However, this document itself may not be modified in any way, including by removing the copyright notice or references to TM FORUM, except as needed for the purpose of developing any document or deliverable produced by a TM FORUM Collaboration Project Team (in which case the rules applicable to copyrights, as set forth in the [TM FORUM IPR Policy](#), must be followed) or as required to translate it into languages other than English.

The limited permissions granted above are perpetual and will not be revoked by TM FORUM or its successors or assigns.

This document and the information contained herein is provided on an “AS IS” basis and TM FORUM DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY WARRANTY THAT THE USE OF THE INFORMATION HEREIN WILL NOT INFRINGE ANY OWNERSHIP RIGHTS OR ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

TM FORUM invites any TM FORUM Member or any other party that believes it has patent claims that would necessarily be infringed by implementations of this TM Forum Standards Final Deliverable, to notify the TM FORUM Team Administrator and provide an indication of its willingness to grant patent licenses to such patent claims in a manner consistent with the IPR Mode of the TM FORUM Collaboration Project Team that produced this deliverable.

The TM FORUM invites any party to contact the TM FORUM Team Administrator if it is aware of a claim of ownership of any patent claims that would necessarily be infringed by implementations of this TM FORUM Standards Final Deliverable by a patent holder that is not willing to provide a license to such patent claims in a manner consistent with the IPR Mode of the TM FORUM Collaboration Project Team that produced this TM FORUM Standards Final Deliverable. TM FORUM may include such claims on its website but disclaims any obligation to do so.

TM FORUM takes no position regarding the validity or scope of any intellectual property or other rights that might be claimed to pertain to the implementation or use of the technology described in this TM FORUM Standards Final Deliverable or the extent to which any license under such rights might or might not be available; neither does it represent that it has made any effort to identify any such rights. Information on TM FORUM's procedures with respect to rights in any document or deliverable produced by a TM FORUM Collaboration Project Team can be found on the TM FORUM website. Copies of claims of rights made available for publication and any assurances of licenses to be made available, or the result of an attempt made to obtain a general license or permission for the use of such proprietary rights by implementers or users of this TM FORUM Standards Final Deliverable, can be obtained from the TM FORUM Team Administrator. TM FORUM makes no representation that any information or list of intellectual property rights will at any time be complete, or that any claims in such list are, in fact, Essential Claims.

General Information

This document contains the text of the Business Process Framework for context and more information please refer to “GB991 Core Frameworks Concepts and Principles” guidebook.

Preface

eTOM Business Process Framework

The eTOM or Business Process Framework is a reference framework for categorizing all the business activities used by an enterprise involved in delivering on-line Information, Communications and Entertainment services. This is done through definition of each area of business activity, in the form of process components or Process Elements that can be decomposed to expose progressive detail. These process elements can then be positioned within a model to show organizational, functional and other relationships, and can be combined within process flows that trace activity paths through the business.

The eTOM framework can serve as the blueprint for standardizing and categorizing business activities (or process elements) that will help set direction and the starting point for development and integration of Business and Operations Support Systems (BSS and OSS respectively). An important additional application for the eTOM framework is that it helps to support and guide work by TM Forum members and others to develop their solutions. It provides an industry-standard reference point, when considering internal process reengineering needs, partnerships, alliances, and general working agreements with other enterprises, and for suppliers into such enterprises, the eTOM framework outlines potential boundaries of process solutions, and the required functions, inputs, and outputs that must be supported by process solutions.

Introduction

This document contains the main text of eTOM for this domain. It is comprised of decompositions and descriptions of the process elements that make out this domain.

The focus of the Business Process Framework is on the business processes used by service providers, the linkages between these processes, and the use of Market, Product, Customer, Service, Resource, Business Partner, and Enterprise Management related information by multiple processes.

The decomposition starts with a top level process which is a Core Process that details the activity that takes place and describes all subsequent activities that occurs. Thereby this Core Process includes all of the information regarding the activity. Lower level processes also known as Task Processes are then describing a unique path of action and further detail the specific process. This is then repeated to lower level of granularly of up to seven levees.

At the start of each Level 2 process a diagram details all of its sub processes is placed. This diagram showers Level 3 process and the level 4 process below them in boxes where the same level boxes are side by side and the their child processes in side each box. Process that have further decomposition include another box in box diagram of level 5, 6 and 7 process if existing.

Process Associations and IDs

To aid understanding and navigation, each process described here has an associated indication.

Processes have been given a process ID throughout this document. The format of the numbering scheme work as follows:

.b.x.c.d.e where

- b: This digit is used to identify the originator of the process It is set to 1 if the process is the TMF original one, to 2 otherwise so if a company chooses to extended the Business Process Framework it can do so keeping the original numbering and extend as needed.
- x: Digit representing Domain
- c: Digit representing Level 2 process
- d: Digit representing Level 3 process
- e: Digit representing Level 4 process

The unique identifier thus associated with individual processes can thus be used to assist in locating individual processes.

Typographic Conventions

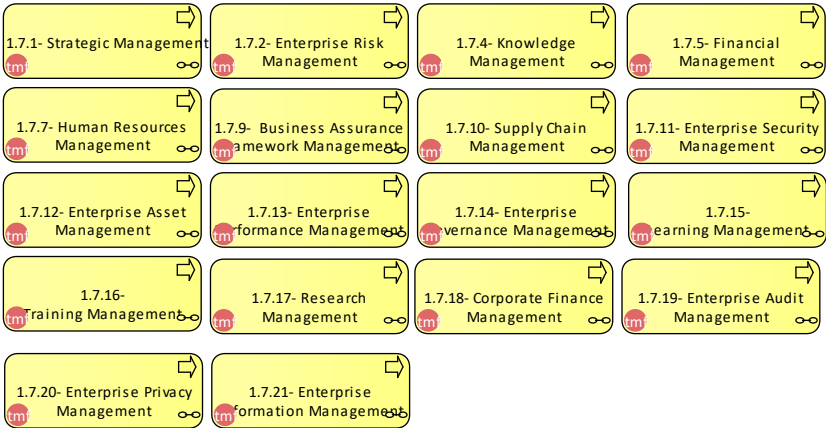

- A Business Process is represented by a *decorator* in form of an arrow located to the top right. A red dot decorator with the initial TMF indicates that this is a TM Forum Business Process. The color yellow background hints to the business layer.

Glossary

Name	Description
ABE	Aggregate Business Entity
BE	Business Entity
eTOM	enhanced Telecom Operation Map (TMF Framework)
ODA	Open Digital Architecture
SID	Shared Information Data model (TMF Framework) is the previous name of Information Framework
TAM	Telecom Applications Map (TMF Framework) is the previous name of Application Framework

Enterprise Domain

Enterprise Domain Main Diagram

Strategic Management

Process Identifier: 1.7.1

Hierarchy Level: 2

Brief Description:

Strategic Management business process directs and controls the development of strategy and plans of the organization as a whole.

Extended Description:

Strategic Management business process directs and controls the development of strategy and plans of the organization as a whole.

Strategic Management includes business activities that develop Strategic plans of the organization's focus, including which markets the enterprise will address, what financial requirements must be met, what acquisitions may enhance the enterprise's financial or market position, etc., and enterprise planning to coordinate the overall plan for the organization in tandem with operating business units.

This is the business processes that drives the mission and vision of the organization as a whole, with oversight on the enterprise architecture management, corporate investment strategies, and organizational capacity management.

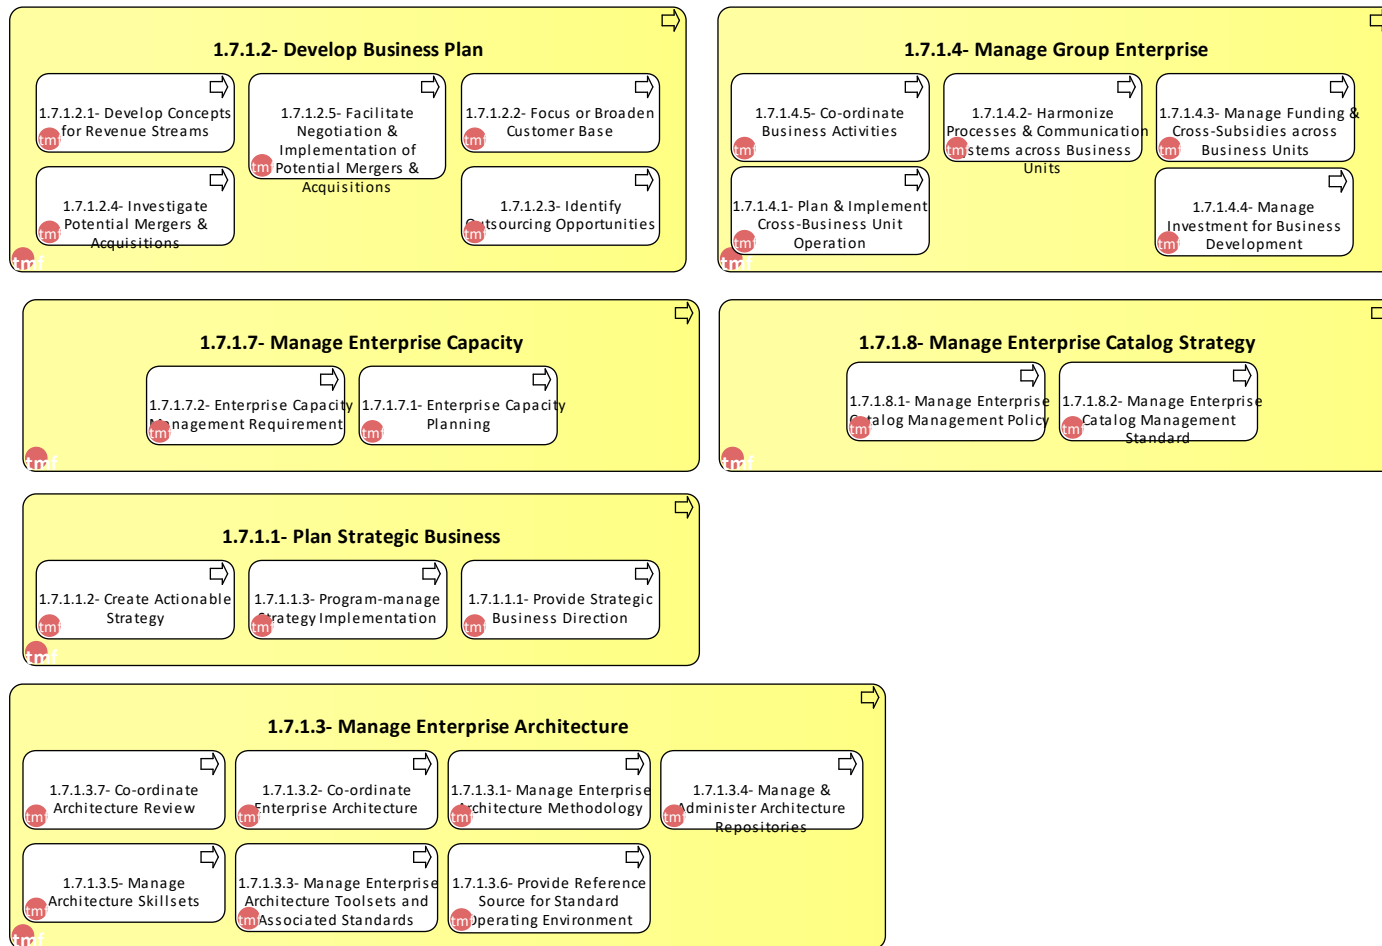

Figure 1: Strategic Management Children

Plan Strategic Business

Process Identifier: 1.7.1.1

Hierarchy Level: 3

Brief Description:

Plan Strategic Business activity define and develop the organization's direction - the Corporate strategy, including the vision and direction.

Extended Description:

Plan Strategic Business activity define and develop the organization's direction - the Corporate strategy, including the vision and direction.

