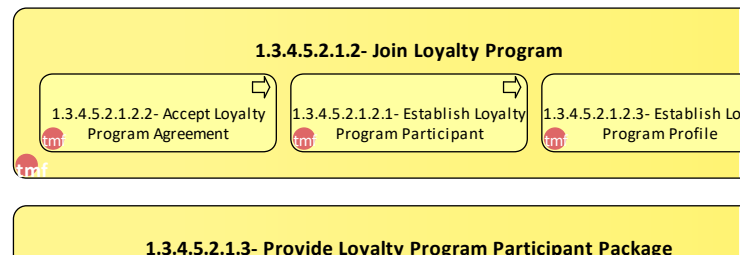

Figure 25: Become Loyalty Program Participant Children

Provide Loyalty Program Invitation

Process Identifier: 1.3.4.5.2.1.1

Hierarchy Level: 6

Brief Description:

Provide an invitation to a party to join a loyalty program.

Extended Description:

Provide Loyalty Program Invitation communicates an invitation to a party suggesting they join a loyalty program. The invitation can be made when a party, such as a customer or partner, initially engages with an enterprise. For example, when a customer creates an online account they could be immediately asked if there is a desire to join a loyalty program. If a party does not join when initially engaging with an enterprise an invitation may be communicated to them at a later time.

Note that if invitations were not sent to applicable existing parties during the development of a loyalty program this process is responsible for doing so.

Join Loyalty Program

Process Identifier: 1.3.4.5.2.1.2

Hierarchy Level: 6

Brief Description:

Join a loyalty program and set up a loyalty program account.

Extended Description:

Join Loyalty Program enables a party to establish themselves as a loyalty program participant and establish a loyalty program account. A loyalty program ID may be issued by an enterprise, or a party may be able to create their own ID. A participant may also be required to accept a standard loyalty program agreement's terms & conditions.

Existing information about a party can be used to establish the participant. A profile can be created for the participant by interacting with the Party Relationship & Development process. For example, suppose an enterprise has an agreement with a partner that allows a participant to earn currency in the partner's loyalty program; the participant may choose as a default to earn currency in the partner's program.

Note that the sub-processes also update and remove information about a participant.

Establish Loyalty Program Participant

Process Identifier: 1.3.4.5.2.1.2.1

Hierarchy Level: 7

Brief Description:

Create a loyalty program participant and establish a loyalty program account.

Extended Description:

Establish Loyalty Program Participant creates a loyalty program participant and establish a loyalty program account. A loyalty program ID may be issued by an enterprise, or a party may be able to create their own ID. Existing information about a party can be used to establish the participant. The loyalty program account is associated with applicable loyalty program reward catalog(s).

There may be requirements that limit which program(s) a participant may join. These are checked to ensure that a participant can join a loyalty program.

Accept Loyalty Program Agreement

Process Identifier: 1.3.4.5.2.1.2.2

Hierarchy Level: 7

Brief Description:

Accept a standard loyalty program agreement's terms & conditions.

Extended Description:

Accept Loyalty Program Agreement provides the opportunity for a loyalty program participant to accept a standard loyalty program agreement's terms & conditions.

There may be a charge associated with joining a program. In this case there will be a product offering and price for joining associated with the agreement. Upon acceptance a customer or party order will be placed on behalf of the participant for the offering and payment will be made by the participant.

Establish Loyalty Program Profile

Process Identifier: 1.3.4.5.2.1.2.3

Hierarchy Level: 7

Brief Description:

Create a profile for a loyalty program participant.

Extended Description:

Establish Loyalty Program Profile creates a profile for a loyalty program participant by interacting with the Party Relationship & Development process. For example, suppose an enterprise has an agreement with a partner that allows a participant to earn currency in the partner's loyalty program; the participant may choose as a default to earn currency in the partner's program.

Provide Loyalty Program Participant Package

Process Identifier: 1.3.4.5.2.1.3

Hierarchy Level: 6

Brief Description:

Create a loyalty program package for a program participant and provide it to them.

Extended Description:

Provide Loyalty Program Participant Package creates loyalty program package for a program participant and provides it to them. A package is typically provided when a participant initial joins a loyalty program, achieves a new tier, or when participation is renewed, such as yearly.

A loyalty program card, if applicable, is produced as part of the package. The package may include a welcome as well as information about the loyalty program.

Create Loyalty Program Participant Package

Process Identifier: 1.3.4.5.2.1.3.1

Hierarchy Level: 7

Brief Description:

Create a loyalty program package for a program participant.

Extended Description:

Create Loyalty Program Participant Package creates a loyalty program package for a program participant. A package is typically provided when a participant initial joins a loyalty program, achieves a new tier, or when participation is renewed, such as yearly.

Produce Loyalty Program Participant Card

Process Identifier: 1.3.4.5.2.1.3.2

Hierarchy Level: 7

Brief Description:

Produce a loyalty program card, if applicable, as part of a loyalty program participant package.

Extended Description:

Not used for this process element.

Issue Loyalty Program Participant Package

Process Identifier: 1.3.4.5.2.1.3.3

Hierarchy Level: 7

Brief Description:

Provide a loyalty program package to a participant.

Extended Description:

Not used for this process element.

Earn Loyalty Program Currency

Process Identifier: 1.3.4.5.2.2

Hierarchy Level: 5

Brief Description:

Earn loyalty program currency, either directly from an enterprise or via an enterprise's partner in the loyalty program.

Extended Description:

Earn Loyalty Program Currency earns loyalty program currency, either directly from an enterprise or via an enterprise's loyalty program partner.

This process may notify the Provide Loyalty Account Communication process, which manages operational communications with a loyalty program participant.

It may also notify the Earn Loyalty Program Reward process if earning loyalty program currency qualifies a program participant for a reward.

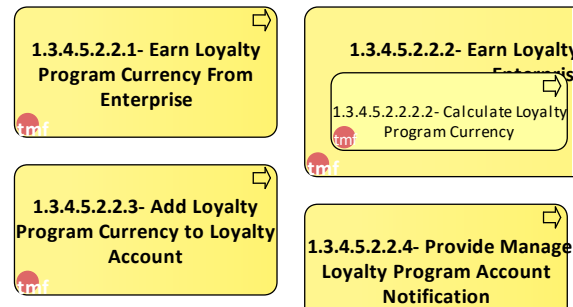

Figure 26: Earn Loyalty Program Currency Children

Earn Loyalty Program Currency From Enterprise

Process Identifier: 1.3.4.5.2.2.1

Hierarchy Level: 6

Brief Description:

Earn loyalty program currency directly from an enterprise. Currency is earned when an event triggers the evaluation of a loyalty program rule associated with an offering.

Extended Description:

Earn Loyalty Program Currency From Enterprise earns loyalty program currency directly from an enterprise. Currency is earned when an event triggers the evaluation of a loyalty program rule associated with an offering. For example, an event may be the purchase of a product offering or the end of a year when loyalty program tiers are evaluated.

Earn Loyalty Program Currency From Enterprise Partner

Process Identifier: 1.3.4.5.2.2.2

Hierarchy Level: 6

Brief Description:

Earn loyalty program currency via an enterprise's loyalty program partner. A partner provides the currency or information that can be used to determine currency.

Extended Description:

Earn Loyalty Program Currency From Enterprise Partner earns loyalty program currency via an enterprise's loyalty program partner. A partner provides the currency or information that can be used to determine currency. For example converting money charged to a credit card to a currency, such as points, of an enterprise's loyalty program.

Receive Loyalty Partner Currency Communication

Process Identifier: 1.3.4.5.2.2.2.1

Hierarchy Level: 7

Brief Description:

Receive a loyalty program communication from a partner that provides loyalty program currency or information that can be used to determine the currency for one or more loyalty program participants.

Extended Description:

Not used for this process element.

Calculate Loyalty Program Currency

Process Identifier: 1.3.4.5.2.2.2.2

Hierarchy Level: 7

Brief Description:

Calculate the currency earned by a loyalty program participant based on a communication from a partner.

Extended Description:

Not used for this process element

Add Loyalty Program Currency to Loyalty Account

Process Identifier: 1.3.4.5.2.2.3

Hierarchy Level: 6

Brief Description:

Add currency earned to a loyalty program participants balance.

Extended Description:

Not used for this process element

Provide Manage Loyalty Program Account Notification

Process Identifier: 1.3.4.5.2.2.4

Hierarchy Level: 6

Brief Description:

Provide a notification to the Provide Loyalty Account Communication process, which manages operational communications with a loyalty program participant.

Extended Description:

Provide Manage Loyalty Program Account Notification provides a notification to the Provide Loyalty Account Communication process, which manages operational communications with a loyalty program participant. For example, when the currency earned qualifies the participant for a higher tier in the program.

Provide Earned Loyalty Program Reward Notification

Process Identifier: 1.3.4.5.2.2.5

Hierarchy Level: 6

Brief Description:

Provide a notification to the Earn Loyalty Program Reward process if earning loyalty program currency qualifies a program participant for a reward.

Extended Description:

Provide Earned Loyalty Program Reward Notification provides a notification to the Earn Loyalty Program Reward process if earning loyalty program currency qualifies a program participant for a reward. For example, after watching a certain number of videos a loyalty program participant can view one video free.

Earn Loyalty Program Reward

Process Identifier: 1.3.4.5.2.3

Hierarchy Level: 5

Brief Description:

Earn a loyalty program reward. A reward may be earned by a loyalty program participant based on currency earned or may be awarded based on an event. Communicate the attainment of a reward.

Extended Description:

Earn Loyalty Program Reward earns a loyalty program reward. A reward may be earned by a loyalty program participant based on currency earned which is communicated to this process by the Provide Earned Loyalty Program Reward Notification process. A reward may also be awarded based on an event.

This process may notify the Provide Loyalty Account Communication process, which manages operational communications with a loyalty program participant. In this case to inform a loyalty program participant that they have earned a reward.

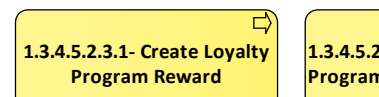

Figure 27: Earn Loyalty Program Reward Children

Create Loyalty Program Reward

Process Identifier: 1.3.4.5.2.3.1

Hierarchy Level: 6

Brief Description:

Earn a loyalty program reward. A reward may be earned by a loyalty program participant based on currency earned or may be awarded based on an event.

Extended Description:

Create Loyalty Program Reward earns a loyalty program reward. A reward may be earned by a loyalty program participant based on currency earned which is communicated to this process by the Provide Earned Loyalty Program Reward Notification process. A reward may also be awarded based on an event, such as on the anniversary of a participants date of joining a loyalty program.

Provide Loyalty Program Reward Notification

Process Identifier: 1.3.4.5.2.3.2

Hierarchy Level: 6

Brief Description:

Communicate the attainment of a reward.

Extended Description:

Provide Loyalty Program Reward Notification notifies the Provide Loyalty Account Communication process, which manages operational communications with a loyalty program participant. In this case to inform a loyalty program participant that they have earned a reward.

Redeem Loyalty Program Currency

Process Identifier: 1.3.4.5.2.4

Hierarchy Level: 5

Brief Description:

Use a program's currency to obtain an enterprise's or a loyalty program partner's product offerings. Reduce a participant's loyalty program account by the amount of currency used for obtaining product offering(s).

Extended Description:

Redeem Loyalty Program Currency enables a loyalty program participant to use a program's currency to obtain an enterprise's or a loyalty program partner's product offering(s). The reward offering is obtained via the Product Offering Purchasing process, the Customer Order Handling process, or the Party Order Handling process. Redemption is made from the applicable loyalty program reward catalog(s) associated with the loyalty program participant's loyalty account.

A loyalty program participant may also redeem a reward that has been earned by them. For example, a loyalty program signup reward that provides a discount on a purchase.

A participant's loyalty program account is reduced by the amount of currency used for obtaining product offering(s) which is communicated to this process by the process used to obtain the reward.