Plan Strategic Business activity understands the organization and its core business, continuously analyzes strengths, weaknesses and threats, defines the vision, objectives and goals of the organization as a whole, and effectively institutionalizes corporate strategic plans into action (which includes monitoring underlying business plans for alignment and contribution to the success of the organization).

Provide Strategic Business Direction

Process Identifier: 1.7.1.1.1

Hierarchy Level: 4

Brief Description:

Provide strategic business direction to the enterprise

Extended Description:

Not used for this process element.

Create Actionable Strategy

Process Identifier: 1.7.1.1.2

Hierarchy Level: 4

Brief Description:

Create actionable plans based on the business strategy

Extended Description:

Not used for this process element.

Program-manage Strategy Implementation

Process Identifier: 1.7.1.1.3

Hierarchy Level: 4

Brief Description:

Provide high-level program management of strategic business plan implementation.

Extended Description:

Not used for this process element.

Develop Business Plan

Process Identifier: 1.7.1.2

Hierarchy Level: 3

Brief Description:

Develop Business activity conceives and defines the ideas, initiatives, and activities that improve and/or grow the organization's business.

Extended Description:

Develop Business activity conceives and defines the ideas, initiatives, and activities that improve and/or grow the organization's business.

Develop Business activity include activities and solutions to increase revenue, diversify, improve profitability and making strategic business decisions. This activity identifies the best market segments to invest in, identifies strategic partnerships and establishes the review and cost implications to develop businesses

Develop Concepts for Revenue Streams

Process Identifier: 1.7.1.2.1

Hierarchy Level: 4

Brief Description:

Develop concepts for new and diversified revenue streams to support enterprise growth and focus.

Extended Description:

Develop concepts for new revenue streams, and diversification of revenue streams. The focus is on broadening the scope of the enterprise activities through expansion, or sharpening the enterprise focus through divestment or outsourcing of non-critical activities. The Marketing & Offer Management processes are responsible for the development of markets and products within the existing scope of the enterprise. Business Development processes understand what processes are critical to the identity of the enterprise as priority processes and look for higher quality and lower cost solutions for these high priority processes. Business Development processes are closely related to Strategic Planning.

Focus or Broaden Customer Base

Process Identifier: 1.7.1.2.2

Hierarchy Level: 4

Brief Description:

Explore opportunities to focus or broaden the customer base through new markets, products, and services.

Extended Description:

Focus or broaden the customer base via investigating new markets, as well as different products and services for the enterprise. The focus is on broadening the scope of the enterprise activities through expansion, or sharpening the enterprise focus through divestment or outsourcing of non-critical activities. The Marketing & Offer Management processes are responsible for the development of markets and products within the existing scope of the enterprise. Business Development processes understand what processes are critical to the identity of the enterprise as priority processes and look for higher quality and lower cost solutions for these high priority processes. Business Development processes are closely related to Strategic Planning.

Identify Outsourcing Opportunities

Process Identifier: 1.7.1.2.3

Hierarchy Level: 4

Brief Description:

Identify opportunities to outsource non-priority or non-competitive functions and processes.

Extended Description:

Identify the opportunity for a surgical outsourcing of a function or process that is not a priority of the enterprise, or is a process the enterprise cannot deliver at competitive benchmarks. The focus is on broadening the scope of the enterprise activities through expansion, or sharpening the enterprise focus through divestment or outsourcing of non-critical activities. The Marketing & Offer Management processes are responsible for the development of markets and products within the existing scope of the enterprise. Business Development processes understand what processes are critical to the identity of the enterprise as priority processes and look for higher quality and lower cost solutions for these high priority processes. Business Development processes are closely related to Strategic Planning.

Investigate Potential Mergers & Acquisitions

Process Identifier: 1.7.1.2.4

Hierarchy Level: 4

Brief Description:

Investigate merger and acquisition options to support enterprise strategy execution.

Extended Description:

Manage investigation of potential merger and acquisition options to realize certain enterprise strategies The focus is on broadening the scope of the enterprise activities through expansion, or sharpening the enterprise focus through divestment or outsourcing of non-critical activities. The Marketing & Offer Management processes are responsible for the development of markets and products within the existing scope of the enterprise. Business Development processes understand what processes are critical to the identity of the enterprise as priority processes and look for higher quality and lower cost solutions for these high priority processes. Business Development processes are closely related to Strategic Planning.

Facilitate Negotiation & Implementation of Potential Mergers & Acquisitions

Process Identifier: 1.7.1.2.5

Hierarchy Level: 4

Brief Description:

Facilitate negotiation and implementation of mergers or acquisitions.

Extended Description:

Not used for this process element.

Manage Enterprise Architecture

Process Identifier: 1.7.1.3

Hierarchy Level: 3

Brief Description:

Manage Enterprise Architecture business activity direct and control processes to define, develop, manage and maintain the blueprint of the structure and operations of the organization.

Extended Description:

Manage Enterprise Architecture business activity direct and control processes to define, develop, manage and maintain the blueprint of the structure and operations of the organization.

Manage Enterprise Architecture establishes the model to describe the organization in entirety based on adjoining blueprints from business to technology and operations. This activity applies enterprise architecture methodology, a framework to identify reference models for the operations of the organization, their relationships to each other, and the architecture management needed to drive a details, and manage and administer the capture processes.

In addition enterprise architecture management processes define the skill sets require for architects, develop training programs and manage any certification process for architects across the enterprise.

Enterprise Architecture Management provides the reference source for the enterprise Standard Operating Environment that is the collection of applications, hardware, software and network components that have been standardized for use across the enterprise.

Lastly, enterprise architecture management provides a point of review for strategy and tactical/solution architecture, and defines and manages the review processes.

The business strategies and plans provide a key starting point for the development and direction provide by the Enterprise Architecture Management.

Note that enterprise architecture management covers both IT and network technologies.

The Enterprise Architecture Management processes impact other areas within the eTOM model, such as Knowledge Management and Process Architecture Management.

Manage Enterprise Architecture Methodology

Process Identifier: 1.7.1.3.1

Hierarchy Level: 4

Brief Description:

Define, develop, deploy, and maintain the enterprise architecture methodology, framework, and supporting guidance.

Extended Description:

Define/select, develop and deploy the enterprise architecture methodology, which is a framework that identifies the reference models, their relationships to each other, and the architecture management processes used to establish and maintain the enterprise architecture. The framework contains the policies, guidelines, documentation templates and approaches to be used throughout the enterprise. Enterprise Architecture Management processes define, develop, manage and maintain the enterprise architecture, which is the model describing the enterprise in all its facets.

Co-ordinate Enterprise Architecture

Process Identifier: 1.7.1.3.2

Hierarchy Level: 4

Brief Description:

Details the processes used to capture, modify, communicate, and review the enterprise architecture and manage exceptions to it.

Extended Description:

Not used for this process element.

Manage Enterprise Architecture Toolsets and Associated Standards

Process Identifier: 1.7.1.3.3

Hierarchy Level: 4

Brief Description:

Define and select the toolsets used to capture the enterprise architecture (e.g. UML tools), and develop any required standards or reference framework to be used with the tools.

Extended Description:

Not used for this process element.

Manage & Administer Architecture Repositories

Process Identifier: 1.7.1.3.4

Hierarchy Level: 4

Brief Description:

define, develop and maintain the repositories and associated repository meta-models to be used to capture architecture details, and manage and administer the capture processes.

Extended Description:

Not used for this process element.

Manage Architecture Skillsets

Process Identifier: 1.7.1.3.5

Hierarchy Level: 4

Brief Description:

Define the skill sets require for architects, develop training programs and manage any certification process for architects across the enterprise.

Extended Description:

Not used for this process element.

Provide Reference Source for Standard Operating Environment

Process Identifier: 1.7.1.3.6

Hierarchy Level: 4

Brief Description:

Provide the reference source for the enterprise standard operating environment and approved technology components.

Extended Description:

Provides the reference source for the enterprise Standard Operating Environment that is the collection of applications, hardware, software and network components that have been standardized for use across the enterprise. The business strategies and plans provide a key starting point for the development and direction provided. Note that enterprise architecture management covers both IT and network technologies, and the processes impact other areas within the eTOM model, such as Knowledge Management and Process Architecture Management.

Co-ordinate Architecture Review

Process Identifier: 1.7.1.3.7

Hierarchy Level: 4

Brief Description:

Provides a point of review for strategy and tactical/solution architecture, and defines and manages the review processes.

Extended Description:

Not used for this process element.

Manage Group Enterprise

Process Identifier: 1.7.1.4

Hierarchy Level: 3

Brief Description:

Manage Group Enterprise business activity plans, directs and coordinates strategy and enterprise planning across the organizations business units, as well as between the enterprise and its subsidiaries.

Extended Description:

Manage Group Enterprise business activity plans, directs and coordinates strategy and enterprise planning across the organizations business units, as well as between the enterprise and its subsidiaries.

Manage Group Enterprise business activity includes planning and implementation of cross-business unit operations, harmonization of processes and communication systems; funding and cross-subsidies, investment for business development planning, execution and management of existing and new business activities.

Plan & Implement Cross-Business Unit Operation

Process Identifier: 1.7.1.4.1

Hierarchy Level: 4

Brief Description:

Plan and implement coordination of operations across business units and subsidiaries.

Extended Description:

Planning and implementation of cross-business unit operation. These processes are responsible for planning and management of coordination across business units within the enterprise, and between the enterprise and its subsidiaries (note that similar interactions concerning outsourcing involving other parties is handled elsewhere, through processes located in the Engaged Party Domain). The focus is on processes concerned with the co-ordination within the enterprise's own organization, including subsidiaries, from an Enterprise-wide point of view.

Harmonize Processes & Communication Systems across Business Units

Process Identifier: 1.7.1.4.2

Hierarchy Level: 4

Brief Description:

Harmonization of processes and communication systems;

Extended Description:

Not used for this process element.

Manage Funding & Cross-Subsidies across Business Units

Process Identifier: 1.7.1.4.3

Hierarchy Level: 4

Brief Description:

Funding and cross-subsidies

Extended Description:

Not used for this process element.

Manage Investment for Business Development

Process Identifier: 1.7.1.4.4

Hierarchy Level: 4

Brief Description:

Investment for business development

Extended Description:

Not used for this process element.

Co-ordinate Business Activities

Process Identifier: 1.7.1.4.5

Hierarchy Level: 4

Brief Description:

Planning, execution and management of existing and new business activities.

Extended Description:

Not used for this process element.

Manage Enterprise Capacity

Process Identifier: 1.7.1.7

Hierarchy Level: 3

Brief Description:

Manage Enterprise Capacity business activity establishes current and future enterprise ""resources"" (i.e. materials, staff, stock, supplies etc.) and assures they are sufficient to meet planned and forecasted business needs.

Extended Description:

Manage Enterprise Capacity business process establishes current and future enterprise "resources" (i.e. materials, staff, stock, supplies etc.) are sufficient to meet planned and forecasted business needs.

Enterprise Capacity Management business process support the organization in determining optimal availability for current and future business intents for use or consumption, and aligns the allocation of available and planned "resources" relationship between all value streams, such product management, service management and production resource management. Through this business process, maximum levels of output that an organization can sustain for production (to make a product or provide a service) are defined and managed in a continuum.

Enterprise Capacity Management process works closely with service level management to ensure that the business' requirements for capacity are meet expectations of the enterprises performance goals. Enterprise Capacity Management also serves as a focal point for any capacity issues in the organization as it supports product, services and resources planning, availability and performance.

Examples of Enterprise Capacity Management include:

A telco that can support 200 million minutes of use across a 200 solar powered base stations with a 40 man network operations team and 1000 subscribers in a week.

A café that can brew 1800 cups of coffee in a working day of 8 hours.

A call center scoped to field 7,000 calls per week with 120 agents in a 3 shift cycle.

An automobile production line that can assemble 250 trucks per month across 3 truck models.

A restaurant that is designed to support seating capacity that accommodates a maximum of 100 diners at its peak time per week.

Enterprise Capacity Planning

Process Identifier: 1.7.1.7.1

Hierarchy Level: 4

Brief Description:

Enterprise Capacity Planning business process activity handle the tasks of balancing available "resources" against value streams need in order to meet the enterprises' demand management program.

Extended Description:

Enterprise Capacity Planning business process activity handle the tasks of balancing available "resources" against value streams need in order to meet the enterprises' demand management program.

Enterprise Capacity Planning maintains a holistic view across the enterprise to ensure a match of supply with demand given all the resources available to the enterprise. It receives reports from all value streams (product/service and resource), and supports the overarching capacity management policies.

Enterprise Capacity Planning impacts on all the enterprise, it's projects, and measures and tracks the allocation and use of capacity based on well defined capacity management strategy.

Enterprise Capacity Management Requirement

Process Identifier: 1.7.1.7.2

Hierarchy Level: 4

Brief Description:

Enterprise Capacity Management Requirement business activity help to identify and deal with the Enterprises demand program to support any and all of the value streams, including products, service and resources altogether.

Extended Description:

Enterprise Capacity Management Requirement business activity help to identify and deal with the Enterprises demand program to support any and all of the value streams, including products, service and resources altogether.

Manage Enterprise Catalog Strategy

Process Identifier: 1.7.1.8

Hierarchy Level: 3

Brief Description:

Manage Enterprise Catalog Strategy business activity directs and controls the definition of the overarching Catalog Management strategy for the organization.

Extended Description:

Manage Enterprise Catalog Strategy business activity directs and controls the definition of the overarching Catalog Management strategy for the organization.

Manage Enterprise Catalog Strategy business activity include activities to oversee all Catalog Management in the organization and with its subsidiaries, Catalog Management Integration and Catalog Management implementation between and across functions and operating subsidiaries.

Manage Enterprise Catalog Management Policy

Process Identifier: 1.7.1.8.1

Hierarchy Level: 4

Brief Description:

Manage the policies that govern catalog management across enterprise catalogs.

Extended Description:

Manage Enterprise Catalog Management Policy activity set the policies for catalog management across the enterprises catalogs.

Manage Enterprise Catalog Management Standard

Process Identifier: 1.7.1.8.2

Hierarchy Level: 4

Brief Description:

Manage Enterprise Catalog Management Standard activity identify and promulgate rules and references for managing conformity of Catalogs for information integrity across the enterprises catalogs.

Extended Description:

Manage Enterprise Catalog Management Standard activity identify and promulgate rules and references for managing conformity of Catalogs for information integrity across the enterprises catalogs.

Enterprise Risk Management

Process Identifier: 1.7.2

Hierarchy Level: 2

Brief Description:

Enterprise Risk Management business activity directs and controls the understanding, analyzing and addressing of situations that are probable, or expose the enterprise to all threats.

Enterprise Risk Management includes activities that implement mediator

Extended Description:

Enterprise Risk Management establishes and maintains an integrated, organization-wide framework for managing risk. It defines governance structures and culture, ensures the identification and assessment of internal and external risks, supports the development and execution of risk responses, and enables ongoing monitoring, review, and transparent communication. The objective is to align risk oversight with strategic goals and enhance organizational performance and resilience.

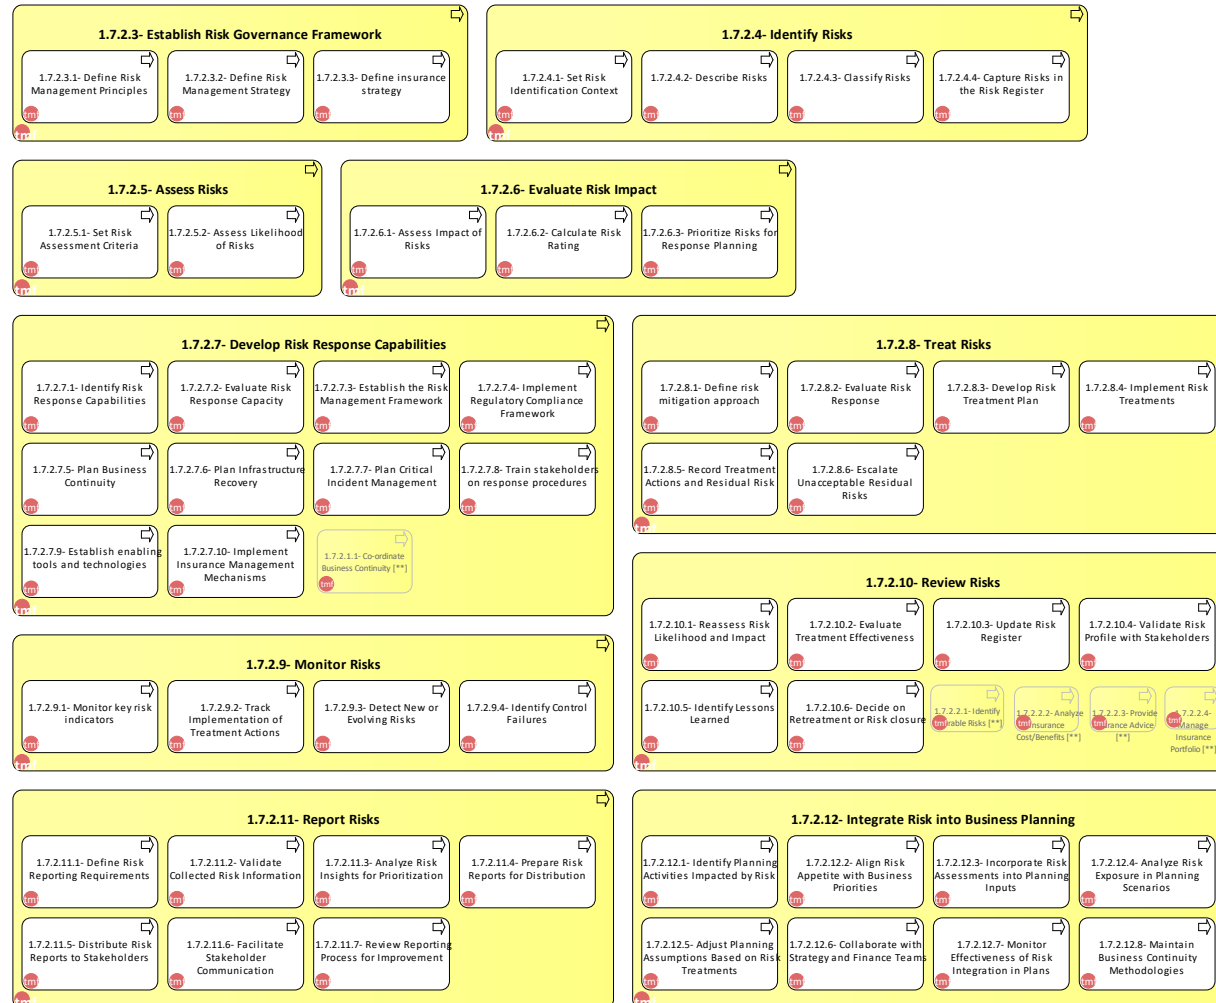

Figure 2: Enterprise Risk Management Children

Establish Risk Governance Framework

Process Identifier: 1.7.2.3

Hierarchy Level: 3

Brief Description:

Establish Enterprise Risk Governance defines the strategic structure, principles, and mechanisms by which the organization oversees and manages risk

Extended Description:

Establish Enterprise Risk Governance defines the strategic structure, principles, and mechanisms by which the organization oversees and manages risk. It ensures alignment with business goals and regulatory requirements by setting risk appetite and tolerance boundaries, assigning roles and responsibilities, and establishing supporting frameworks such as compliance and insurance strategies. The goal is to enable consistent, proactive, and accountable risk oversight.

Define Risk Management Principles

Process Identifier: 1.7.2.3.1

Hierarchy Level: 4

Brief Description:

Define the enterprise principles, appetite, and tolerance that guide risk management.

Extended Description:

Establish the foundational principles that guide risk management across the enterprise, ensuring consistency, accountability, and alignment with organizational values and strategic objectives. These principles include defining the enterprise's risk appetite and tolerance, as well as guidelines for transparency, proportionality, and responsibility in risk-taking and decision-making.

Define Risk Management Strategy

Process Identifier: 1.7.2.3.2

Hierarchy Level: 4

Brief Description:

Define the enterprise risk management strategy, governance, roles, and oversight approach.

Extended Description:

Develop the overarching objectives and governance approach that apply the organization's risk management principles in practice. This includes defining roles and responsibilities, oversight structures, and alignment with enterprise strategy to enable consistent, proactive, and risk-informed decision-making. Establish enterprise-wide strategy, governance structures, roles, and escalation procedures for business continuity. Ensure accountability for continuity and recovery, and maintain oversight of planning, testing, and recovery activities.

Define insurance strategy

Process Identifier: 1.7.2.3.3

Hierarchy Level: 4

Brief Description:

Define the insurance strategy used to transfer financial exposure across relevant risk domains.

Extended Description:

Define Insurance Strategy establishes an organization-wide approach for transferring risk through insurance coverage. This process defines the scope, objectives, and governance of insurance arrangements to mitigate financial exposure across strategic, operational, legal, and environmental domains. It ensures alignment with regulatory obligations, risk assessments, and business continuity resilience objectives.

Identify Risks

Process Identifier: 1.7.2.4

Hierarchy Level: 3

Brief Description:

Identify Risks is the process of systematically discovering, describing, and documenting internal and external sources of uncertainty that could affect the achievement of organizational objectives

Extended Description:

Identify Risks is the process of systematically discovering, describing, and documenting internal and external sources of uncertainty that could affect the achievement of organizational objectives. It establishes the context for risk identification, gathers input from relevant stakeholders, and applies consistent criteria to articulate and categorize risks across strategic, operational, financial, legal, and environmental domains. This process produces a structured, traceable risk inventory captured in a risk register, forming the foundation for risk assessment, treatment planning, and continuous monitoring.

Set Risk Identification Context

Process Identifier: 1.7.2.4.1

Hierarchy Level: 4

Brief Description:

Define the objectives, scope, and boundaries for identifying risks.

Extended Description:

Define the objectives, scope, and boundaries for risk identification. Understand the internal and external environments that influence risk exposure.

Describe Risks

Process Identifier: 1.7.2.4.2

Hierarchy Level: 4

Brief Description:

Describe each risk consistently in terms of event, root causes, and potential impact.

Extended Description:

Clearly articulate each risk using a consistent structure that includes the event, its root cause(s), and potential impact.

Classify Risks

Process Identifier: 1.7.2.4.3

Hierarchy Level: 4

Brief Description:

Classify risks by type, business domain, affected processes, and mitigation approach.

Extended Description:

Categorize risks by type (e.g., strategic, operational), business domain, affected processes, and their potential for mitigation through transfer or control strategies.

Capture Risks in the Risk Register

Process Identifier: 1.7.2.4.4

Hierarchy Level: 4

Brief Description:

Capture identified risks and related metadata in the risk register for ongoing management.

Extended Description:

Record each risk with associated metadata in a structured repos Define the objectives, scope, and boundaries for risk identification. Understand the internal and external environments that influence risk exposure to enable prioritization, treatment planning, and monitoring.

Assess Risks

Process Identifier: 1.7.2.5

Hierarchy Level: 3

Brief Description:

Defines and applies criteria for evaluating the likelihood of identified risks. It focuses on estimating the probability of risk events using historical data, expert judgment, and predictive models

Extended Description:

Defines and applies criteria for evaluating the likelihood of identified risks. It focuses on estimating the probability of risk events using historical data, expert judgment, and predictive models. This prepares the foundation for impact evaluation, risk scoring, and prioritization in subsequent processes. Identify Risk business process element systematically recognizes internal and external risks that may affect organizational objectives. It builds a comprehensive risk inventory to inform assessment and response, enabling proactive mitigation.