Figure 28: Redeem Loyalty Program Currency Children

Make Loyalty Program Redemption

Process Identifier: 1.3.4.5.2.4.1

Hierarchy Level: 6

Brief Description:

Use a program's currency to obtain an enterprise's or a loyalty program partner's product offering(s).

Extended Description:

Make Loyalty Program Redemption enables a loyalty program participant to use a program's currency to obtain an enterprise's or a loyalty program partner's product offering(s). The reward offering is obtained via the Product Offering Purchasing process, the Customer Order Handling process, or the Party Order Handling process. Redemption is made from the applicable loyalty program reward catalog(s) associated with the loyalty program participant's loyalty account.

A loyalty program participant may also redeem a reward that has been earned by them. For example, a loyalty program signup reward that provides a discount on a purchase.

Reduce Loyalty Program Account Balance

Process Identifier: 1.3.4.5.2.4.2

Hierarchy Level: 6

Brief Description:

Reduce a participant's loyalty program account by the amount of currency used for obtaining product offering(s).

Extended Description:

Not used for this process element

Manage Loyalty Program Account

Process Identifier: 1.3.4.5.2.5

Hierarchy Level: 5

Brief Description:

Update a loyalty program account and make changes to loyalty program participant information. Expire, reinstate, transfer in/out, adjust, a loyalty participant's account currency. Prepare and send a loyalty program communication to a participant or for in

Extended Description:

Manage Loyalty Program Account updates to a loyalty program account, such as changing a pin/password or the name of the account. The Party Relationship Development & Retirement process is used to make changes to loyalty program participant information. It provides the ability to expire, reinstate, transfer in/out, adjust, a loyalty participant's account currency.

It also prepares and sends a loyalty program communication to a participant or for internal use by an enterprise. Communications may be a loyalty program account summary, notification of tier upgrade/downgrade, reward notifications, upcoming expiration or expiration of program currency.

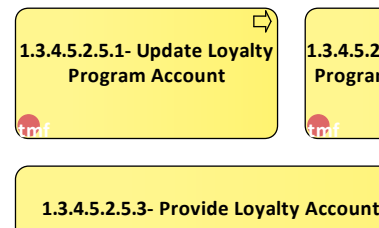

Figure 29: Manage Loyalty Program Account Children

Update Loyalty Program Account

Process Identifier: 1.3.4.5.2.5.1

Hierarchy Level: 6

Brief Description:

Update a loyalty program account and make changes to loyalty program participant information.

Extended Description:

Update Loyalty Program Account makes updates to a loyalty program account, such as changing a pin/password or the name of the account. The Party Relationship Development & Retirement process is used to make changes to loyalty program participant information, such as name, contact information, profile, demographics, and bill/ship to.

Manage Loyalty Program Account Currency

Process Identifier: 1.3.4.5.2.5.2

Hierarchy Level: 6

Brief Description:

Expire, reinstate, transfer in/out, adjust, a loyalty participant's account currency.

Extended Description:

Manage Loyalty Program Account Currency provides the ability to expire, reinstate, transfer in/out, adjust, a loyalty participant's account currency. The Provide Loyalty Account Communication process provides a notification of any of these types of updates.

Note that transfer in/out may be subject to an agreement with a loyalty program partner.

These updates are in addition to those made when earning loyalty program currency or redeeming loyalty program rewards.

Provide Loyalty Account Communication

Process Identifier: 1.3.4.5.2.5.3

Hierarchy Level: 6

Brief Description:

Prepare and send a loyalty program communication to a participant or for internal use by an enterprise.

Extended Description:

Provide Loyalty Account Communication prepares and sends a loyalty program communication to a participant or for internal use by an enterprise. Communications may be a loyalty program account summary, notification of tier upgrade/downgrade, reward notifications, upcoming expiration or expiration of program currency.

Other Loyalty Program Operation processes may provide information via a notification to this process should be contained on the communication.

Prepare Loyalty Account Communication

Process Identifier: 1.3.4.5.2.5.3.1

Hierarchy Level: 7

Brief Description:

Prepare a loyalty program communication to a participant or for internal use by an enterprise.

Extended Description:

Prepare Loyalty Account Communication prepares a loyalty program communication to a participant or for internal use by an enterprise. Communications may be a loyalty program account summary, notification of tier upgrade/downgrade, reward notifications, upcoming expiration or expiration of program currency.

Other Loyalty Program Operation processes may provide information via a notification to this process should be contained on the communication.

Send Loyalty Account Communication

Process Identifier: 1.3.4.5.2.5.3.2

Hierarchy Level: 7

Brief Description:

Send a loyalty program communication to a participant or for internal use by an enterprise.

Extended Description:

Not used for this process element

Leave Loyalty Program

Process Identifier: 1.3.4.5.2.6

Hierarchy Level: 5

Brief Description:

Begin and complete the process of leaving an enterprise's loyalty program. A loyalty program participant or an enterprise may initiate this process.

Extended Description:

Leave Loyalty Program begins and completes the process of leaving an enterprise's loyalty program. A loyalty program participant or an enterprise may initiate this process. An enterprise may initiate the process if the Provide Loyalty Program Operation Report has identified abuse of the program by a participant.

Upon leaving a participant's status may be changed to reflect they are no longer a member, or the participant may be removed (deleted) from the program.

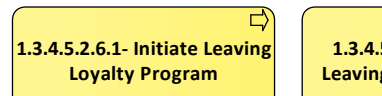

Figure 30: Leave Loyalty Program Children

Initiate Leaving Loyalty Program

Process Identifier: 1.3.4.5.2.6.1

Hierarchy Level: 6

Brief Description:

Begin the process of leaving an enterprise's loyalty program. A loyalty program participant or an enterprise may initiate this process.

Extended Description:

Initiate Leaving Loyalty Program begins the process of leaving an enterprise's loyalty program. A loyalty program participant or an enterprise may initiate this process.

An enterprise may initiate the process if the Provide Loyalty Program Operation Report has identified abuse of the program by a participant.

This process provides information to the Prepare Loyalty Account Communication process to notify the participant of an enterprise's decision to terminate a party's participation in a loyalty program. If leaving is initiated by a participant the Prepare Loyalty Account Communication process may be provided information in an attempt to have a participant reconsider leaving.

Complete Leaving Loyalty Program

Process Identifier: 1.3.4.5.2.6.2

Hierarchy Level: 6

Brief Description:

Complete the process for a loyalty program participant to leave the program.

Extended Description:

Complete Leaving Loyalty Program completes the process for a loyalty program participant to leave the program. A participant's status may be changed to reflect they are no longer a member, or the participant may be removed (deleted) from the program.

Information is provided to the Provide Loyalty Account Communication process so that a notification of termination in the program can be prepared and send to a participant.

Provide Loyalty Program Operation Report

Process Identifier: 1.3.4.5.2.7

Hierarchy Level: 5

Brief Description:

Generate a loyalty program operation report, such as various loyalty program status reports, trend analysis, and reports that identify suspected abuse of a loyalty program.

Extended Description:

Provide Loyalty Program Operation Report generates a loyalty program operation report, such as various loyalty program status reports, trend analysis, and reports that identify suspected abuse of a loyalty program.

Recipient lists are maintained by a generalized process that should be developed and added to the Common Enterprise Process grouping in the Enterprise domain.

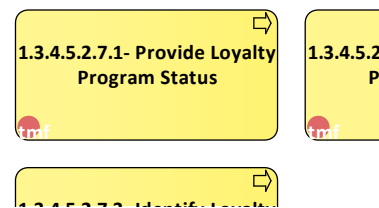

Figure 31: Provide Loyalty Program Operation Report Children

Provide Loyalty Program Status

Process Identifier: 1.3.4.5.2.7.1

Hierarchy Level: 6

Brief Description:

Produce a variety of loyalty program status reports, such as churn and uptake.

Extended Description:

Provide Loyalty Program Status produces a variety of loyalty program status reports, including, but not limited to, churn and uptake, currency earned and redeemed, rewards made and redeemed, and breakage.

Breakage is the difference between points issued and points redeemed. It is the biggest driver of profit for a loyalty program.

Some reports, such as churn, uptake, and breakage, may use data analytics to generate them.

Analyze Loyalty Program Trend

Process Identifier: 1.3.4.5.2.7.2

Hierarchy Level: 6

Brief Description:

Produce a variety of trend reports attempting to spot a pattern, or trend, in the information over a given time period.

Extended Description:

Analyze Loyalty Program Trend produces a variety of trend reports attempting to spot a pattern, or trend, in the information over a given time period. The information analyzed is often similar to that contained in loyalty program status reports, such as churn, uptake and breakage.

Trend analysis may employ data analytics and other techniques to identify a trend.

Identify Loyalty Program Abuse

Process Identifier: 1.3.4.5.2.7.3

Hierarchy Level: 6

Brief Description:

Identify and report possible loyalty program abuse.

Extended Description:

Identify Loyalty Program Abuse identifies and reports possible loyalty program abuse. For example, a loyalty program member may repeatedly earn currency, redeem currency, and then return the offering(s) used to earn currency.

Possible abuse may be communicated to Initiate Leaving Loyalty Program.

Customer QoS/SLA Management

Process Identifier: 1.3.8

Hierarchy Level: 2

Brief Description:

Customer QoS/SLA Management uses indicators produced by other processes such as Product Performance Mgt as well as information coming from Customer orders for delivery delay vs. contractual Quality of Service (QoS)

Extended Description:

Customer QoS/SLA Management processes encompass monitoring, managing and reporting of delivered vs. contractual Quality of Service (QoS), as defined in the enterprise's Service Descriptions, customer contracts or the catalogue of product offerings. They are also concerned with the performance of the enterprise and its products in relation to its Service Level Agreements (SLA) for specific product instances, and other service-related documents. They include operational parameters such as resource performance and availability, but also encompass performance across all of a product's contractual or regulatory parameters, e.g., % Completion on Time for Order Requests, time to repair commitments, customer contact performance. Failure to meet a contracted SLA may lead to billing adjustments, which are handled by Billing and Collections Management.

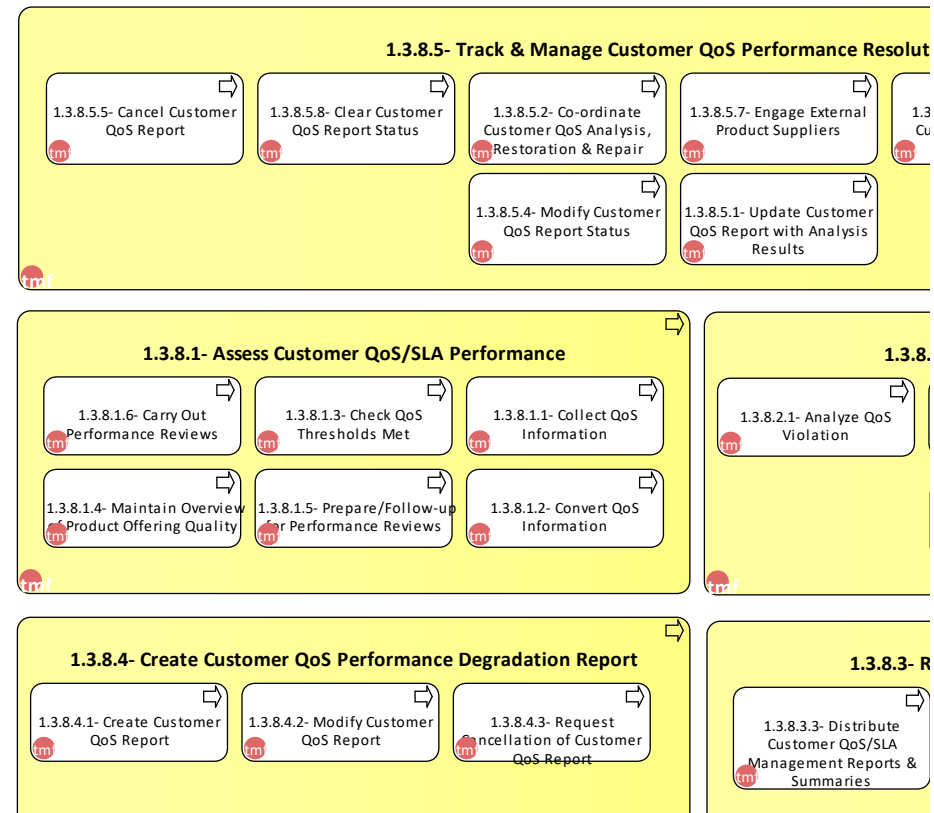

Figure 32: Customer QoS/SLA Management Children

Assess Customer QoS/SLA Performance

Process Identifier: 1.3.8.1

Hierarchy Level: 3

Brief Description:

Manage the overall assessment of the customer QoS/SLA performance.