Set Risk Assessment Criteria

Process Identifier: 1.7.2.5.1

Hierarchy Level: 4

Brief Description:

Define the scales and criteria used to assess risk likelihood, impact, and thresholds.

Extended Description:

Establish scales and parameters for evaluating likelihood and impact. Align assessment criteria with strategic, operational, financial, and compliance objectives. Ensure consistency with the organization's risk appetite, tolerance, and thresholds.

Assess Likelihood of Risks

Process Identifier: 1.7.2.5.2

Hierarchy Level: 4

Brief Description:

Assess the likelihood of identified risks using relevant data, judgment, and models.

Extended Description:

Estimate the probability of each identified risk occurring using historical data, expert judgment, and predictive models. Account for relevant time horizons and triggering conditions.

Evaluate Risk Impact

Process Identifier: 1.7.2.6

Hierarchy Level: 3

Brief Description:

Evaluate Risk Impact assesses the potential consequences of identified risks on the organization's strategic objectives, operations, assets, stakeholders, and performance

Extended Description:

Evaluate Risk Impact assesses the potential consequences of identified risks on the organization's strategic objectives, operations, assets, stakeholders, and performance. This process applies qualitative and quantitative methods—such as expert judgment, simulations, and scenario analysis—to determine the severity of risk outcomes. It considers both direct and cascading impacts, including financial, operational, reputational, and compliance-related consequences. The output informs the calculation of composite risk ratings and supports the prioritization of risks for treatment planning, escalation, or monitoring.

Assess Impact of Risks

Process Identifier: 1.7.2.6.1

Hierarchy Level: 4

Brief Description:

Assess the direct and indirect impacts of identified risks on enterprise objectives.

Extended Description:

Analyze the potential consequences of each risk on key objectives such as revenue, operations, reputation, and compliance. Include both direct and indirect impacts, considering dependencies and cascading effects.

Calculate Risk Rating

Process Identifier: 1.7.2.6.2

Hierarchy Level: 4

Brief Description:

Calculate composite risk ratings by combining likelihood and impact assessments.

Extended Description:

Integrate likelihood and impact assessments to assign a composite risk score or rating (e.g., using a risk matrix). Support comparative analysis across risks to inform prioritization.

Prioritize Risks for Response Planning

Process Identifier: 1.7.2.6.3

Hierarchy Level: 4

Brief Description:

Prioritize risks for response planning based on severity, urgency, and strategic importance.

Extended Description:

Rank risks based on severity, urgency, and strategic importance. Identify high-priority risks for treatment or monitoring in the risk response phase.

Develop Risk Response Capabilities

Process Identifier: 1.7.2.7

Hierarchy Level: 3

Brief Description:

Develop Risk Response Capabilities establishes and strengthens the organizational structures, competencies, systems, and frameworks required to respond effectively to identified risks

Extended Description:

Develop Risk Response Capabilities establishes and strengthens the organizational structures, competencies, systems, and frameworks required to respond effectively to identified risks. This process ensures readiness by defining appropriate control mechanisms, building capacity for risk treatment and continuity, and embedding regulatory compliance, business continuity, infrastructure recovery, and critical incident response procedures. It also includes the deployment of enabling technologies, stakeholder training, and insurance mechanisms to ensure that risk responses are coordinated, reliable, and aligned with enterprise resilience objectives.

Identify Risk Response Capabilities

Process Identifier: 1.7.2.7.1

Hierarchy Level: 4

Brief Description:

Identify the controls and organizational capabilities required to respond to risks.

Extended Description:

Determine the control mechanisms and organizational competencies required to address identified risks.

Evaluate Risk Response Capacity

Process Identifier: 1.7.2.7.2

Hierarchy Level: 4

Brief Description:

Evaluate whether current resources and competencies are sufficient to support effective risk response.

Extended Description:

Assess existing resources and competencies to identify gaps in the organization's ability to respond effectively.

Establish the Risk Management Framework

Process Identifier: 1.7.2.7.3

Hierarchy Level: 4

Brief Description:

Establish the framework of principles, roles, processes, and tools for enterprise risk management.

Extended Description:

Define principles, roles, processes, and tools for consistent risk identification, assessment, and response.

Implement Regulatory Compliance Framework

Process Identifier: 1.7.2.7.4

Hierarchy Level: 4

Brief Description:

Implement the regulatory compliance framework through operational controls, monitoring, and escalation.

Extended Description:

Translate compliance requirements into operational controls, monitoring mechanisms, and escalation paths.

Plan Business Continuity

Process Identifier: 1.7.2.7.5

Hierarchy Level: 4

Brief Description:

Plan and test business continuity procedures for sustained interruptions to critical functions.

Extended Description:

Proactively design, document, and test business and operational procedures to ensure continuity of critical functions during sustained interruptions.

Plan Infrastructure Recovery

Process Identifier: 1.7.2.7.6

Hierarchy Level: 4

Brief Description:

Plan and test recovery procedures for key infrastructure capabilities and services.

Extended Description:

Define, document, and test recovery and backup procedures for key infrastructure capabilities to enable controlled restoration of services and systems.

Plan Critical Incident Management

Process Identifier: 1.7.2.7.7

Hierarchy Level: 4

Brief Description:

Plan roles, responsibilities, and escalation criteria for managing critical operational disruptions.

Extended Description:

Define operational roles, responsibilities, and escalation criteria for responding to critical operational disruptions. Establish proactive procedures for managing abnormal circumstances that may not meet formal crisis thresholds.

Train stakeholders on response procedures

Process Identifier: 1.7.2.7.8

Hierarchy Level: 4

Brief Description:

Train stakeholders on response procedures to support effective execution of risk response plans.

Extended Description:

Build awareness and skills among stakeholders to ensure effective execution of risk response plans.

Establish enabling tools and technologies

Process Identifier: 1.7.2.7.9

Hierarchy Level: 4

Brief Description:

Establish the tools and technologies needed for risk monitoring, response coordination, and reporting.

Extended Description:

Deploy systems and technologies that support risk monitoring, response coordination, and reporting.

Implement Insurance Management Mechanisms

Process Identifier: 1.7.2.7.10

Hierarchy Level: 4

Brief Description:

Implement insurance management mechanisms, including policy selection, renewals, claims, and monitoring.

Extended Description:

Implement Insurance Management Mechanisms includes selecting and procuring appropriate insurance policies, negotiating terms and coverage, ensuring premiums, renewals, and claims are managed effectively. It establishes monitoring and reporting mechanisms to verify coverage adequacy, compliance with regulatory obligations, and alignment with evolving risk exposures and business continuity objectives.

Treat Risks

Process Identifier: 1.7.2.8

Hierarchy Level: 3

Brief Description:

Treat Risks is the process of determining and implementing appropriate actions to modify risk exposure in alignment with the organization's risk appetite, strategic objectives, and operational context

Extended Description:

Treat Risks is the process of determining and implementing appropriate actions to modify risk exposure in alignment with the organization's risk appetite, strategic objectives, and operational context. It involves selecting mitigation strategies, developing treatment plans, executing risk responses, and ensuring that residual risks are recorded and managed appropriately. This process supports informed decision-making, accountability, and improved resilience across the enterprise.

Define risk mitigation approach

Process Identifier: 1.7.2.8.1

Hierarchy Level: 4

Brief Description:

Define the mitigation approach for prioritized risks, including the selected response type and rationale.

Extended Description:

Define Risk Mitigation Approach involves identifying and evaluating appropriate strategies to reduce the likelihood or impact of prioritized risks. This includes selecting from response types such as avoidance, reduction, transfer, or acceptance, and documenting the rationale and expected outcomes to support treatment planning.

Evaluate Risk Response

Process Identifier: 1.7.2.8.2

Hierarchy Level: 4

Brief Description:

Evaluate selected risk responses for effectiveness, feasibility, and alignment with risk appetite.

Extended Description:

Assess selected risk responses based on criteria such as effectiveness, feasibility, cost-benefit, alignment with risk appetite, and residual risk. This step validates the selected strategy before formalizing the treatment plan.

Develop Risk Treatment Plan

Process Identifier: 1.7.2.8.3

Hierarchy Level: 4

Brief Description:

Develop the actionable plan for implementing selected risk treatments.

Extended Description:

Translate selected mitigation approaches into actionable plans with responsibilities, resources, timelines, and success criteria.

Implement Risk Treatments

Process Identifier: 1.7.2.8.4

Hierarchy Level: 4

Brief Description:

Implement risk treatment actions across the relevant business and technical areas.

Extended Description:

Execute treatment actions across relevant business or technical units, coordinating resources and change management.

Record Treatment Actions and Residual Risk

Process Identifier: 1.7.2.8.5

Hierarchy Level: 4

Brief Description:

Record completed treatment actions and resulting residual risk in the risk register.

Extended Description:

?Update the risk register with actions taken and estimated residual risk levels. Ensure traceability and future monitoring readiness.

Escalate Unacceptable Residual Risks

Process Identifier: 1.7.2.8.6

Hierarchy Level: 4

Brief Description:

Escalate residual risks that remain above tolerance thresholds for further decision-making.

Extended Description:

Elevate risks that remain above tolerance thresholds after treatment to senior governance for alternative decisions or reassessment.

Monitor Risks

Process Identifier: 1.7.2.9

Hierarchy Level: 3

Brief Description:

Monitor Risks is the continuous process of tracking key risk indicators, treatment progress, and emerging threats to detect changes in the organization's risk profile

Extended Description:

Monitor Risks is the continuous process of tracking key risk indicators, treatment progress, and emerging threats to detect changes in the organization's risk profile. It ensures that risk exposure remains within acceptable boundaries by assessing control effectiveness, identifying new or evolving risks, and verifying the implementation of mitigation actions. The goal is to provide timely insights that support proactive decision-making, escalation when necessary, and alignment with strategic objectives and defined risk appetite.

Monitor key risk indicators

Process Identifier: 1.7.2.9.1

Hierarchy Level: 4

Brief Description:

Monitor key risk indicators to detect changes in risk exposure.

Extended Description:

Continuously tracks predefined metrics that signal changes in risk exposure.

Track Implementation of Treatment Actions

Process Identifier: 1.7.2.9.2

Hierarchy Level: 4

Brief Description:

Track implementation of risk treatment actions to ensure they are completed as planned.

Extended Description:

Follows up on risk mitigation plans to ensure actions are executed as planned.

Detect New or Evolving Risks

Process Identifier: 1.7.2.9.3

Hierarchy Level: 4

Brief Description:

Detect new or evolving risks arising from internal changes or external conditions.

Extended Description:

Identifies shifts in business operations or external conditions that may introduce new risks or alter existing ones through incident reports, audits, or environment scanning

Identify Control Failures

Process Identifier: 1.7.2.9.4

Hierarchy Level: 4

Brief Description:

Identify ineffective controls and unexpected control outcomes for review or escalation.

Extended Description:

Flag Ineffective risk management controls and any unexpected risk management control outcomes for review or escalation.

Review Risks

Process Identifier: 1.7.2.10

Hierarchy Level: 3

Brief Description:

Review Risks is the periodic process of validating and updating the organization's risk profile based on the latest data, treatment outcomes, control performance, and stakeholder feedback

Extended Description:

Review Risks is the periodic process of validating and updating the organization's risk profile based on the latest data, treatment outcomes, control performance, and stakeholder feedback. It involves reassessing risk likelihood and impact, evaluating the effectiveness of mitigation actions, and determining whether risks should be retired, re-treated, or escalated. The process ensures that the risk register remains accurate, relevant, and actionable, and supports continuous improvement through the identification of lessons learned and alignment with evolving business conditions and strategic priorities.

Reassess Risk Likelihood and Impact

Process Identifier: 1.7.2.10.1

Hierarchy Level: 4

Brief Description:

Reassess risk likelihood and impact using current data, incidents, and changed conditions.

Extended Description:

Update the risk assessment based on the latest data, incidents, and changes in business or external conditions. Use new evidence to recalibrate risk ratings. Reflect updated assumptions, probabilities, or consequence ranges. Consider residual risk vs. original baseline.

Evaluate Treatment Effectiveness

Process Identifier: 1.7.2.10.2

Hierarchy Level: 4

Brief Description:

Evaluate whether implemented risk treatments are achieving their intended outcomes.

Extended Description:

Assess whether the treatment actions implemented have achieved their intended purpose.

Update Risk Register

Process Identifier: 1.7.2.10.3

Hierarchy Level: 4

Brief Description:

Update the risk register to reflect current ratings, owners, treatments, and control effectiveness.

Extended Description:

Ensure the risk documentation reflects current classification and status. Modify risk ratings, owners, treatment status, classification and control effectiveness.

Validate Risk Profile with Stakeholders

Process Identifier: 1.7.2.10.4

Hierarchy Level: 4

Brief Description:

Validate the updated risk profile with stakeholders and escalate unresolved issues.

Extended Description:

Engage with risk owners, control managers, and leadership to confirm updates and escalate unresolved issues.

Identify Lessons Learned

Process Identifier: 1.7.2.10.5

Hierarchy Level: 4

Brief Description:

Identify lessons learned from treatment outcomes, near misses, and audit findings.

Extended Description:

Extract insights from treatment outcomes, near misses, or audit findings to inform future risk management strategy and training.

Decide on Retreatment or Risk closure

Process Identifier: 1.7.2.10.6

Hierarchy Level: 4

Brief Description:

Decide whether a risk should be closed, retreated, or escalated following reassessment.

Extended Description:

Determine whether a risk should be retired, re-treated, or escalated based on updated assessments and stakeholder consensus.

Report Risks

Process Identifier: 1.7.2.11

Hierarchy Level: 3

Brief Description:

Report Risks is the structured process of communicating risk-related insights, treatment progress, decisions, and exposure levels to internal and external stakeholders

Extended Description:

Report Risks is the structured process of communicating risk-related insights, treatment progress, decisions, and exposure levels to internal and external stakeholders. It ensures transparency, accountability, and informed decision-making by delivering timely, accurate, and audience-specific reports drawn from validated risk data. The process prioritizes critical risk information, supports two-way communication, and enables regulatory compliance and organizational responsiveness. It also includes the continuous improvement of reporting practices based on feedback, evolving stakeholder needs, and performance metrics.

Define Risk Reporting Requirements

Process Identifier: 1.7.2.11.1

Hierarchy Level: 4

Brief Description:

Define the information, audience, frequency, and format required for risk reporting.

Extended Description:

Determine what information needs to be reported, to whom, how frequently, and in what format based on stakeholder needs, regulatory obligations, and internal governance.

Validate Collected Risk Information

Process Identifier: 1.7.2.11.2

Hierarchy Level: 4

Brief Description:

Validate collected risk information for consistency, accuracy, and completeness.

Extended Description:

Gather relevant data from risk registers, assessments, treatments, and monitoring activities, ensuring consistency, accuracy, and completeness.

Analyze Risk Insights for Prioritization

Process Identifier: 1.7.2.11.3

Hierarchy Level: 4

Brief Description:

Analyze risk information to identify priority exposures, trends, and emerging issues.

Extended Description:

Identify the most significant risk trends, emerging issues, and critical exposures that require stakeholder attention or action.

Prepare Risk Reports for Distribution

Process Identifier: 1.7.2.11.4

Hierarchy Level: 4

Brief Description:

Prepare clear, audience-specific risk reports, dashboards, and summaries for distribution.

Extended Description:

Develop clear, actionable, and audience-specific outputs (e.g., dashboards, scorecards, summaries) using appropriate tools and visualizations.

Distribute Risk Reports to Stakeholders

Process Identifier: 1.7.2.11.5

Hierarchy Level: 4

Brief Description:

Distribute risk reports to the appropriate stakeholders through secure and effective channels.

Extended Description:

Deliver reports through secure and effective channels, ensuring the right information reaches the right audience at the right time.

Facilitate Stakeholder Communication

Process Identifier: 1.7.2.11.6

Hierarchy Level: 4

Brief Description:

Facilitate two-way stakeholder communication on risk insights, impacts, and actions.

Extended Description:

Support two-way communication with stakeholders by explaining key insights, clarifying impacts, and addressing questions or feedback.

Review Reporting Process for Improvement

Process Identifier: 1.7.2.11.7

Hierarchy Level: 4

Brief Description:

Review and improve the effectiveness of risk reporting content, formats, and delivery.

Extended Description:

Continuously assess the effectiveness of reporting practices and improve content, formats, and delivery mechanisms based on feedback and performance metrics.

Integrate Risk into Business Planning

Process Identifier: 1.7.2.12

Hierarchy Level: 3

Brief Description:

Integrate Risk into Business Planning embeds risk insights, appetite boundaries, and assessment outputs into strategic, financial, and operational planning processes

Extended Description:

Integrate Risk into Business Planning embeds risk insights, appetite boundaries, and assessment outputs into strategic, financial, and operational planning processes. It ensures that planning decisions are risk-informed, resilient, and aligned with the organization's tolerance for uncertainty. This process supports the evaluation of risk-return trade-offs, prioritization of investments, and adjustment of assumptions based on risk treatments. It fosters collaboration between risk, strategy, and finance teams, ensures consistent application of business continuity methodologies, and enables continuous improvement through the monitoring of planning outcomes.

Identify Planning Activities Impacted by Risk

Process Identifier: 1.7.2.12.1

Hierarchy Level: 4

Brief Description:

Identify the planning activities and domains that require integration of risk information.

Extended Description:

Determine which planning domains (strategic, operational, financial, project-level) require risk integration.

Align Risk Appetite with Business Priorities

Process Identifier: 1.7.2.12.2

Hierarchy Level: 4

Brief Description:

Align planning objectives and resource choices with defined risk appetite and tolerances.

Extended Description:

Ensure planning objectives and resources align with the organization's defined risk appetite and tolerances.

Incorporate Risk Assessments into Planning Inputs

Process Identifier: 1.7.2.12.3

Hierarchy Level: 4

Brief Description:

Incorporate risk assessments into planning inputs to support prioritization and resource allocation.

Extended Description:

Integrate risk scenarios, likelihoods, and impacts into planning to guide prioritization and resource allocation.

Analyze Risk Exposure in Planning Scenarios

Process Identifier: 1.7.2.12.4

Hierarchy Level: 4

Brief Description:

Analyze risk exposure and trade-offs across planning scenarios to support resilient decisions.

Extended Description:

Evaluate risk-return trade-offs across planning options and scenarios to inform resilient choices.

Adjust Planning Assumptions Based on Risk Treatments

Process Identifier: 1.7.2.12.5

Hierarchy Level: 4

Brief Description:

Adjust planning assumptions to reflect current or planned risk treatment effectiveness.

Extended Description:

Update assumptions to reflect the effectiveness of current or planned risk mitigation strategies.

Collaborate with Strategy and Finance Teams

Process Identifier: 1.7.2.12.6

Hierarchy Level: 4

Brief Description:

Collaborate with strategy and finance teams to embed risk insights in planning decisions.

Extended Description:

Embed risk insights into strategic and financial planning to ensure coordinated decision-making.

Monitor Effectiveness of Risk Integration in Plans

Process Identifier: 1.7.2.12.7

Hierarchy Level: 4

Brief Description:

Monitor whether risk is being effectively integrated into plans and adjust where needed.

Extended Description:

Continuously review planning outcomes and adjust processes where risk integration is insufficient.

Maintain Business Continuity Methodologies

Process Identifier: 1.7.2.12.8

Hierarchy Level: 4

Brief Description:

Maintain and improve business continuity methodologies, standards, and supporting practices.

Extended Description:

Ensure consistent adoption of BCM practices, standards, and methodologies across the enterprise. Continuously improve and update BCM methods, incorporating lessons learned and integrating disaster recovery practices.

Knowledge Management

Process Identifier: 1.7.4

Hierarchy Level: 2

Brief Description:

Knowledge Management business activity manage the establishment, assessment, operations and evaluation of processes and capabilities that support knowledge capture, knowledge organization, knowledge operations and knowledge evaluation across the enterprise.

Extended Description:

Knowledge Management business activity manage the establishment, assessment, operations and evaluation of processes and capabilities that support knowledge capture, knowledge organization, knowledge operations and knowledge evaluation across the enterprise. Knowledge Management processes support the organization across a gamut of key activities including protecting its intellectual properties, business resilience and as well manages the standards for creating and managing information and information capture and stored, assigned, and distributed. Knowledge in the enterprise includes both the tacit and explicit knowledge contained with the enterprise.

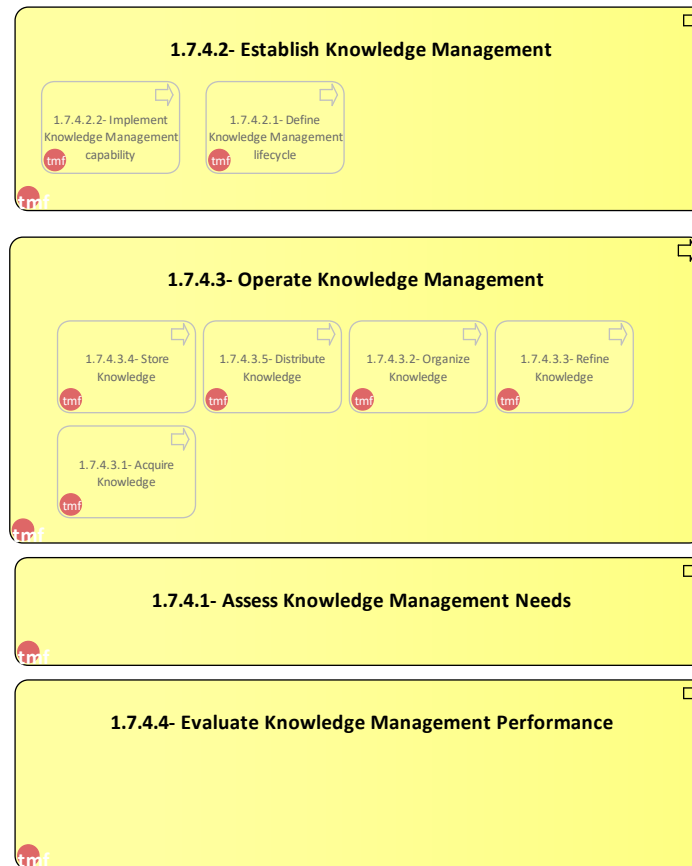

Figure 3: Knowledge Management Children

Assess Knowledge Management Needs

Process Identifier: 1.7.4.1

Hierarchy Level: 3

Brief Description:

Assess Knowledge Management needs business activity analyzes to understand the knowledge needs of enterprise functions, translated the business needs into knowledge management targets and identify knowledge management activities to address the needs.

Extended Description:

Assess Knowledge Management needs business activity analyzes to understand the knowledge needs of enterprise functions, translated the business needs into knowledge management targets and identify knowledge management activities to address the needs. Assess Knowledge Management Needs ensures that assessment of the process and capabilities for knowledge management capture current state of knowledge management activities across enterprise functions. The assessment process solicits input from enterprise functions and 'Evaluate Knowledge Management Performance' to identify improvements for knowledge management.

Establish Knowledge Management

Process Identifier: 1.7.4.2

Hierarchy Level: 3

Brief Description:

Establish Knowledge Management business activity sets up the processes and capabilities that are required to institutionalize and operationalize knowledge management activities across all the enterprise.