Extended Description:

The purpose of the Assess Customer QoS/SLA Performance processes is to manage the overall assessment of the customer QoS/SLA performance.

These processes are responsible for ensuring that the QoS received by the customer meets the contractual obligations agreed with the customer. They check that the QoS data that they receive from other processes and entities meets the required QoS thresholds and they alert other processes and entities if this is not the case.

These processes are responsible for collecting service and resource performance information analyzed and reported by the Report Service Quality Performance and Report Resource Performance processes, and converting it into a form suitable for determining whether the contractual obligations with the customer are being met. The actual reporting of the results of the assessments is managed in the Report Customer QoS Performance processes.

They are responsible for maintaining an overview of the quality of the customer's purchased product offering, and for carrying out QoS performance reviews with the customer, as well as for undertaking any preparatory and/or follow-up steps with other processes/entities in conjunction with such reviews.

Collect QoS Information

Process Identifier: 1.3.8.1.1

Hierarchy Level: 4

Brief Description:

Collect service and resource performance information analyzed and reported by the Report Service Quality Performance and Report Resource Performance processes.

Extended Description:

Not used for this process element

Convert QoS Information

Process Identifier: 1.3.8.1.2

Hierarchy Level: 4

Brief Description:

Convert collected information it into a form suitable for determining whether the contractual obligations with the customer are being met.

Extended Description:

Not used for this process element

Check QoS Thresholds Met

Process Identifier: 1.3.8.1.3

Hierarchy Level: 4

Brief Description:

Check customer QoS data against required thresholds and alert relevant parties to any violations.

Extended Description:

Check that the QoS data received from other processes and entities meets the required QoS thresholds and alert other processes and entities if this is not the case. These processes are responsible for ensuring that the QoS received by the customer meets the contractual obligations agreed with the customer. The actual reporting of the results of the assessments is managed in the Report Customer QoS Performance processes.

Maintain Overview of Product Offering Quality

Process Identifier: 1.3.8.1.4

Hierarchy Level: 4

Brief Description:

Maintain an overview of the quality of the customer's purchased product offering.

Extended Description:

Not used for this process element

Prepare/Follow-up for Performance Reviews

Process Identifier: 1.3.8.1.5

Hierarchy Level: 4

Brief Description:

Undertake any preparatory and/or follow-up steps with other processes/entities in conjunction with performance reviews.

Extended Description:

Not used for this process element

Carry Out Performance Reviews

Process Identifier: 1.3.8.1.6

Hierarchy Level: 4

Brief Description:

Carry out QoS performance reviews with the customer.

Extended Description:

Not used for this process element

Manage QoS/SLA Violation

Process Identifier: 1.3.8.2

Hierarchy Level: 3

Brief Description:

Ensure that the customer and the relevant internal processes are informed of service quality degradations and violations and that action is undertaken to resolve the degradation or violation.

Extended Description:

The purpose of the Manage QoS/SLA Violation processes is to ensure that the customer and the relevant internal processes are informed of service quality degradations and violations and that action is undertaken to resolve the degradation or violation. They analyze all the information related to a QoS/SLA degradation or violation and take the appropriate actions when a soft threshold is crossed or the agreed QoS is violated. They follow up the actions to ensure that the customer is satisfied with the resolution of the problem. They ensure that the customer is informed of any planned maintenance or other scheduled events likely to impact delivery of the customer's service.

Analyze QoS Violation

Process Identifier: 1.3.8.2.1

Hierarchy Level: 4

Brief Description:

Analyze all the information related to a QoS/SLA degradation or violation.

Extended Description:

Not used for this process element

Take QoS Violation Action

Process Identifier: 1.3.8.2.2

Hierarchy Level: 4

Brief Description:

Take the appropriate actions when a soft threshold is crossed or the agreed QoS is violated. Ensure that action is undertaken to resolve the degradation or violation.

Extended Description:

Not used for this process element

Follow-up QoS Violation Action

Process Identifier: 1.3.8.2.3

Hierarchy Level: 4

Brief Description:

Follow up the actions to ensure that the customer is satisfied with the resolution of the problem.

Extended Description:

Not used for this process element

Inform Customer on QoS Impacts

Process Identifier: 1.3.8.2.4

Hierarchy Level: 4

Brief Description:

Inform customers and internal processes of service quality degradations, violations, and planned impacts.

Extended Description:

Ensure that the customer and the relevant internal processes are informed of service quality degradations and violations. Ensure that the customer is informed of any planned maintenance or other scheduled events likely to impact delivery of the customer's service.

Report Customer QoS Performance

Process Identifier: 1.3.8.3

Hierarchy Level: 3

Brief Description:

Report on the customer's QoS/SLA performance.

Extended Description:

The objective of the Report Customer QoS Performance processes is to monitor the status of customer QoS performance degradation reports, provide notifications of any changes and provide management reports.

These processes are responsible for continuously monitoring the status of customer QoS performance degradation reports and managing notifications to other processes and to other parties, including customers, registered to receive notifications of any status changes. Notification lists are managed and maintained by the Support Customer QoS/SLA Management processes.

These processes record, analyze and assess the customer QoS performance degradation report status changes to provide management reports and any specialized summaries of the efficiency and effectiveness of the overall Customer QoS/SLA Management process. These specialized summaries could be specific reports required by specific audiences and/or customers.

These processes also report any identified constraints that can affect customer related quality standards to other processes. These constraints may include specific resource failures, capacity shortages due to unexpected demand peaks, etc.

Monitor Customer QoS Report Status

Process Identifier: 1.3.8.3.1

Hierarchy Level: 4

Brief Description:

Monitor customer QoS report status and record status changes for management reporting.

Extended Description:

Monitor the status of customer QoS performance degradation reports. These processes are responsible for continuously monitoring the status of customer QoS performance degradation reports. These processes record the customer QoS performance degradation report status changes to support management reports.

Notify Changes on Customer QoS Report Status

Process Identifier: 1.3.8.3.2

Hierarchy Level: 4

Brief Description:

Notify registered parties of customer QoS report status changes.

Extended Description:

Provide notifications of any changes to the status of customer QoS performance degradation reports. These processes are responsible for managing notifications to other processes and to other parties, including customers, registered to receive notifications of any status changes. Notification lists are managed and maintained by the Support Customer QoS/SLA Management processes.

Distribute Customer QoS/SLA Management Reports & Summaries

Process Identifier: 1.3.8.3.3

Hierarchy Level: 4

Brief Description:

Distribute management reports and summaries on customer QoS and SLA degradation status and process effectiveness.

Extended Description:

Provide management reports on the status of customer QoS performance degradation reports. These processes analyze and assess the customer QoS performance degradation report status changes to provide management reports and any specialized summaries of the efficiency and effectiveness of the overall Customer QoS/SLA Management process. These specialized summaries could be specific reports required by specific audiences and/or customers.

Create Customer QoS Performance Degradation Report

Process Identifier: 1.3.8.4

Hierarchy Level: 3

Brief Description:

Create a new customer QoS performance degradation report.

Extended Description:

Not used for this process element

Create Customer QoS Report

Process Identifier: 1.3.8.4.1

Hierarchy Level: 4

Brief Description:

Create customer QoS performance degradation reports from customer notifications or other detected issues.

Extended Description:

Create a new customer QoS performance degradation report. A new customer QoS performance degradation report may be created as a result of specific customer initiated QoS performance degradation notifications, or at the request of analysis undertaken by other CRM, or SM&O processes which detect that some form of deterioration or failure has occurred requiring an assessment of the performance of the specific customer purchased product offering. If the customer QoS performance degradation report is created as a result of a notification from customers or as a result of a request from other processes, the Create Customer QoS Performance Degradation Report processes are responsible for converting the received information into a form suitable for the Customer QoS/SLA Management processes, and for requesting additional information if required.

Modify Customer QoS Report

Process Identifier: 1.3.8.4.2

Hierarchy Level: 4

Brief Description:

Modify existing customer QoS performance degradation reports.

Extended Description:

Not used for this process element

Request Cancellation of Customer QoS Report

Process Identifier: 1.3.8.4.3

Hierarchy Level: 4

Brief Description:

Request cancellation of existing customer QoS performance degradation reports.

Extended Description:

Not used for this process element

Track & Manage Customer QoS Performance Resolution

Process Identifier: 1.3.8.5

Hierarchy Level: 3

Brief Description:

Efficiently assign, coordinate and track specific customer purchased product offering related performance analysis, restoration and improvement activities, and escalate any open customer QoS performance degradation reports in jeopardy.

Extended Description:

The objective of the Track & Manage Customer QoS Performance Resolution processes is to efficiently assign, coordinate and track specific customer purchased product offering related performance analysis, restoration and improvement activities, and escalate any open customer QoS performance degradation reports in jeopardy. Responsibilities of these processes include, but are not limited to:

- Adding additional information to an open customer QoS performance degradation report based on the first-in and on-going analysis;
- Scheduling, assigning and coordinating analysis and specific customer QoS performance restoration activities and/or repair activities delegated to other processes;
- Generating the respective service trouble report creation request(s) to Create Service Trouble Report based on specific customer QoS performance degradation reports where analysis the root cause is related to services;
- Modifying information in an existing customer QoS performance degradation report based on assignments;
- Modifying the customer QoS performance degradation report status;

- Canceling a customer QoS performance degradation report when the specific request was related to a false performance event
- Monitoring the jeopardy status of open customer QoS performance degradation reports, and escalating customer QoS performance degradation reports as necessary.

Note that some specific product and/or service components may be owned and managed by other parties. In these cases the Track & Manage Customer QoS Performance Resolution process is responsible for initiating requests, through other parties Performance Management for resolution by the other parties of the specific service components.

These processes will co-ordinate all the actions necessary in order to guarantee that all tasks are finished at the appropriate time and in the appropriate sequence.

The Track & Manage Customer QoS Performance Resolution processes will also inform the Close Customer QoS Performance Degradation Report processes by modifying the customer QoS performance degradation report status to cleared when the specific customer purchased product offering performance quality issues have been resolved.

Update Customer QoS Report with Analysis Results

Process Identifier: 1.3.8.5.1

Hierarchy Level: 4

Brief Description:

Add additional information to an open customer QoS performance degradation report based on the first-in and on-going analysis.

Extended Description:

Not used for this process element

Co-ordinate Customer QoS Analysis, Restoration & Repair

Process Identifier: 1.3.8.5.2

Hierarchy Level: 4

Brief Description:

Schedule, assign and coordinate analysis and specific customer QoS performance restoration activities and/or repair activities delegated to other processes.

Extended Description:

Not used for this process element

Modify Customer QoS Report Information

Process Identifier: 1.3.8.5.3

Hierarchy Level: 4

Brief Description:

Modify information in an existing customer QoS performance degradation report based on assignments.

Extended Description:

Not used for this process element

Modify Customer QoS Report Status

Process Identifier: 1.3.8.5.4

Hierarchy Level: 4

Brief Description:

Modify the customer QoS performance degradation report status.

Extended Description:

Not used for this process element

Cancel Customer QoS Report

Process Identifier: 1.3.8.5.5

Hierarchy Level: 4

Brief Description:

Cancel a customer QoS performance degradation report when the specific request was related to a false performance event.