Extended Description:

Establish Knowledge Management business activity sets up the processes and capabilities that are required to institutionalize and operationalize knowledge management activities across all the enterprise. Establish Knowledge Management business activity leverage the strategic Initiative of the enterprise as an input to make knowledge management support the business goals. It includes defining 'knowledge management lifecycle' and 'implementing knowledge management capabilities'.

Define Knowledge Management lifecycle

Process Identifier: 1.7.4.2.1

Hierarchy Level: 4

Brief Description:

Define Knowledge Management Lifecycle business activity is responsible for describing all the stages that support knowledge management across the enterprise.

Extended Description:

Define Knowledge Management Lifecycle business activity is responsible for describing all the stages that support knowledge management across the enterprise. Define Knowledge Management Lifecycle defines 'who', 'what', 'when', 'where' and 'how' of activities that support institutionalizing and operationalizing knowledge management. This includes description of expectation for the creation, sharing, auditing, organizing and storage of knowledge in support of the enterprises business goals.

Implement Knowledge Management capability

Process Identifier: 1.7.4.2.2

Hierarchy Level: 4

Brief Description:

Implement Knowledge Management Capability business activity puts into effect the required capabilities (processes, people and technology) that support operationalizing knowledge management activities.

Extended Description:

Implement Knowledge Management Capability business activity puts into effect the required capabilities (processes, people and technology) that support operationalizing knowledge management activities. Implement Knowledge Management Capability covers the processes and mechanisms that support the acquisition to dissemination of knowledge within the enterprises business functions, and with stakeholders.

Evaluate Knowledge Management Performance

Process Identifier: 1.7.4.4

Hierarchy Level: 3

Brief Description:

Evaluate Knowledge Management Performance business activity assesses performance of knowledge management outcomes based on how knowledge management lifecycle and knowledge management operations support the achievement of business goals.

Extended Description:

Evaluate Knowledge Management Performance business activity assesses performance of knowledge management outcomes based on how knowledge management lifecycle and knowledge management operations support the achievement of business goals. Evaluate Knowledge Management Performance supports 'assess knowledge management needs', 'establish knowledge management', and 'knowledge management operations' by preventing repeated missteps, guiding development, and sharing of knowledge to give the enterprise and its business functions a competitive edge.

Operate Knowledge Management

Process Identifier: 1.7.4.3

Hierarchy Level: 3

Brief Description:

Operate Knowledge Management business activity controls and administers day-to-day tasks that support knowledge acquisition, knowledge organization, knowledge refinement, knowledge storage, knowledge distribution and knowledge application.

Extended Description:

Operate Knowledge Management business activity controls and administers day-to-day tasks that support knowledge acquisition, knowledge organization, knowledge refinement, knowledge storage, knowledge distribution and knowledge application. Operate Knowledge Management supports enterprise business functions to identify knowledge objects, run different knowledge operation models, and address their knowledge handling goals.

Acquire Knowledge

Process Identifier: 1.7.4.3.1

Hierarchy Level: 4

Brief Description:

Acquire Knowledge business activity handles gathering or collecting knowledge from various sources, including discovering knowledge based on value it brings to the organization.

Extended Description:

Acquire Knowledge business activity handles gathering or collecting knowledge from various sources, including discovering knowledge based on value it brings to the organization. This business activity adds new knowledge to a knowledge base and support 'Refine Knowledge', 'Distribute Knowledge' and 'Apply Knowledge'.

Organize Knowledge

Process Identifier: 1.7.4.3.2

Hierarchy Level: 4

Brief Description:

Organize Knowledge business activity handles the classification, mapping, indexing, and categorization of knowledge to support activities that acquire, store and retrieve knowledge.

Extended Description:

Organize Knowledge business activity handles the classification, mapping, indexing, and categorization of knowledge to support activities that acquire, store and retrieve knowledge. The enterprise needs to make connections between different knowledge objects. With connections from knowledge objects, the enterprise structures knowledge in a way that accurately and meaningfully organizes knowledge for refinement, storage, distribution and application. Organize Knowledge uses "systems" and processes to generate, transform, manage, use, and transfer knowledge-based products and services to achieve enterprise business goals and objectives.

Refine Knowledge

Process Identifier: 1.7.4.3.3

Hierarchy Level: 4

Brief Description:

Refine Knowledge business activity handles the evaluation, analysis and optimization of knowledge to be stored by the enterprise.

Extended Description:

Refine Knowledge business activity handles the evaluation, analysis and optimization of knowledge to be stored by the enterprise. Refine Knowledge enables the enterprise to iteratively improve its knowledge operations activities in an effort to improve the quality of the enterprises knowledge objects.

Store Knowledge

Process Identifier: 1.7.4.3.4

Hierarchy Level: 4

Brief Description:

Store Knowledge business activity handles the storage of knowledge objects to support the enterprises knowledge management goals.

Extended Description:

Store Knowledge business activity handles the storage of knowledge objects to support the enterprises knowledge management goals. Store knowledge ensures the organization can formally account for knowledge it in its possession through well-defined storage medium/media.

Distribute Knowledge

Process Identifier: 1.7.4.3.5

Hierarchy Level: 4

Brief Description:

Distribute Knowledge business activity handles tasks that assign and share knowledge among enterprise business functions through various defined techniques, people, and technologies.

Extended Description:

Distribute Knowledge business activity handles tasks that assign and share knowledge among enterprise business functions through various defined techniques, people, and technologies.

Financial Management

Process Identifier: 1.7.5

Hierarchy Level: 2

Brief Description:

Financial Management business process plans, organizes, directs, and controls the organizations financial resources and activities, such as financial planning, budgeting, forecasting, financial analysis and reporting, investment management, and cash flow to realize the enterprise's operating goals.

Extended Description:

Financial Management business process plans, organizes, directs, and controls the organizations financial resources and activities, such as financial planning, budgeting, forecasting, financial analysis and reporting, investment management, and cash flow to realize the enterprise's operating goals.

Financial Management establishes financial goals and objectives, identifies financial risks and opportunities, allocates resources to support financial goals, establishes financial targets, monitors and controls expenses, predicts future financial performance and provides financial information (to support and/or comply with enterprise reporting standards and obligations- internal and statutory).

Figure 4: Financial Management Children

Define Financial Management Approach

Process Identifier: 1.7.5.1

Hierarchy Level: 3

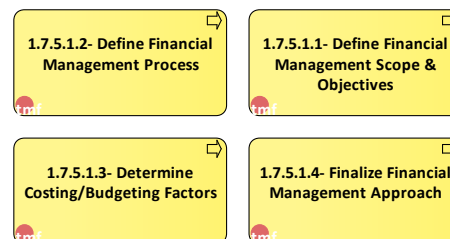

Brief Description:

This process entails the organization leaders defining financial controls and procedures, and obtaining approval for the financial management approach from key stakeholders, including the sponsor's finance entity.

Extended Description:

Define Financial Management Approach ensures that the program leadership has explicitly defined the financial controls

and processes for the program, including financial management and the program financial reporting. Obtain approval of the program financial management Approach from key stakeholders, including the sponsoring organization finance entity.

*Figure 5: Define Financial Management Approach Children*

Define Financial Management Scope & Objectives

Process Identifier: 1.7.5.1.1

Hierarchy Level: 4

Brief Description:

Ensures that the program leadership has defined the scope and objectives of the overall Financial Management process.

Extended Description:

Objectives entails the organization leaders defining financial controls and procedures, and obtaining approval for the financial management approach from key stakeholders, including the sponsor's finance entity. This process ensures that the program leadership has defined the scope and objectives of the overall Financial Management process, including investment decisions, financial decisions and dividend decisions. The scope of Financial Management generally involves the planning, organizing, directing, and controlling of financial activities such as procurement and utilization of funds. Typical objectives in Financial Management are:

- 1) Profit maximization,
- 2) Wealth maximization,
- 3) Maintaining proper cash flow,
- 4) Survival of company and
- 5) Creating reserves.

Define Financial Management Process

Process Identifier: 1.7.5.1.2

Hierarchy Level: 4

Brief Description:

This process ensures that the program leadership has defined the overall Financial Management process.

Extended Description:

Define Financial Management Process ensures that the program leadership has defined the overall Financial Management process. The Financial Management Process is a systematic approach to managing an organization's financial resources. It involves three key elements:

- 1) Financial Planning
- 2) Financial Control
- 3) Financial Decision Making

Determine Costing/Budgeting Factors

Process Identifier: 1.7.5.1.3

Hierarchy Level: 4

Brief Description:

The process of identifying and analyzing the various elements that influence the costs and budget requirements of an enterprise's operations, projects, or activities.

Extended Description:

The Determine Costing/Budgeting Factors process involves identifying and analyzing elements that influence costs and budget requirements. Key steps include identifying cost drivers, analyzing historical data, estimating costs, setting budget assumptions, allocating financial resources, and monitoring and adjusting as needed. The main goals are to ensure accurate budgeting, optimize financial resource allocation, and maintain financial control.

Finalize Financial Management Approach

Process Identifier: 1.7.5.1.4

Hierarchy Level: 4

Brief Description:

Finalizing a Financial Management Approach involves understanding and implementing effective financial management

Extended Description:

Finalizing a Financial Management Approach involves understanding and implementing effective financial management which includes:

Strategic Financial Decision-Making, Data-Driven Insights and Stakeholder Engagement.

The approach should ensure responsible and sustainable financial practices .In addition to these, procedures are set regarding how the finance team will process and distribute financial data, like invoices, payments, and reports, with security and accuracy. These written procedures also outline who is responsible for making financial decisions at the company—and who signs off on those decisions. The finalized approach should align with the organization’s goals, resources, and risk tolerance.

Manage Financial Resources

Process Identifier: 1.7.5.3

Hierarchy Level: 3

Brief Description:

Manage Financial Resources process involves managing capital, maintaining financial records, and generating reports for internal use, financial markets, and regulatory purposes.

Extended Description:

Manage Financial Resources process consists of the following tasks:

Managing Capital: Involves securing and allocating financial resources to meet the organization's needs.

Maintaining Financial Records: Accurate and timely recording of all financial transactions, this includes bookkeeping, maintaining ledgers, and ensuring compliance with accounting standards.

generating Reports: Financial reports are essential for internal use, financial markets, and regulatory purposes. These reports include balance sheets, income statements, and cash flow statements. They provide insights into the organization's financial health, support strategic planning, and ensure transparency and compliance with regulatory requirements.

Figure 6: Manage Financial Resources Children

Develop Budgets

Process Identifier: 1.7.5.3.1

Hierarchy Level: 4

Brief Description:

Develop Budget business process creates periodic financial plans that project income and/or expenses across the enterprise's operating units, guiding financial decision-making and resource allocation to achieve business objectives.

Extended Description:

The Develop Budgets activity involves creating financial plans for a specific period to ensure the enterprise's financial resources are used effectively and efficiently. This includes setting financial goals, estimating revenues and expenses, and allocating financial resources to various departments and projects. The main objectives are to align the budget with the enterprise's strategic goals, control expenditures, and measure financial performance to achieve business objectives.

Allocate Financial Resources

Process Identifier: 1.7.5.3.2

Hierarchy Level: 4

Brief Description:

The process of distributing the enterprise's financial resources to various departments, projects, or activities to ensure they are used effectively and efficiently to achieve business objectives.

Extended Description:

Allocate Financial Resources process involves distributing the enterprise's financial resources to various departments, projects, or activities. The key steps include identifying financial needs, allocating the budget based on priorities, and continuously monitoring and adjusting the allocations. The main goals are to ensure optimal financial resource utilization, align financial allocations with strategic goals, and maintain financial control.

This process was renamed in 24.5 old name was Manage Resource Allocation

Design Capital Structure

Process Identifier: 1.7.5.3.3

Hierarchy Level: 4

Brief Description:

Designing capital structure is the process of determining the optimal mix of debt, equity, and other financial instruments to fund the enterprise's operations and growth while minimizing the cost of capital and maximizing shareholder value.