Extended Description:

Not used for this process element

Escalate/End Customer QoS Report

Process Identifier: 1.3.8.5.6

Hierarchy Level: 4

Brief Description:

Monitor the jeopardy status of open customer QoS performance degradation reports, and escalate customer QoS performance degradation reports as necessary.

Extended Description:

Not used for this process element

Engage External Product Suppliers

Process Identifier: 1.3.8.5.7

Hierarchy Level: 4

Brief Description:

In these cases, initiate requests, through the other party Performance Management for resolution by the other party of the specific service components.

Extended Description:

Note that some specific product and/or service components may be owned and managed by other Parties. In these cases, initiate requests, through the other party Performance Management for resolution by the other party of the specific service components. These processes will co-ordinate all the actions necessary in order to guarantee that all tasks are finished at the appropriate time and in the appropriate sequence.

Clear Customer QoS Report Status

Process Identifier: 1.3.8.5.8

Hierarchy Level: 4

Brief Description:

Update customer QoS report status to cleared when the quality issue has been resolved.

Extended Description:

Inform the Close Customer QoS Performance Degradation Report processes by modifying the customer QoS performance degradation report status to cleared when the specific customer purchased product offering performance quality issues have been resolved.

Close Customer QoS Performance Degradation Report

Process Identifier: 1.3.8.6

Hierarchy Level: 3

Brief Description:

Close a customer QoS performance degradation report when the performance of the customer purchased product offerings has been resolved.

Extended Description:

The objective of the Close Customer QoS Performance Degradation Report processes is to close a customer QoS performance degradation report when the performance of the customer purchased product offerings has been resolved.

These processes monitor the status of all open customer QoS performance degradation reports, and recognize that a customer QoS performance degradation report is ready to be closed when the status is changed to cleared.

Customer Problem Management

Process Identifier: 1.3.7

Hierarchy Level: 2

Brief Description:

Customer problem management business process directs and controls activities to resolve issues or complaints that customers may have with a products or service offerings.

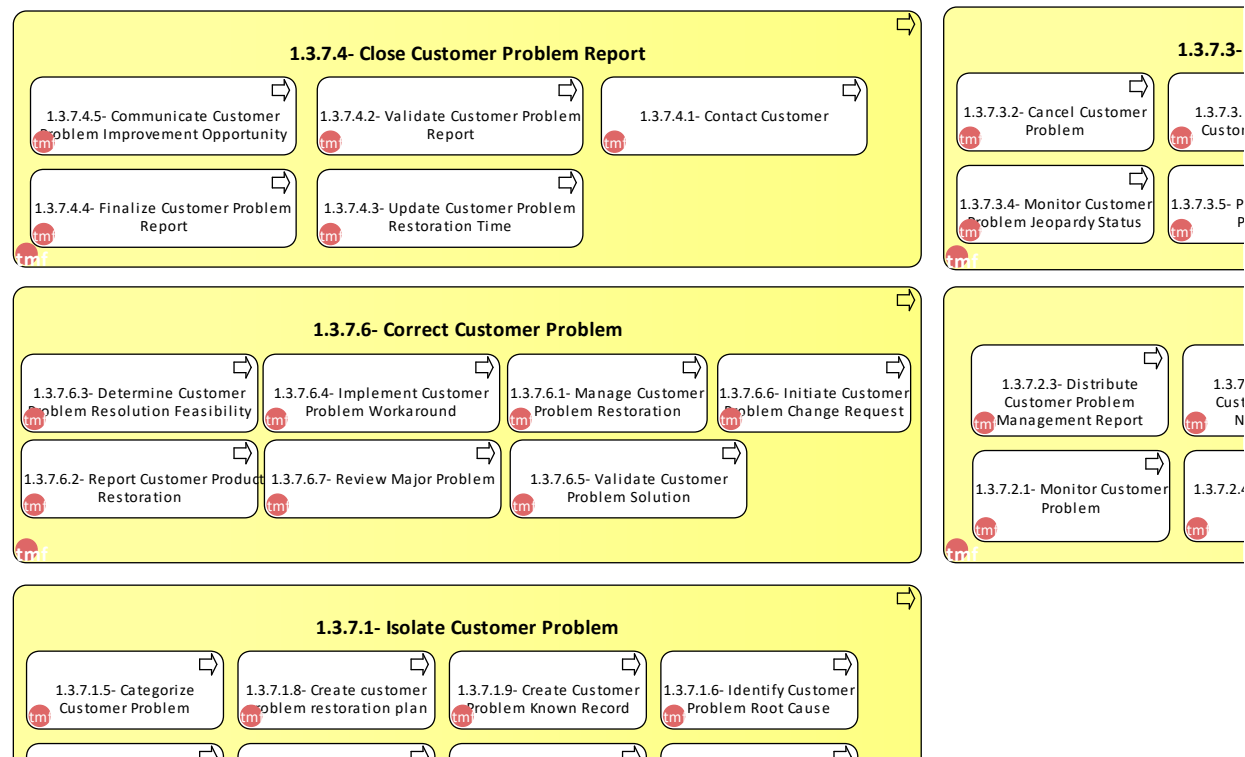

Figure 33: Customer Problem Management Children

Isolate Customer Problem

Process Identifier: 1.3.7.1

Hierarchy Level: 3

Brief Description:

Isolate Problem business activity is responsible for identifying the specific issue that the customer is facing.

Extended Description:

Isolate Customer Problem business activity will verify the use of the product, perform diagnostics while liaising with the customer, and identify the root cause of the problem. This is to enable the enterprise to understand the problem in detail so that it can be effectively addressed.

Verify Customer Product Configuration

Process Identifier: 1.3.7.1.1

Hierarchy Level: 4

Brief Description:

Verify Customer Product Configuration business activity is responsible for checking the customer's setup to ensure it's configured correctly.

Extended Description:

Verify Customer Product Configuration involves verifying the customer is using the product correctly and is aimed at ruling out any configuration issues that might be cause of the problem.

This process was renamed. old name was Verify Product Configuration

Diagnose Customer Problem

Process Identifier: 1.3.7.1.2

Hierarchy Level: 4

Brief Description:

Diagnose Customer Problem business activity is responsible for performing specific diagnostics to understand the root cause of the problem.

Extended Description:

Diagnose Customer Problem will identify what's causing the customer problem so that it can be fixed. It includes tasks to determine what the root cause of the customer problem is linked to.

this process was renamed in 23.5 old name was: Perform Specific Customer Problem Diagnostics

Conduct Customer Problem Test

Process Identifier: 1.3.7.1.3

Hierarchy Level: 4

Brief Description:

Conduct Customer Problem Test business activity responsible for performing specific tests related to the problem.

Extended Description:

Conduct Customer Problem Test will gather more information about the issue and confirm the diagnosis through tests conducted on related products, services and/or resources. Not used for this process element

This process was renamed in 23.5 old name was: Perform Specific Customer Problem Tests

Notify Customer Root Cause

Process Identifier: 1.3.7.1.4

Hierarchy Level: 4

Brief Description:

Notify Customer Problem Root Cause business activity is responsible for informing the relevant parties about the root cause of the problem.

Extended Description:

Notify Customer Problem Root Cause will ensure everyone is aware of the issue and can work towards a solution. It includes tasks to communicate the root cause and its impact to the stakeholders.

This process was renamed in 23.5. old name was Notify T&M Root Cause Customer Problem

Categorize Customer Problem

Process Identifier: 1.3.7.1.5

Hierarchy Level: 4

Brief Description:

Categorize Problem business activity is responsible for classifying the problem based on its nature and severity.

Extended Description:

Categorize Problem will prioritize and manage problems effectively. It includes tasks to assign the problem to a category and a subcategory based on predefined criteria.

Identify Customer Problem Root Cause

Process Identifier: 1.3.7.1.6

Hierarchy Level: 4

Brief Description:

Identify Customer Problem Root Cause business activity is responsible for determining the underlying cause of the customer problem.

Extended Description:

Identify Customer Problem Root Cause will address the root cause and prevent the problem from recurring. It includes tasks to analyze the customer problem and its symptoms and identify the source of the issue.

This process was renamed in 23.5. old name was: Identify Root Cause / Check for Workarounds

Obtain permanent fix or workarounds

Process Identifier: 1.3.7.1.7

Hierarchy Level: 4

Brief Description:

Obtain Customer Problem Fix business activity is responsible for finding a permanent solution or workaround for the customer problem.

Extended Description:

Obtain Customer Problem Fix will resolve the issue and restore normal service for the customer. It includes tasks to search for a known solution, develop a new solution, or apply a workaround.

This process was renamed in 23.5. old process name was Obtain permanent fix or workarounds

Create customer problem restoration plan

Process Identifier: 1.3.7.1.8

Hierarchy Level: 4

Brief Description:

Create Customer Problem Restoration Plan business activity is responsible for developing a plan to restore the customer's service.

Extended Description:

Create Restoration Customer Problem Restoration Plan will ensure the problem is resolved in a timely and efficient manner. It includes tasks to define the steps, resources, and timeline for the restoration process.

Create Customer Problem Known Record

Process Identifier: 1.3.7.1.9

Hierarchy Level: 4

Brief Description:

Create Customer Problem Known Record business activity is responsible for documenting the customer problem and its solution in a known error record.

Extended Description:

Create Customer Problem Known Record will help resolve similar issues in the future. It includes tasks to create and update a record that contains the problem description, root cause, and solution.

This process was renamed in 23.5 old name was Create Known record

Report Customer Problem

Process Identifier: 1.3.7.2

Hierarchy Level: 3

Brief Description:

Report Customer Problem business activity is responsible for reporting the problem to the relevant parties.

Extended Description:

Report Customer Problem will keep everyone informed about the issue and its status. It includes tasks to create and send a problem report that contains the problem details, impact, and resolution.

Monitor Customer Problem

Process Identifier: 1.3.7.2.1

Hierarchy Level: 4

Brief Description:

Monitor Customer Problem business activity is responsible for tracking the problem until it's resolved.

Extended Description:

Monitor Customer Problem will ensure the problem is being addressed and the customer is kept informed. It includes tasks to monitor the problem status, progress, and resolution.

Distribute Customer Problem Notifications

Process Identifier: 1.3.7.2.2

Hierarchy Level: 4

Brief Description:

Distribute Customer Problem Notification business activity is responsible for sending notifications about the problem to the relevant parties.

Extended Description:

Distribute Customer Problem Notifications will keep all stakeholder updated about the problem's status. It includes tasks to create and send notifications that contain the problem summary, impact, and resolution.

Distribute Customer Problem Management Report

Process Identifier: 1.3.7.2.3

Hierarchy Level: 4

Brief Description:

Distribute Customer Problem Management Reports business activity is responsible for sharing reports about the problem with the relevant parties. Distribute Reports will provide detailed information about the issue and its resolution.

Extended Description:

Distribute Customer Problem Management Report includes tasks to create and send reports that contain the problem analysis, root cause, and solution provided management reports, with any specialized summaries of the efficiency and effectiveness of the overall Customer Problem Management process. These specialized summaries could be specific reports required by specific audiences.

This process was renamed in 23.5 it was called Distribute Customer Problem Management Reports & Summaries

Notify Customer Problem

Process Identifier: 1.3.7.2.4

Hierarchy Level: 4

Brief Description:

Notify Customer Problem business activity is responsible for informing the customer about the problem.

Extended Description:

Notify Customer Problem will keep the customer informed and manage their expectations. It includes tasks to communicate the problem details, impact, and resolution to the customer.

Issue Customer Problem Management Summaries

Process Identifier: 1.3.7.2.5

Hierarchy Level: 4

Brief Description:

Issue Customer Problem Management Summary business activity is responsible for providing summaries of the problem to the relevant parties.

Extended Description:

Issue Customer Problem Management Summary will provide specialized overviews of the issue. It includes tasks to create and send summaries that contain the problem description, status, and resolution.