Extended Description:

The Design Capital Structure process involves determining the best mix of debt, equity, and other financial instruments to fund an enterprise's operations and growth. The key steps include assessing financial needs, identifying funding sources, analyzing costs and risks, and optimizing the capital mix. The main goals are to minimize the cost of capital, manage risks, and align the capital structure with the enterprise's long-term financial goals.

Manage Financial Risk

Process Identifier: 1.7.5.3.4

Hierarchy Level: 4

Brief Description:

Manage Financial Risk activity administers risk controls for the enterprises direct and indirect financial transactions to realize a shared understanding of financial threats, and control current and potential financial risks.

Extended Description:

Manage Financial Risk includes tasks to identify existing and potential financial risks that could negatively impact the organization's financial profile, assess and quantify financial risks to prioritize them based on their impact, define and implement strategies to control financial threats, and continuously monitor the effectiveness of strategies that reduce financial risk. This enables the enterprise to clearly understand its financial risk profile, and develop approach to de-risk financial risks.

Manage Financial Transactions

Process Identifier: 1.7.5.4

Hierarchy Level: 3

Brief Description:

Manage Financial Transactions is the process of overseeing and handling the movement of money within the enterprise, including payments, receipts, and transfers, to ensure accuracy, security, and compliance with financial regulations.

Extended Description:

Manage Financial Transactions process involves overseeing and handling the movement of money within an enterprise. Key steps include recording transactions, processing payments and receipts, reconciling financial records with bank statements, and ensuring compliance with financial regulations. The main goals are to maintain accurate financial records, ensure security, and comply with legal requirements.

This process was renamed in 24.5 old name was Process Financial Transactions

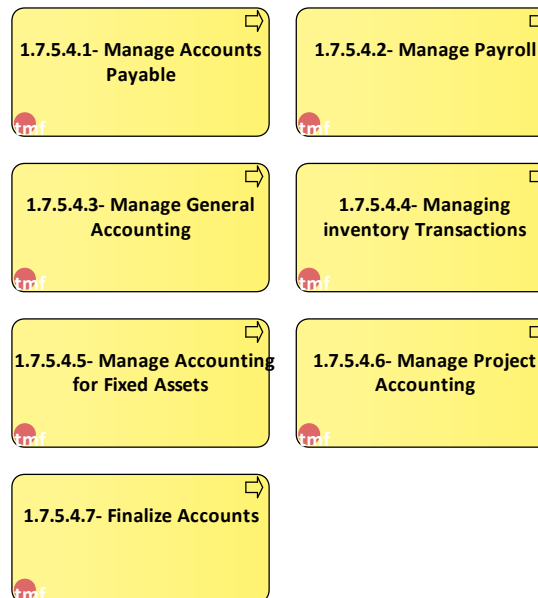

Figure 7: Process Financial Transactions Children

Manage Accounts Payable

Process Identifier: 1.7.5.4.1

Hierarchy Level: 4

Brief Description:

Manage Accounts Payable is the process of handling and overseeing the enterprise's obligations to pay off short-term debts to its creditors or suppliers.

Extended Description:

Manage Accounts Payable process involves handling the enterprise's short-term debts to suppliers. Key steps include processing and verifying invoices, obtaining necessary approvals, scheduling and making payments, maintaining accurate records, and reconciling accounts with supplier statements. The main goals are to manage cash flow, maintain good supplier relationships, ensure financial accuracy, and comply with regulations.

This process was renamed in 24.5 old name was Process Accounts Payable

Manage Payroll

Process Identifier: 1.7.5.4.2

Hierarchy Level: 4

Brief Description:

Manage Payroll process is the process of administering and overseeing the payment of wages and salaries to employees, ensuring accuracy, compliance, and timely disbursement.

Extended Description:

Manage Payroll process involves overseeing the payment of wages and salaries to employees. Key steps include managing employee data, calculating payroll, processing payments, maintaining records, and ensuring compliance with laws and regulations. The main goals are to ensure accurate and timely payments, comply with legal requirements, and maintain accurate financial records.

This process was renamed in 24.5 old name was Process Payroll

Manage General Accounting

Process Identifier: 1.7.5.4.3

Hierarchy Level: 4

Brief Description:

Manage General Accounting Transactions focuses on the detailed steps involved in recording and managing individual financial transactions, This includes identifying, recording, posting to the ledger, preparing trial balances, adjusting entries, and finalizing accounts before closing the books.

Extended Description:

Manage General Accounting Transactions focuses on the detailed steps involved in recording and managing individual financial transactions. This includes the following tasks:

Record Transactions

Post to Ledger

Trial Balance

Adjust Entries

Prepare financial reports

Finalize accounts for the next period

This process differs from General Accounting Management which has a broader oversight of the entire accounting process, ensuring accuracy and compliance.

This process was renamed in 24.5. Old name was Process General Accounting

Managing inventory Transactions

Process Identifier: 1.7.5.4.4

Hierarchy Level: 4

Brief Description:

Manage Inventory Transactions is the process of tracking and overseeing the movement of inventory items within an enterprise, ensuring accuracy, efficiency, and alignment with inventory management policies.

Extended Description:

Managing inventory Transactions process ensures accurate tracking and control of inventory within an organization, it involves the following steps:

Receiving Inventory: When new inventory arrives, it is checked for accuracy against purchase orders and recorded into the inventory management system.

Storing Inventory: This includes organizing items in the warehouse and updating inventory records.

Issuing Inventory: When inventory is needed for production or sales, it is issued from storage and the transaction is recorded to update inventory levels.

Tracking Inventory Movements: All movements of inventory, including transfers between locations, returns, and adjustments, are tracked and recorded to maintain accurate inventory records.

Conducting Inventory Audits: Regular audits are conducted to verify the accuracy of inventory records and identify any discrepancies.

Reporting: Generate reports on inventory levels, movements, and discrepancies to provide insights for decision-making and ensure efficient inventory management.

By effectively managing inventory transactions, organizations can maintain accurate inventory records, reduce costs, and improve overall efficiency.

This process was renamed in 24.5 Process Inventory Transactions

Manage Accounting for Fixed Assets

Process Identifier: 1.7.5.4.5

Hierarchy Level: 4

Brief Description:

The process of tracking, recording, and managing the financial aspects of the enterprise's fixed assets, such as property, plant, and equipment, to ensure accurate financial reporting and compliance with accounting standards.

Extended Description:

Manage Accounting for Fixed Assets process involves tracking, recording, and managing the financial aspects of an enterprise's fixed assets. Key steps include identifying and valuing assets, calculating depreciation, tracking maintenance and upgrades, documenting asset disposal, and preparing financial reports. The main goals are to ensure financial accuracy, comply with regulations, and support informed decision-making about assets.

This process was renamed in 24.5 old Account for Fixed Assets

Manage Project Accounting

Process Identifier: 1.7.5.4.6

Hierarchy Level: 4

Brief Description:

The process of tracking, recording, and managing the financial aspects of specific projects to ensure accurate financial reporting, budget adherence, and effective financial resource allocation.

Extended Description:

Manage Project Accounting process involves tracking and managing the financial aspects of specific projects. Key steps include developing project budgets, tracking costs, recognizing revenue, preparing financial reports, analyzing variances, and ensuring compliance. The main goals are to maintain budget control, provide accurate financial information, optimize financial resource allocation, and measure project performance.

This process was renamed n 24.5 old name was Project Accounting

Finalize Accounts

Process Identifier: 1.7.5.4.7

Hierarchy Level: 4

Brief Description:

The process of finalizing all accounting activities for a specific period, ensuring that all financial transactions are accurately recorded, and preparing the final financial statements.

Extended Description:

Finalize Accounts process involves finalizing all accounting activities for a specific period. Key steps include recording final transactions, reconciling accounts, reviewing and adjusting entries, preparing financial statements, closing temporary accounts, and obtaining necessary approvals. The main goals are to ensure financial accuracy, comply with regulations, measure performance, and prepare for the next accounting period.

this process was renamed in 24.5 old name was Close the Books

Report Financial Results

Process Identifier: 1.7.5.5

Hierarchy Level: 3

Brief Description:

The process of preparing and presenting financial statements and reports that summarize an enterprise's financial performance and position for a specific period, ensuring accuracy, transparency, and compliance with accounting standards and regulations.

Extended Description:

Report Financial Results process involves preparing and presenting financial statements that summarize an enterprise's financial performance and position. Key steps include collecting data, preparing financial statements, analyzing results, ensuring compliance, presenting to stakeholders, and maintaining documentation. The main goals are to ensure transparency, support decision-making, comply with regulations, and measure financial performance accurately.

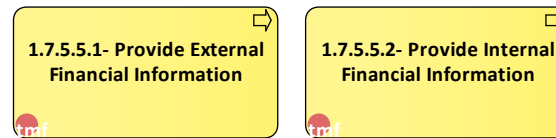

Figure 8: Report Financial Results Children

Provide External Financial Information

Process Identifier: 1.7.5.5.1

Hierarchy Level: 4

Brief Description:

This process ensures that all internal stakeholders, such as accountable and responsible functions have clear and accurate financial information.

Extended Description:

Provide External Financial Information task is responsible for compiling and communicating financial records, including specific financial activities and performance, to convey meaningful financial insights to external stakeholders. It includes tasks such as collecting financial data/information, organizing financial data/information, preparing financial information according to requirements or requests, and communicating or filing financial information to external stakeholders.

Provide Internal Financial Information

Process Identifier: 1.7.5.5.2

Hierarchy Level: 4

Brief Description:

This process ensures that all internal stakeholders, such as accountable and responsible functions have clear and accurate financial information.

Extended Description:

Provide Internal Financial Information task is responsible for compiling and communicating financial records, including specific financial activities and performance, to convey meaningful financial insights for internal stakeholders. Provide Internal Financial Information includes tasks such as collecting financial data/information, organizing financial data/information, preparing financial information according to requirements or requests, and communicating or delivering financial information within the enterprise.

Manage Treasury

Process Identifier: 1.7.5.6

Hierarchy Level: 3

Brief Description:

The Manage Treasury process involves coordinating financial activities between the enterprise and external institutions (banks, stock issuers, etc.) as well as internal company entities.

Extended Description:

Manage Treasury process encompasses all activities between the enterprise and financial institutions such as banks, bond and stock issuers/brokers, commercial paper brokers, and SEC representatives. It also includes communication with internal company entities such as payment remittance offices, accounts payable offices, and payroll offices for the monitoring and planning of the daily requirements for cash. The main activities within the process include: Manage daily cash needs,

Determine short term cash investments, Plan yearly treasury requirements, Manage currency requirements and transactions Determine and manage external financing vehicles and approaches, Develop, and monitor internal financing strategy, Manage debt/equity mix, Prepare required quarterly and annual reports, Manage company stock transactions (issue, buy back, ownership) Manage insurance programs.

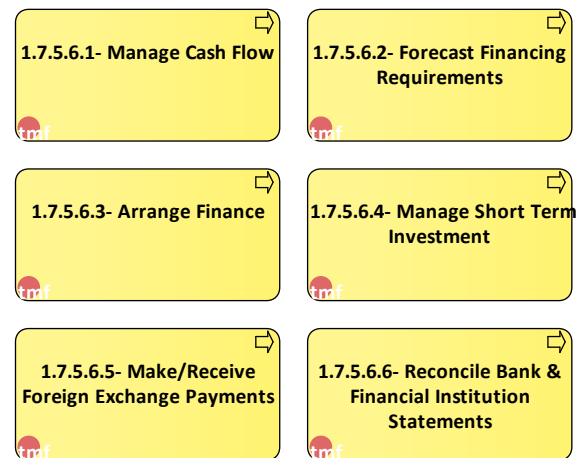

Figure 9: Manage Treasury Children

Manage Cash Flow

Process Identifier: 1.7.5.6.1

Hierarchy Level: 4

Brief Description:

This process involves monitoring, analyzing, and optimizing cash inflows and outflows within the organization.