Generate Customer Problem Management Reports

Process Identifier: 1.3.7.2.6

Hierarchy Level: 4

Brief Description:

Generate Customer Management Problem Reports business activity is responsible for creating detailed reports about the customer problem.

Extended Description:

Generate Customer Management Problem Report will document customer problems, impact, and resolution based on specific audience. It includes tasks to create and formalize problem reporting, save reports that contain the problem analysis, root cause, and solution.

Manage Customer Problem Coordination

Process Identifier: 1.3.7.3

Hierarchy Level: 3

Brief Description:

Manage Customer Problem Coordination business activity is responsible for monitoring /tracking the problem's ensuring that recovery activities are assigned, coordinated and tracked efficiently with escalations invoked as required.

Manage Customer Problem Coordination will ensure the problem is being addressed in a timely manner. It includes tasks to schedule, assign and coordinate customer problem recovery activities, generating respective trouble repots, managing update to information systems, cancelling customer problem report and monitoring the jeopardy status/problem status, progress, and resolution

Extended Description:

Manage Customer Problem Coordination will ensure the problem is being addressed in a timely manner. It includes tasks to schedule, assign and coordinate customer problem recovery activities, generating respective trouble repots, managing update to information systems, cancelling customer problem report and monitoring the jeopardy status/problem status, progress, and resolution.

This process was renamed in 23.5. old process name was Track & Manage Customer Problem

Coordinate Customer Problem

Process Identifier: 1.3.7.3.1

Hierarchy Level: 4

Brief Description:

Coordinate Customer Problem business activity is responsible for managing the activities and efforts to resolve the problem.

Extended Description:

Coordinate Customer Problem will ensure all tasks such as scheduling, assigning, and coordinating any recovery activities effectively. It includes tasks to coordinate the activities, resources, and communication for customer problem resolution.

Cancel Customer Problem

Process Identifier: 1.3.7.3.2

Hierarchy Level: 4

Brief Description:

Cancel Customer Problem business activity is responsible for closing the problem report if the issue is resolved or no longer relevant.

Extended Description:

Cancel Customer Problem will keep the problem management system up to date. It includes tasks to annul the problem report and update the problem status.

Escalate Customer Problem

Process Identifier: 1.3.7.3.3

Hierarchy Level: 4

Brief Description:

Escalate Customer Problem business activity is responsible for raising the problem to a higher level of management if it can't be resolved at the current level.

Extended Description:

Escalate Customer Problem will ensure the problem is addressed by the right people. It includes tasks to escalate the problem to the appropriate authority and communicate the escalation details.

This process was renamed in 23.5. Old name was Escalate/End Customer Problem

Monitor Customer Problem Jeopardy Status

Process Identifier: 1.3.7.3.4

Hierarchy Level: 4

Brief Description:

Monitor Customer Problem Jeopardy Status business activity is responsible for tracking any risks or issues that could delay the resolution of the problem.

Extended Description:

Monitor Customer Problem Jeopardy Status will proactively manage any potential delays. It includes tasks to identify, assess, and mitigate any jeopardy factors and update the problem status accordingly.

Prioritize Customer Problem

Process Identifier: 1.3.7.3.5

Hierarchy Level: 4

Brief Description:

Prioritize Customer Problem business activity is responsible for determining the importance of the problem based on its impact and urgency.

Extended Description:

Prioritize Customer Problem will ensure high-priority problems are addressed first. It includes tasks to assign a priority level to the problem and allocate the necessary resources and time for its resolution.

Close Customer Problem Report

Process Identifier: 1.3.7.4

Hierarchy Level: 3

Brief Description:

Close Customer Problem Report business activity is responsible for closing the problem report once the issue is resolved following a communication with the customer.

Extended Description:

Close Report will keep the customer problem management up to date and includes tasks to monitor the status of all open customer problem reports, verify the customer problem resolution, update the customer problem status, and close the problem report according to outcome of processes.

Contact Customer

Process Identifier: 1.3.7.4.1

Hierarchy Level: 4

Brief Description:

Contact Customer business activity is responsible for reaching out to the customer to inquire about the customers satisfaction with resolution of the problem.

Extended Description:

Contact Customer will keep the customer informed and manage their expectations. It includes tasks to communicate the problem details, resolution steps, and soliciting feedback from the customer.

Validate Customer Problem Report

Process Identifier: 1.3.7.4.2

Hierarchy Level: 4

Brief Description:

Validate Customer Problem Report business activity is responsible for checking the problem report to ensure it's accurate and complete.

Extended Description:

Validate Customer Problem Report will maintain the integrity of the customer problem management processes that includes tasks to review the problem report, correct any errors, and confirm the report validity.

This process was renamed in 23.5. Old name was Complete and Validate Customer Problem Report

Update Customer Problem Restoration Time

Process Identifier: 1.3.7.4.3

Hierarchy Level: 4

Brief Description:

Update Customer Problem Restoration Time business activity is responsible for updating the estimated time to restore service.

Extended Description:

Update Customer Problem Restoration Time will manage expectations and plan the resolution process. It includes tasks to calculate the restoration time based on the problem complexity and resources and update the problem report and customer accordingly.

This process was 23.5 Name was Update Time to Restore Service

Finalize Customer Problem Report

Process Identifier: 1.3.7.4.4

Hierarchy Level: 4

Brief Description:

Finalize Customer Problem Report business activity is responsible for completing the problem report with all the relevant details.

Extended Description:

Finalize Customer Problem Report will document the problem and its resolution for future reference. It includes tasks to fill in the problem report with the resolution details, root cause analysis, and lessons learned.

Communicate Customer Problem Improvement Opportunity

Process Identifier: 1.3.7.4.5

Hierarchy Level: 4

Brief Description:

Communicate Customer Problem Improvement Opportunity business activity is responsible for sharing any opportunities for improvement identified during the customer problem management process.

Extended Description:

Communicate Customer Problem Improvement will continuously improve the service. It includes tasks to identify, document, and communicate any improvement suggestions or best practices to the relevant stakeholders.

This process was renamed in 23.5. old name was Communicate Service improvement Opportunity

Create Customer Problem Report

Process Identifier: 1.3.7.5

Hierarchy Level: 3

Brief Description:

Create Customer Problem Report business activity is responsible for creating a new customer problem report that details the customer's problem as a reaction to a report or inferred from other processes.

Extended Description:

Create Problem Report will document the issue for tracking and future reference. It includes tasks to collect the problem information, create the problem report, and assign the problem ID.

Generate Customer Problem Report

Process Identifier: 1.3.7.5.1

Hierarchy Level: 4

Brief Description:

Generate Customer Problem Report business activity is responsible for producing a detailed report about the problem.

Extended Description:

Generate Customer Problem Report will provide comprehensive information about the issue and its resolution. It includes tasks to retrieve the problem report, generate the report output, and distribute the report to the intended recipients.

Obtain Customer Problem Configuration

Process Identifier: 1.3.7.5.2

Hierarchy Level: 4

Brief Description:

Obtain Customer Problem Configuration business activity is responsible for getting the configuration details related to the problem.

Extended Description:

Obtain Customer Problem Configuration will understand the setup and identify any configuration issues. It includes tasks to access the configuration management system, query the configuration items, and analyze the configuration data.

This process was renamed in 23.5. it was named Obtain Configuration Information

Check Customer Problem Outage

Process Identifier: 1.3.7.5.3

Hierarchy Level: 4

Brief Description:

Check Customer Problem Outage business activity is responsible for checking if the problem is causing a major outage.

Extended Description:

Check Customer Problem Outage will understand the impact of the problem and prioritize its resolution. It includes tasks to compare the problem scope with the outage criteria, determine the outage status, and update the problem report and customer accordingly.

This process was renamed in 23.5. it was named Check for major outage

Correct Customer Problem

Process Identifier: 1.3.7.6

Hierarchy Level: 3

Brief Description:

Correct Customer Problem business activity is responsible for fixing the problem with a goal of resolving the customer problem.

Extended Description:

Correct Customer Problem will restore normal service for the customer. It includes tasks to apply the resolution steps, test the resolution effectiveness, and confirm the problem resolution.

This process was renamed in 23.5. it was called Correct & Recover Customer Problem

Manage Customer Problem Restoration

Process Identifier: 1.3.7.6.1

Hierarchy Level: 4

Brief Description:

Manage Customer Problem Restoration business activity is responsible for directing and controlling oversight of the process of restoring a customer problem.

Extended Description:

Manage Customer Problem Restoration will ensure the problem is resolved and service is restored promptly. It includes tasks to coordinate the restoration activities, monitor the restoration progress, and report the restoration status.

This process was renamed in 23.5. old name was Manage Product Restoration

Report Customer Product Restoration

Process Identifier: 1.3.7.6.2

Hierarchy Level: 4

Brief Description:

Report Customer Product Restoration business activity is responsible for creating a structured communication of the results of the customer problem restoration efforts.

Extended Description:

Report Customer Product Restoration will keep everyone informed about the status of the service. It includes tasks to document the restoration details, communicate the restoration results, and update the problem report and customer accordingly.

This process was renamed in 23.5. old name was Report Product Restoration Results

Determine Customer Problem Resolution Feasibility

Process Identifier: 1.3.7.6.3

Hierarchy Level: 4

Brief Description:

Determine Customer Problem Resolution Feasibility business activity is responsible for deciding on the best way to resolve the customer problem.

Extended Description:

Determine Customer Problem Resolution Feasibility will find the most effective and efficient solution. It includes tasks to evaluate the possible solutions, select the optimal one, and plan the implementation steps.

This process was renamed in 23.5. old name was Determine Resolution Feasibility and Justification

Implement Customer Problem Workaround

Process Identifier: 1.3.7.6.4

Hierarchy Level: 4

Brief Description:

Implement Workaround business activity is responsible for applying a temporary fix to the problem with a goal is to restore service as quickly as possible while a permanent solution is being found.

Extended Description:

Implement Workaround will restore service as quickly as possible while a permanent solution is being found. It includes tasks to identify, apply, and document the workaround.

Validate Customer Problem Solution

Process Identifier: 1.3.7.6.5

Hierarchy Level: 4

Brief Description:

Validate Customer Problem Solution business activity is responsible for testing the implemented solution to ensure it has resolved the problem with a goal of confirming the problem has been fixed.

Extended Description:

Validate Customer Problem Solution will confirm the problem has been fixed. It includes tasks to verify the solution effectiveness, measure the resolution results, and obtain customer feedback.

This process was renamed in 23.5 old process was Test & Validate Implemented Solution

Initiate Customer Problem Change Request

Process Identifier: 1.3.7.6.6

Hierarchy Level: 4

Brief Description:

Initiate Customer Problem Change Request business activity is responsible for starting a change request if the problem's resolution requires a change with the goal of managing changes in a controlled manner.

Extended Description:

Initiate Customer Problem Change Request will manage changes in a controlled manner by starting a change request if the problem's resolution requires a change. It includes tasks to create, submit, and approve the change request.

This process was renamed in 23.5. old name was Initiate Change Request

Review Major Problem

Process Identifier: 1.3.7.6.7

Hierarchy Level: 4

Brief Description:

Review Major customer Problem business activity is responsible for assessing major customer problems to understand their cause and impact with the goal of learning from these issues and prevent them from recurring.

Extended Description:

Review Major Customer Problem will learn from these issues and prevent them from recurring. It includes tasks to review the root cause analysis, correlate the lessons learned, and recommend the improvement actions giving an understanding of the cause and impact.

This process was renamed in 23.5. old name was Review Major Customer Problem

Customer Privacy Management

Process Identifier: 1.3.21

Hierarchy Level: 2

Brief Description:

Customer Privacy Management processes manage the privacy requirements of customers in accordance with customers' information privacy requirements, and regulatory mandates.

Extended Description:

Customer Privacy Management processes manage the privacy requirements of customers in accordance with customers' information privacy requirements, and regulatory mandates. These processes help to:

- Define the Customer Privacy Management scope,

- create capabilities to design internal views of Customer Journey templates to which particular customer engagements can be mapped and processed for multiple interactions, multiple channels, multiple intents.

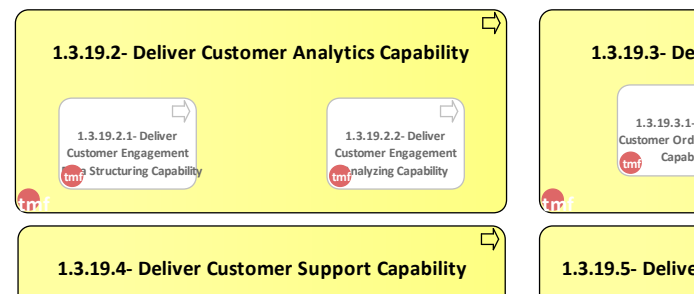

Figure 35: Customer Management Capability Delivery Children

Deliver Customer Analytics Capability

Process Identifier: 1.3.19.2

Hierarchy Level: 3

Brief Description:

Deliver Customer Analytics Capability processes implement the supporting processes and technology needed to effectively generate and retrieve insights from customer activities.

Extended Description:

Deliver Customer Analytics Capability processes implement the supporting processes and technology needed to effectively generate and retrieve insights from customer activities.

Deliver Customer Analytics Capability ensures the organization has the capabilities e.g., skills, processes and technology to effectively operationalize analytics.

Such capabilities enable the design and implementation of structures and resources required to operationalize the collection and analysis of customer engagement data, and generation of customer insights needed to make predictions of customer events/activities, and generate recommendations to customers.

Was named Customer Analytics Capability Delivery

Deliver Customer Engagement Data Structuring Capability

Process Identifier: 1.3.19.2.1

Hierarchy Level: 4

Brief Description:

Deliver Customer Engagement Data Structuring Capability processes implement the capabilities to identify, structure, and make the structures of customer events/activities data prepared for analysis.

Extended Description:

Deliver Customer Engagement Data Structuring Capability processes implement the supporting processes and technology to identify and structure customer engagement data, and to make the structures of customer events/activities data ready for analysis.

Deliver Customer Engagement Analyzing Capability

Process Identifier: 1.3.19.2.2

Hierarchy Level: 4

Brief Description:

Deliver Customer Engagement Analyzing Capability processes implement the capabilities necessary to analyze the customer engagement data in order to discover insights about customers related to the customer's products, customer segment and customer journey.

Extended Description:

Deliver Customer Engagement Analyzing Capability processes implement the organization, supporting processes and technology necessary to analyze the customer engagement data in order to discover insights about customers and the customers' interactions with the company, related to the customer's products, customer segment and customer journey.

Deliver Customer Order Capability

Process Identifier: 1.3.19.3

Hierarchy Level: 3

Brief Description:

Deliver Customer Order Capability processes ensure there are capabilities to meet customer's expectations of order interactions and management across all channels and products.

Extended Description:

Deliver Customer Order Capability processes ensure there are capabilities such as processes and technology to meet customer's expectations of order interactions and management across all channels and products.

This set of processes ensure the organization implements the capability to sense and manage customer demand accurately, respond to changing delivery expectations, and to accurately manage promised timelines based on fulfillment planning lead times and estimates.

Was named Deliver Customer Order Capability

Deliver Customer Order Carry Through Capability

Process Identifier: 1.3.19.3.2

Hierarchy Level: 4

Brief Description:

Deliver Customer Order Carry Through Capability processes ensure there are organizations, processes and technology to monitor customer order delivery progress, to secure delivery according to promised timelines, and engage with the customer in case of changes.

Extended Description:

Deliver Customer Order Carry Through Capability processes ensure there are organizations, processes and technology to monitor customer order delivery progress, to secure delivery according to promised timelines, and engage with the customer and respond to changing delivery expectations, and to accurately manage promised timelines based on fulfillment planning lead times and estimates.

Deliver Customer Order Creation Capability

Process Identifier: 1.3.19.3.1

Hierarchy Level: 4

Brief Description:

Deliver Customer Order Creation Capability processes ensure the organization has the capability to create and change customer orders for all channels and products.

Extended Description:

Deliver Customer Order Creation Capability processes ensure there are organizations, processes and technology to meet customer expectations of orders across all channels and products.

This set of processes ensure the organization implements the capability to sense and manage customer demand accurately, to create and change the customer orders.

Deliver Customer Support Capability

Process Identifier: 1.3.19.4

Hierarchy Level: 3

Brief Description:

Deliver Customer Support Capability processes ensure the organization has the capabilities required to ensure customer support in a timely, effective and reliable way to customers.

Extended Description:

Deliver Customer Support Capability processes enable planning and effective delivery of the total capabilities required to ensure customer support in a timely, effective and reliable way to meet all existing and potential customer needs for products and services offered.

This involves integration of capabilities available from within the enterprise, as well as from external parties.

Was named Customer Support Capability Delivery

Deliver Customer Support Delivery Capability

Process Identifier: 1.3.19.4.1

Hierarchy Level: 4

Brief Description:

Deliver Customer Support Delivery Capability processes enable planning and effective delivery of capabilities required to deliver support to customers in a timely, effective and reliable way.

Extended Description:

Deliver Customer Support Delivery Capability processes enable planning and effective delivery of the total capabilities required to ensure customer support in a timely, effective and reliable way to meet all existing and potential customer needs for products and services offered.

The customer support capabilities can include dedicated organization, established processes and technology delivered from within the enterprise, and/or capabilities delivered from an external party.

Deliver Customer Support Integration Capability

Process Identifier: 1.3.19.4.2

Hierarchy Level: 4

Brief Description:

"Deliver Customer Support Integration Capability processes

ensure that the support capabilities are well integrated regardless if they are delivered from within the enterprise, or delivered from an external party."

Extended Description:

Deliver Customer Support Integration Capability processes

ensure that the support capabilities are well integrated regardless if they are delivered from within the enterprise, or delivered from an external party.

The integration can include dedicated organization, established processes and technology to uphold an effective reliable customer support consisting of multiple support suppliers.

Deliver Customer Engagement Capability

Process Identifier: 1.3.19.5

Hierarchy Level: 3

Brief Description:

Deliver Customer Engagement Capability processes ensure the organization has the capabilities required to design and use internal views of Customer Journey templates to which particular customer engagements can be mapped and processed.

Extended Description:

Deliver Customer Engagement Capability processes are responsible for designing the capabilities required to design and use internal views and Customer Journey templates to which particular customer engagements can be mapped and processed.

Customer engagement has multiple interactions, multiple channels and multiple intents. The Deliver Customer Engagement Capability process creates capabilities to align specific engagement needs and also simplify Customer Journey views so that similar engagements can be unified into common process flows.

was named Customer Engagement Capability Delivery

Deliver Customer Journey Mapping and Processing Capability

Process Identifier: 1.3.19.5.2

Hierarchy Level: 4

Brief Description:

"Deliver Customer Journey Mapping and Processing Capability

process creates the capability to map customer engagements to customer journey templates and determining the next step in customer journey."

Extended Description:

Deliver Customer Journey Mapping and Processing Capability

process creates the capability to map customer engagements to customer journey templates and determining the next step in customer journey.

The journey path from trigger event to outcome is determined during the execution based on the choices made by the autonomous customer and the mapped template.

Deliver Customer Journey Template Capability

Process Identifier: 1.3.19.5.1

Hierarchy Level: 4

Brief Description:

Deliver Customer Journey Template Capability

processes focus on creating the journey phase templates linked with the concept of engagement events that are created and designed together by the business and IT.

The process builds different journey phase templates for each engagement event.

Extended Description:

Deliver Customer Journey Template Capability

processes focus on creating the journey phase templates linked with the concept of engagement events that are created and designed together by the business and IT.

Identify Relevant Customer Inventory Information

Process Identifier: 1.3.16.1

Hierarchy Level: 3

Brief Description:

Identifying the inventory-relevant information requirements to be captured for customers.

Extended Description:

Not used for this process element

Maintain Customer Inventory facilities

Process Identifier: 1.3.16.2

Hierarchy Level: 3

Brief Description:

Identifying, establishing and maintaining customer inventory repository facilities.

Extended Description:

Not used for this process element

Manage Customer Inventory Capture

Process Identifier: 1.3.16.3

Hierarchy Level: 3

Brief Description:

Establishing and managing the customer inventory management and information capture processes.

Extended Description:

Not used for this process element

Control Customer Inventory Access

Process Identifier: 1.3.16.4

Hierarchy Level: 3

Brief Description:

Managing the registration and access control processes that enable processes to create, modify, update, delete and/or download customer data to and from the customer inventory.

Extended Description:

Not used for this process element

Ensure Customer Inventory Data Quality

Process Identifier: 1.3.16.5

Hierarchy Level: 3

Brief Description:

Ensure the accuracy, completeness, and quality of data maintained in the customer inventory repository.

Extended Description:

Ensuring the customer inventory repository accurately captures and records all identified customer details, through use of automated or manual audits. Monitoring and reporting on the quality of the data maintained in the inventory. The customer inventory maintains records of all customers, their interactions with the enterprise, any contracts established, and any other customer related- information, required to support CRM and other processes.

Track Customer Inventory Usage

Process Identifier: 1.3.16.6

Hierarchy Level: 3

Brief Description:

Tracking and monitoring of the usage of, and access to, the customer inventory repository and associated costs, and reporting on the findings

Extended Description:

Not used for this process element

Identify Customer Inventory Shortcomings

Process Identifier: 1.3.16.7

Hierarchy Level: 3

Brief Description:

Identifying any technical driven shortcomings of the customer inventory repository, and providing input to Resource Development & Management processes to rectify these issues.

Extended Description:

Not used for this process element

Customer Interaction Management

Process Identifier: 1.3.5

Hierarchy Level: 2

Brief Description:

Manage interactions between the customer and the enterprise. Interactions can be triggered by the customer or by the enterprise.

Extended Description:

The purpose of this process is to manage interactions between the customer and the enterprise. Interactions can be triggered by the customer (as a result of customer query or complaint) or by the enterprise (for example sending bills or other customer notifications.) All customer interactions are logged by the enterprise in order to provide a full track record of customer activity to the enterprise representatives. Customer interactions may be short lived (such as in the case of a query that is answered immediately) or may take long time to complete (such as in the case of complex orders or requests concerning back office intervention). When interactions are long the process is in charge of making sure the customer is notified in a timely manner about the progress of her request. Customer interaction history may be used by BI systems in order to gather information about customer profile and satisfaction. Customer interactions can span over multiple channels (such as: phone calls, web self service and devices.) each party involved in the interaction has a role that mandates its credentials. For some interactions users may need to login/authenticate themselves in order to get the appropriate role.

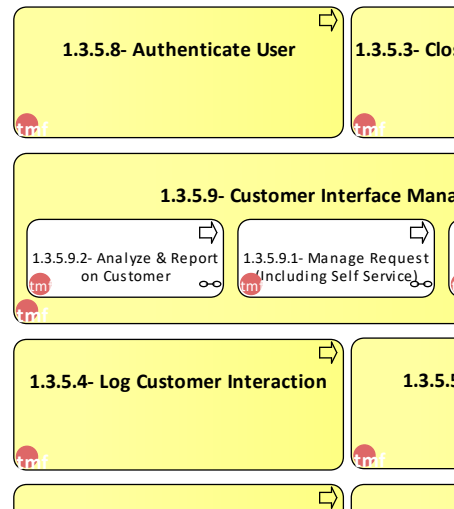

Figure 37: Customer Interaction Management Children

Create Customer Interaction

Process Identifier: 1.3.5.1

Hierarchy Level: 3

Brief Description:

Create a record that logs the customer interaction.

Extended Description:

The purpose of this process is to create a record that logs the customer interaction. The customer interaction can be initiated by the customer or by the enterprise.

Update Customer Interaction

Process Identifier: 1.3.5.2

Hierarchy Level: 3

Brief Description:

Update the customer interaction.

Extended Description:

The purpose of this process is to update the customer interaction, typically when additional action is carried out during long-lived interactions. When the customer should be notified about the update, this process triggers the Notify Customer process to perform the notification.

Close Customer Interaction

Process Identifier: 1.3.5.3

Hierarchy Level: 3

Brief Description:

Close the customer interaction.

Extended Description:

The purpose of this process is to close the customer interaction when both parties agree that the interaction is closed.

Log Customer Interaction

Process Identifier: 1.3.5.4

Hierarchy Level: 3

Brief Description:

Record and maintain all information about the customer interaction.

Extended Description:

The purpose of this process is to record and maintain all information about the customer interaction. This information can be used in future interaction or as input for data analysis processes.

Notify Customer

Process Identifier: 1.3.5.5

Hierarchy Level: 3

Brief Description:

Notify the customer when interesting events happen.

Extended Description:

The purpose of this process is to notify the customer when events related to existing interactions or to significant customer experience happen. Some notifications can be sent immediately using interactive media (such as SMS, Push to applications, etc.) and other notifications can be sent later using asynchronous media such as mail.

Track and Manage Customer Interaction

Process Identifier: 1.3.5.6

Hierarchy Level: 3

Brief Description:

Ensure that Customer Interactions are managed and tracked efficiently.

Extended Description:

The purpose of this process is to ensure that Customer Interactions are managed and tracked efficiently across all interaction channels in order to meet the agreed SLA with the customer. Responsibilities of these process include but are not limited to:

- Ensure interactions are completed and closed in a timely manner
- Notify the customer when SLA or deadlines can not be met
- Track customer responses when these are required
- Measure KPIs in order to improve the Interactions efficiency.

Report Customer interaction

Process Identifier: 1.3.5.7

Hierarchy Level: 3

Brief Description:

Monitor the status of a customer interaction.

Extended Description:

The purpose of this process is to monitor the status of a customer interaction, provide notifications of any changes and provide management report. These processes record, analyze and assess the customer interaction status changes to provide management reports and any specialized summaries of the efficiency and effectiveness of the overall Customer Interaction Management process. These specialized summaries could be specific reports required by specific customers.

Authenticate User

Process Identifier: 1.3.5.8

Hierarchy Level: 3

Brief Description:

Authenticate the person involved in the interaction.

Extended Description:

The purpose of this process is to authenticate the person involved in the interaction from the customer side. In self service channels the user may need to login in order to authenticate himself, in other channels the user may need to answer identity verification questions.

Customer Interface Management

Process Identifier: 1.3.5.9

Hierarchy Level: 3

Brief Description:

Managing all interfaces between the enterprise and potential and existing customers.

Extended Description:

Customer Interface Management processes are responsible for managing all interfaces between the enterprise and potential and existing customers. They deal with contact management, understanding the reason for contact, directing customer contacts to the appropriate process, contact closure, exception management, contact results analysis and reporting. CRM contact may be related to one or several of Service Fulfillment, Service Assurance (service quality management and trouble or problem management) and Billing related customer enquiries or contacts.

Analyze & Report on Customer

Process Identifier: 1.3.5.9.2

Hierarchy Level: 4

Brief Description:

Perform all necessary analysis on closed requests and on customer contacts and generate related reports.

Extended Description:

The purpose of this process is to perform all necessary analysis on closed (completed or unfulfilled) requests and on customer contacts and it generates related reports, to be utilized for process improvement activities, proactive problems prevention, up-sell opportunities definition, etc.

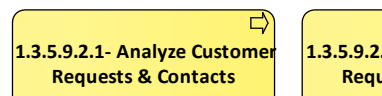

Figure 38: Analyze & Report on Customer Children

Analyze Customer Requests & Contacts

Process Identifier: 1.3.5.9.2.1

Hierarchy Level: 5

Brief Description:

Perform all necessary analysis on closed (completed or unfulfilled) requests and on customer contacts.

Extended Description:

Not used for this process element

Report Customer Requests & Contacts

Process Identifier: 1.3.5.9.2.2

Hierarchy Level: 5

Brief Description:

Generates related reports, to be utilized for process improvement activities, proactive problems prevention, up-sell opportunities definition, etc.

Extended Description:

Not used for this process element

Manage Request (Including Self Service)

Process Identifier: 1.3.5.9.1

Hierarchy Level: 4

Brief Description:

Manage all requests (inbound and outbound) made by potential and existing customers

Extended Description:

The purpose of this process is to manage all requests (inbound and outbound) made by potential and existing customers. It receives the request and either enables its originator to automatically fulfill it, or identifies and activates the opportune process to accomplish the request; it manages the status of the request and is able to provide status information at any moment in which the request is active; it formally closes the request when all related activities have been terminated.

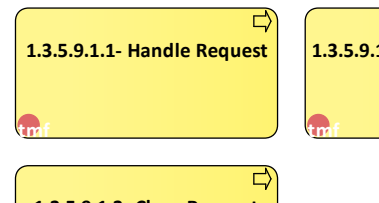

Figure 39: Manage Request (Including Self Service) Children

Handle Request

Process Identifier: 1.3.5.9.1.1

Hierarchy Level: 5

Brief Description:

Receives the request and either enables its originator to automatically fulfill it, or identifies and activates the opportune process to accomplish the request.

Extended Description:

Not used for this process element

Provide Request Status

Process Identifier: 1.3.5.9.1.2

Hierarchy Level: 5

Brief Description:

Manages the status of the request and is able to provide status information at any moment in which the request is active.

Extended Description:

Not used for this process element

Close Request

Process Identifier: 1.3.5.9.1.3

Hierarchy Level: 5

Brief Description:

Formally closes the request when all related activities have been terminated.

Extended Description:

Not used for this process element

Mediate & Orchestrate Customer Interactions

Process Identifier: 1.3.5.9.3

Hierarchy Level: 4

Brief Description:

Ensure that transaction message structure and interactions conform to agreed, externally defined standards used by the enterprise and its customers.

Extended Description:

The purpose of the Mediate & Orchestrate Customer Interactions is to ensure that transaction message structure and interactions conform to agreed, externally defined standards used by the enterprise and its customers. Increasingly transactions with external parties (e.g. customers using RosettaNet or Web Services standards) will need to conform to message and data formats defined by third parties or third party organizations. Based on the specific transaction type and involved external party, this conformance will require the identification of the necessary data formats to be sent externally, and conversion of externally received messages into the required internal enterprise formats. In addition, interactions with external parties may require that messages and transactions need to be undertaken with defined and agreed orchestration for message exchange. The actual agreement between the parties to use specific interaction standards is part of the Support Customer Interface Management and Support Selling L3s.

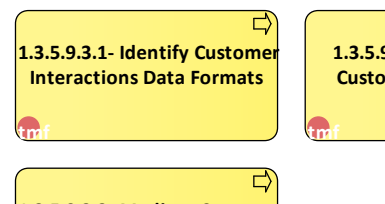

Figure 40: Mediate & Orchestrate Customer Interactions Children

Identify Customer Interactions Data Formats

Process Identifier: 1.3.5.9.3.1

Hierarchy Level: 5

Brief Description:

Identify the external interaction data formats required to support customer transactions and agreed standards.

Extended Description:

Performs identification of the necessary data formats to be sent externally. Increasingly transactions with external parties (e.g. customers using RosettaNet or Web Services standards) will need to conform to message and data formats defined by third parties or third party organizations. The actual agreement between the parties to use specific interaction standards is part of the Support Customer Interface Management and Support Selling L3s.

Orchestrate Customer Interactions

Process Identifier: 1.3.5.9.3.2

Hierarchy Level: 5

Brief Description:

Where required, orchestrates interactions with external parties so that messages and transactions are undertaken with defined and agreed orchestration for message exchange.

Extended Description:

Not used for this process element

Mediate Customer Interactions

Process Identifier: 1.3.5.9.3.3

Hierarchy Level: 5

Brief Description:

Manages conversion of externally received messages into the required internal enterprise formats, based on the specific transaction type and involved external party.

Extended Description:

Not used for this process element

Customer Information Management

Process Identifier: 1.3.6

Hierarchy Level: 2

Brief Description:

Manage customer information after customer contracts or associated service orders have been finalized and during the order completion phase. Ensure that any customer information required by other CRM processes is updated as part of the customer order completion.

Extended Description:

The purpose of this process is to record and maintain customer information in the CSP in order to:

- Support day to day operation of CSP

- Enable SP to provide best customer experience
- Support customer segmentation for successful marketing campaign
- Support analytical systems such as churn and fraud

When the customer information is not needed any more by the online systems (according to CSP policies and regulation) this process is in charge of archiving the information (if accepted to the customer).

Figure 41: Customer Information Management Children

Create Customer Record

Process Identifier: 1.3.6.1

Hierarchy Level: 3

Brief Description:

Create a new customer record in the customer inventory.

Extended Description:

The purpose of this process is to create a new customer record in the customer inventory. This process follows the processes in Establish Customer Relationship that make sure that a single record is created for each customer, and it persists the customer data in the customer inventory.

Update Customer Data

Process Identifier: 1.3.6.2

Hierarchy Level: 3

Brief Description:

Update the customer data in the customer inventory.

Extended Description:

The purpose of this process is to update the customer data in the customer inventory. This can happen as a result of direct notification from the customer, as a result of information gathered as part of other processes (such as selling and order handling) or as a result of back office processes (such as customer data cleansing).

Notify Customer Data Change

Process Identifier: 1.3.6.3

Hierarchy Level: 3

Brief Description:

Notify other processes that customer data has been changed.

Extended Description:

The purpose of this process is notify other processes that customer data has been changed. Other processes (mostly long-lived processes) might need to know about such changes in order to adapt to such changes. In addition some processes which gather the data for centralized systems (such as Data Warehouse or Master Data Management) should be notified about such changes.

Archive Customer Data

Process Identifier: 1.3.6.4

Hierarchy Level: 3

Brief Description:

Archive the customer data.

Extended Description:

The purpose of this process is to archive and clean up customer data when it is no longer needed as part of the customer inventory. The information is archived according to the CSP policies and the local regulations. In most cases customer information is not deleted unless this is specifically required by the customer.

Build a unified customer view

Process Identifier: 1.3.6.5

Hierarchy Level: 3

Brief Description:

Create a single customer record from the information stored in multiple systems and present a single, most updated record of the customer information.

Extended Description:

The purpose of this process is to create a single customer record from the information stored in multiple systems and present a single, most updated record of the customer information. This process invokes business rules in order to reconcile the customer data in a single accurate record. This process may be activated immediately upon any update of customer data or may be invoked on request to retrieve the customer data. This process may replicate data from other systems or calculate the unified record on the fly without persisting any customer data.

Customer Experience Management

Process Identifier: 1.3.2

Hierarchy Level: 2

Brief Description:

The purpose of the Customer Experience Management (CEM) process is to create and drive a customer-centric culture to engender positive customer experience through journey design, experience perception, as well as tracking, overseeing and managing every interaction—both direct and indirect—between the customer and the organization throughout the customer lifecycle. Furthermore, CEM processes put customers at the center of marketing, sales and customer support in order to drive brand loyalty and customer satisfaction.

Extended Description:

Customer Experience Management (CEM) is the collection of processes a company uses to track, oversee and organize every interaction between its customers and the organization throughout the customer lifecycle process. The purpose of CEM processes is to create and drive a customer-centric culture to engender positive customer experience through journey design, experience perception, as well as tracking, overseeing and managing every interaction—both direct and indirect—between the customer and the organization throughout the customer lifecycle. Furthermore, CEM processes put customers at the center of marketing, sales and customer support in order to drive brand loyalty and customer satisfaction.

The customer experience (CE) is comprised of a variety of elements, such as: cognitive, emotional, physical, sensorial, and social. CE is based on two key components. The first key component is the experience delivery in all direct interactions throughout the CSP's engagement and communication, products and/or services which apply in the above-described elements.

The second key component is the measurement and management of the perception by the customer, including indirect interactions with the customer in which customer perception and knowledge play a strong role.

CEM processes guide voice of the customer (VoC) programs to quantify customer sentiment about their experiences with a company; they provide support for the adjustment of elements of the customer experience that generate knowledge to improve CE. CEM processes promote and support a 360-degree view of customers, with integrated, up-to-date data on customer accounts.

The overall customer experience represents the full set of customer interactions across all customer journeys, it can be expressed as a set of qualitative and quantitative experience attributes. The set of attributes represents a calculated score on a scale from negative to positive Customer- Engagement-Over-Time. The measured customer experience reflects and results from the collection of experiences from every customer.

CEM optimizes the experience of the interactions with the customer in all customer-journey-lifecycles and maximizes the delivered outcome in terms of customer value and business value.

Analyze Customer Experience Journey Interactions

Process Identifier: 1.3.2.3

Hierarchy Level: 3

Brief Description:

This process analyzes Customer Experience journey interactions in a predefined template, the purpose of such analysis is to identify gaps or possible improvements with reference to the required customer experience objectives.

Extended Description:

This process analyzes Customer Experience journey interactions in a predefined Business Offering CE journey template, the purpose of such analysis is to assess qualitative aspects of the customer experience for a specific Business Offering, and identify gaps or possible improvements with reference to the required customer experience objectives and relevant KPIs and metrics benchmarks.

Design Customer Experience Journey

Process Identifier: 1.3.2.1

Hierarchy Level: 3

Brief Description:

This process designs a Customer Experience journey for a specific Business Offering according to the desired outcome, the process defines the set of interactions in the corresponding template for each customer journey.

Extended Description:

This process designs a Customer Experience journey for a specific Business Offering according to the desired outcome, the design uses a predefined Business Offering CE journey template. A customer experience journey encompasses a variety of customer interactions which can be described as a journey path from a starting trigger to an outcome. The process defines the set of interactions in the corresponding template for each customer journey.

Receive Customer Experience Journey Data

Process Identifier: 1.3.2.2

Hierarchy Level: 3

Brief Description:

This process receives data about Customer Experience journey interactions in a predefined template and feeds from data provided by the Customer Experience Collection & Correlation processes in the OR&S vertical.

Extended Description:

This process receives data about Customer Experience journey interactions in a predefined Business Offering CE journey template, in order to record the customer experience for a specific Business Offering, for further analysis. This process feeds from information provided by the Customer Experience Collection & Correlation processes in the OR&S vertical.

Customer Bill Invoice Management

Process Identifier: 1.3.9

Hierarchy Level: 2

Brief Description:

Ensure the bill invoice is created, physically and/or electronically produced and distributed to customers, and that the appropriate taxes, discounts, adjustments, rebates and credits for the products and services delivered to customers have been applied.

Extended Description:

Customer Bill Invoice Management processes ensure the bill invoice is created, physically and/or electronically produced and distributed to customers, and that the appropriate taxes, discounts, adjustments, rebates and credits for the products and services delivered to customers have been applied. These processes are accountable for assuring that enterprise revenue is billed and invoices delivered appropriately to customers.

These processes are responsible for, but not limited to:

- Establishment and application of taxes and charges to the services delivered to customers;
- Application of the adjustment (adjustment decision done in Customer Bill Inquiry Handling);
- Creation of accurate Customer bill invoices including all adjustments, rebates, discounts, credits, etc.
- Production & distribution of Customer bill in physical and/or electronic form to customers in accordance with the billing cycle;

- Forecasting of physical resources associated with Customer bill production, such as paper and envelope quantities;
- Alignment and management of promotional material insertion into distributed Customer bills
- Establishment and management of third party arrangements to support Customer bill invoice generation, production and distribution.

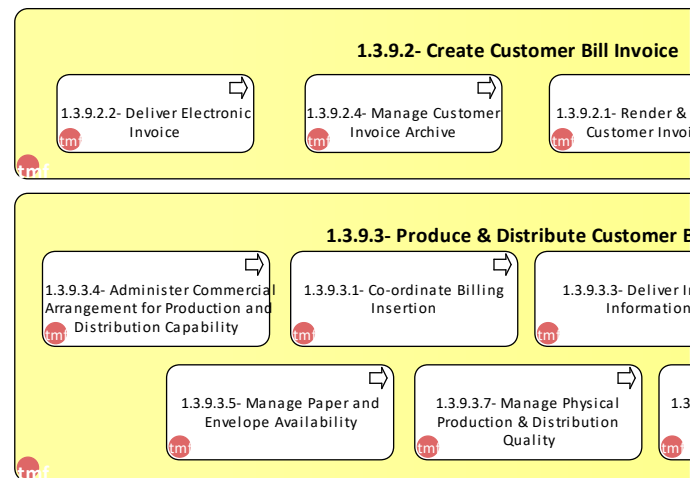

Figure 42: Customer Bill Invoice Management Children

Create Customer Bill Invoice

Process Identifier: 1.3.9.2

Hierarchy Level: 3

Brief Description:

Production of a timely and accurate invoice in accordance with the specific billing cycles and reflective of the final charges for services, together with any adjustments, delivered to the customer by the Service Provider and respective other parties.

Extended Description:

The primary purpose of the Create Customer Bill Invoice process is the production of a timely and accurate invoice in accordance with the specific billing cycles and reflective of the final charges for services, together with any adjustments, delivered to the customer by the Service Provider and respective other parties.

This process contains the invoicing components of the Service Provider's business. This includes the rendering/formatting of an invoice, the delivery of an electronic copy of an invoice to customers and the processes that verify invoice quality prior to distribution to the customer in electronic form, or to the process responsible for physical invoice production and distribution. The flow of this process can be viewed as an extension of the company's e-business strategy. In this case, the Service Provider would render an invoice electronically, via the Internet for example.

Furthermore, this process provides specifications for the formatting of invoices in different ways and to achieve different publishing possibilities, and supports the creation of different invoice formats for different publication media. The process is further responsible for splitting and re-arranging invoices for customers (particularly customers with complex account structures) according to agreements made with these customers.

Additionally these processes store the customer invoice for a period of time to address regulation and/or internal requirements, during which they can be accessed to support any customer or regulator agency inquiries on bill invoices.

Render & Format Customer Invoice

Process Identifier: 1.3.9.2.1

Hierarchy Level: 4

Brief Description:

Render and format the customer bill invoice.

Extended Description:

Not used for this process element.

Deliver Electronic Invoice

Process Identifier: 1.3.9.2.2

Hierarchy Level: 4

Brief Description:

Deliver the electronic copy of an invoice to customers.

Extended Description:

Not used for this process element.

Verify Customer Invoice Quality

Process Identifier: 1.3.9.2.3

Hierarchy Level: 4

Brief Description:

Verify Customer invoice quality before distribution to the customer in electronic form and the process responsible for physical invoice production and distribution.

Extended Description:

Not used for this process element.

Manage Customer Invoice Archive

Process Identifier: 1.3.9.2.4

Hierarchy Level: 4

Brief Description:

Store the customer invoice for a period of time is to address regulation and/or internal requirements, during which they can be accessed to support any customer or regulator agency inquiries on bill invoices.

Extended Description:

Not used for this process element.

Produce & Distribute Customer Bill

Process Identifier: 1.3.9.3

Hierarchy Level: 3

Brief Description:

Physical production and distribution of bills to customers in accordance with the specified billing cycle.

Extended Description:

The purpose of the Produce & Distribute Customer Bill Invoice process is the physical production and distribution of bills to customers in accordance with the specified billing cycle. This process is responsible for all activities associated with ensuring a physical bill is delivered to customers.

The responsibilities of the process include, but are not limited to:

- Establishing and managing the physical bill production cycle;
- Establishing the requirements for, and managing the agreed commercial arrangements with, appropriate outsourced suppliers of the production and distribution capabilities;
- Delivery of invoice information to the physical production processes;
- Coordinating with promotional processes for any billing insertions to be included with the bill;
- If internal processes are used, managing availability of paper and envelope volumes to meet the needs of the physical production process;
- If internal production facilities are used, managing the production runs to create the bills
- Quality management of the physical production and distribution processes.

Note that in the above processes for establishing arrangements with outsourced other parties that the other party Capability Delivery processes are used as the vehicle for creating the commercial agreements.

Co-ordinate Billing Insertion

Process Identifier: 1.3.9.3.1

Hierarchy Level: 4

Brief Description:

Co-ordinate with promotional processes for any billing insertions to be included with the bill.

Extended Description:

Not used for this process element.

Establish & Manage Bill Production Cycle

Process Identifier: 1.3.9.3.2

Hierarchy Level: 4

Brief Description:

Establish and manage the physical bill production cycle.

Extended Description:

Not used for this process element.

Deliver Invoice Information

Process Identifier: 1.3.9.3.3

Hierarchy Level: 4

Brief Description:

Deliver the invoice information to the physical production processes.

Extended Description:

Not used for this process element.

Administer Commercial Arrangement for Production and Distribution Capability

Process Identifier: 1.3.9.3.4

Hierarchy Level: 4

Brief Description:

Establish the requirements for, and manage the agreed commercial arrangements with, appropriate outsourced suppliers of the production and distribution capabilities.

Extended Description:

Not used for this process element.

Manage Paper and Envelope Availability

Process Identifier: 1.3.9.3.5

Hierarchy Level: 4

Brief Description:

Manage availability of paper and envelope volumes to meet the needs of the physical production process, if internal processes are used.

Extended Description:

Not used for this process element.

Manage Production Run to Create Bill

Process Identifier: 1.3.9.3.6

Hierarchy Level: 4

Brief Description:

Manage the production runs to create the bills, if internal production facilities are used.

Extended Description:

Not used for this process element.

Manage Physical Production & Distribution Quality

Process Identifier: 1.3.9.3.7

Hierarchy Level: 4

Brief Description:

Manage quality of the physical production and distribution processes, if internal production facilities are used.

Extended Description:

Not used for this process element.

Pricing, Discounting, Adjustments & Rebates Application

Process Identifier: 1.3.9.4

Hierarchy Level: 3

Brief Description:

Ensure that the bill invoice is reflective of all the commercially agreed billable events and any bill invoice adjustments agreed between a Service Provider and the customer.

Extended Description:

The purpose of the Pricing, Discounting, Adjustments & Rebates Application process is to ensure that the bill invoice is reflective of all the commercially agreed billable events and any bill invoice adjustments agreed between a Service Provider and the customer. In addition, it ensures that the appropriate taxes, rebates (i.e. missed customer commitments) and credits are applied to the customer's bill invoice(s). This process contains the account and customer specific pricing, charges, discounting, credits and taxation for services delivered to the customer by the Service Provider. It accepts events that have been collected, translated, correlated, assembled, guided and service rated. It takes these events and determines the account or customer specific pricing, charges, discounts, and taxation that should be delivered to the invoice(s) for the customer. It reviews any agreed adjustments agreed in the previous billing period and includes these to the bill invoice. This process can occur in real-time as events are service rated, or can be on a scheduled on a periodic basis at the Service Provider's discretion.

Obtain Billing Events

Process Identifier: 1.3.9.4.1

Hierarchy Level: 4

Brief Description:

Accept billing events that have been collected, translated, correlated, assembled, guided and service rated before determining the information would be applied to the customer's bill invoice(s).

Extended Description:

Not used for this process element.

Apply Pricing, Discounting, Adjustments & Rebates to Customer Account

Process Identifier: 1.3.9.4.2

Hierarchy Level: 4

Brief Description:

Determine the customer account or customer specific pricing, charges, discounts, and taxation that should be delivered to the invoice(s) for the customer.

Extended Description:

Not used for this process element.

Apply Agreed Customer Bill Adjustment

Process Identifier: 1.3.9.4.3

Hierarchy Level: 4

Brief Description:

Apply and review any adjustment agreed in the previous billing period and make these included to the bill invoice.

Extended Description:

Not used for this process element.