Extended Description:

Manage Cash Flow process consists of monitoring, analyzing, and optimizing the inflows and outflows of cash in the organization. It involves understanding the organization's financial situation to more accurately budget and forecast its cash flow needs. Essentially, it's about having the right amount of money in the right places at the right times. Effective cash flow management empowers organizations to anticipate challenges, seize opportunities, and lay the groundwork for sustainable growth and profitability.

Forecast Financing Requirements

Process Identifier: 1.7.5.6.2

Hierarchy Level: 4

Brief Description:

The Forecasting Financing Requirements involves estimating the financial needs of the organization.

Extended Description:

Forecasting Financing Requirements process involves estimating the financial needs of the organization. It helps determine sales, costs of customer acquisition, capital for specific projects, and other expenses necessary for effective business management. This pre-emptive forecast enables sound decision-making and ensures that the organization is well-prepared for its financial obligations.

Arrange Finance

Process Identifier: 1.7.5.6.3

Hierarchy Level: 4

Brief Description:

Arranging Finance process refers to securing funds or capital for a specific purpose.

Extended Description:

<div>The Arranging Finance process refers to securing funds or capital for a specific purpose. It involves organizing and structuring financial resources to meet specific requirements.</div>

Manage Short Term Investment

Process Identifier: 1.7.5.6.4

Hierarchy Level: 4

Brief Description:

Managing Short-Term Investments process involves handling financial assets that can be easily converted to cash within a relatively short period, typically within five years.

Extended Description:

Managing Short-Term Investments process involves handling financial assets that can be easily converted to cash within a relatively short period, typically within five years. Managing Short-term Investments involves the following key decisions:

1. Types of Short-Term Investments
2. Company Perspective
3. Benefits (liquidity, flexibility, etc)

Make/Receive Foreign Exchange Payments

Process Identifier: 1.7.5.6.5

Hierarchy Level: 4

Brief Description:

Making and receiving foreign exchange payments involves handling cross-border transactions that require currency exchange.

Extended Description:

Making and receiving foreign exchange payments involves handling cross-border transactions that require currency exchange. Various payment methods can be used, including wire transfers, global ACH, PayPal, prepaid debit cards, credit cards, and checks.

Reconcile Bank & Financial Institution Statements

Process Identifier: 1.7.5.6.6

Hierarchy Level: 4

Brief Description:

Reconciling bank statements involves comparing the organization's financial records with its monthly bank statements.

Extended Description:

Reconciling bank statements involves comparing the organization's financial records with its monthly bank statements. By checking all deposits and withdrawals helps ensure accuracy and gain a clearer picture of the organization's finances. This process is essential for budgeting and identifying any discrepancies between the organization's records and the bank's statement.

Perform Regulatory & Tax Accounting

Process Identifier: 1.7.5.7

Hierarchy Level: 3

Brief Description:

The Regulatory and Tax Accounting process involves gathering, analyzing, and reporting data required by government entities.

Extended Description:

Regulatory and Tax Accounting process encompasses all the activities associated with gathering, determining, and displaying data required by government entities. It includes the gathering of financial information, usage data, statistics, and ratios required to meet regulatory requirements. Additionally, it includes the computation and remittance of all required taxes. The key regulatory activities within the process include: Perform required regulatory journal entries and adjustments, Produce regulatory required reports, Participate in hearings and other government activities. Regulatory requirements and activities will vary by country. For example, in the United States, the following is required: Regulatory inter/intrastate

separations, Regulatory/non regulatory separations, Cost of services studies, Local commission reporting, FCC reporting, Rate case preparation, Support for rate filings, Responses to regulator information requests. The key tax and accounting

activities within the process include: Gather financial data, Gather property investment location records, Gather tax rates and tax basis rules, Compute national, local/city, and state/provincial tax liabilities, Remit taxes due.

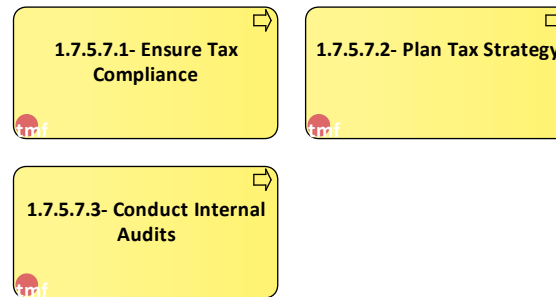

Figure 10: Perform Regulatory & Tax Accounting Children

Ensure Tax Compliance

Process Identifier: 1.7.5.7.1

Hierarchy Level: 4

Brief Description:

Tax compliance refers to fulfilling legal obligations related to taxation imposed by the government.

Extended Description:

Ensure Tax compliance refers to fulfilling legal obligations related to taxation imposed by the government. The primary objective is to ensure timely and accurate filing of tax returns in accordance with tax laws and regulations. It involves:

1. Accurate calculation and reporting of taxable income and deductions.

2. Timely submission of tax returns and necessary documentation.
3. Prompt payment of due taxes (including estimated taxes, employment taxes, and sales taxes).
4. Maintaining accurate records for tax-related transactions.
5. Honesty, transparency, and adherence to all legal tax obligations.

Plan Tax Strategy

Process Identifier: 1.7.5.7.2

Hierarchy Level: 4

Brief Description:

Tax planning involves analyzing and arranging the organization's financial situation to maximize tax breaks and minimize tax liabilities legally and efficiently.

Extended Description:

Plan Tax Strategy process involves analyzing and arranging the organization's financial situation to maximize tax breaks and minimize tax liabilities legally and efficiently. Following are some key concepts:

1. Understanding applicable Tax Brackets
2. Using Tax Credits and Deductions
3. Choosing between Standard Deduction and Itemizing
4. Leveraging Tax-Advantaged Accounts
5. Keeping Good Records

Conduct Internal Audits

Process Identifier: 1.7.5.7.3

Hierarchy Level: 4

Brief Description:

The purpose of conducting internal audits is to evaluate and improve internal controls, risk management practices, and compliance with applicable laws and regulations.

Extended Description:

Conduct Internal Audits involves planning, auditing, reporting, and monitoring steps. By catching and correcting issues before external audits, internal audits enhance overall organizational effectiveness. An internal audit is a systematic and independent examination process conducted within an organization. Its purpose is to evaluate and improve internal controls, risk management practices, and compliance with applicable laws and regulations. Internal auditors assess various aspects, including financial processes, corporate governance, and operational efficiency. The process typically

Human Resources Management

Process Identifier: 1.7.7

Hierarchy Level: 2

Brief Description:

The Human Resources Management process grouping provides the human resources infrastructure for the people resources that the enterprise uses to fulfil its objectives.

Extended Description:

The Human Resources Management process grouping provides the human resources infrastructure for the people resources that the enterprise uses to fulfill its objectives.

For example, Human Resources Management processes provide salary structures by level, coordinate performance appraisal and compensation guidelines and set policies in relation to people management, employee benefit programs, etc.

Moreover it supports the definition of the organization of the enterprise and coordinates its reorganizations.

Note that Human Resources Management processes are concerned with preparing people to carry out their assigned tasks (e.g., organizing training, remuneration, recruiting, etc.). The actual assignment of specific tasks is the responsibility of Work Force Management processes.

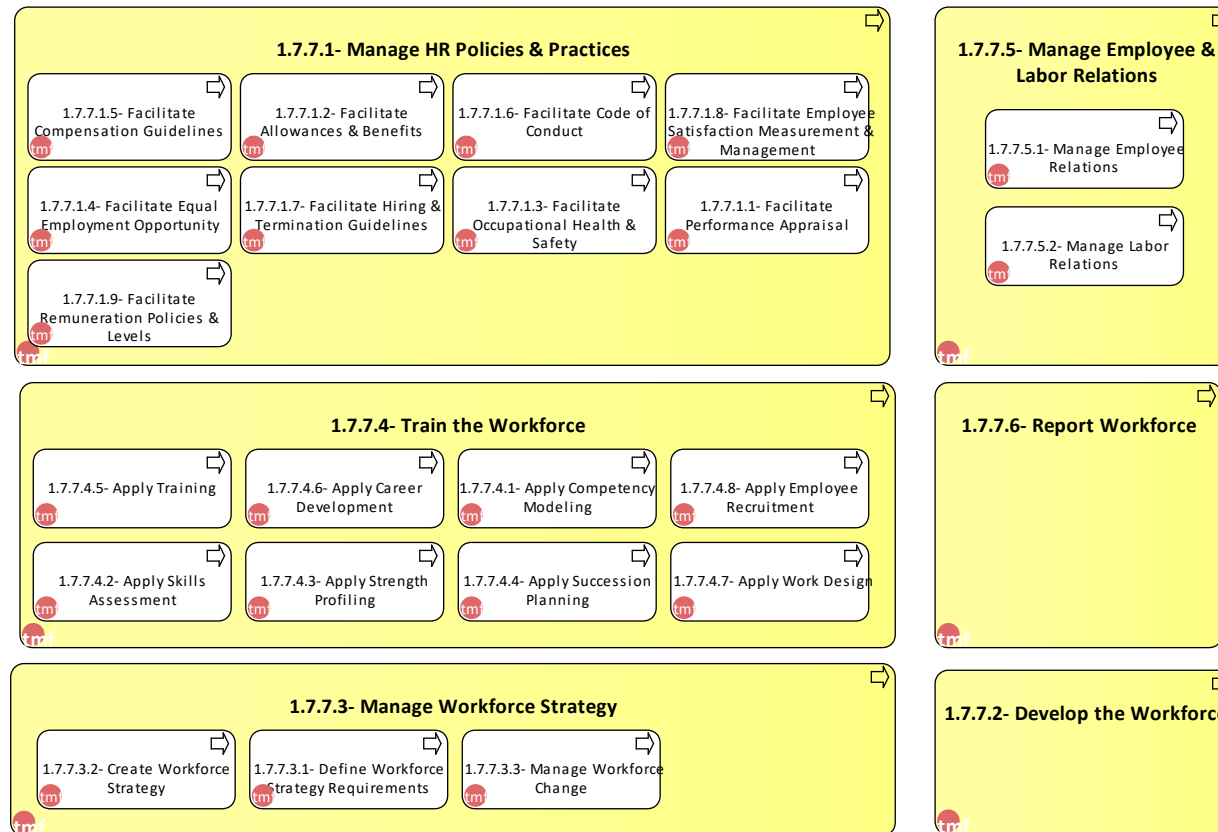

Figure 11: Human Resources Management Children

Manage HR Policies & Practices

Process Identifier: 1.7.7.1

© TM Forum 2026. All Rights Reserved

121 of 428

Hierarchy Level: 3

Brief Description:

HR Policies & Practices include the processes that support people management throughout the enterprise.

Extended Description:

HR Policies & Practices include the processes that support people management throughout the enterprise, e.g., performance appraisal, remuneration policies, remuneration levels, allowances, benefits, occupational health and safety, equal employment opportunity, compensation guidelines, code of conduct, hiring and termination guidelines, employee satisfaction measurement and management, etc.

Facilitate Performance Appraisal

Process Identifier: 1.7.7.1.1

Hierarchy Level: 4

Brief Description:

Support people management throughout the enterprise for performance appraisal

Extended Description:

Not used for this process element.

Facilitate Allowances & Benefits

Process Identifier: 1.7.7.1.2

Hierarchy Level: 4

Brief Description:

Support people management throughout the enterprise for allowances, benefits

Extended Description:

Not used for this process element.

Facilitate Occupational Health & Safety

Process Identifier: 1.7.7.1.3

Hierarchy Level: 4

Brief Description:

Support people management throughout the enterprise for occupational health and safety

Extended Description:

Not used for this process element.

Facilitate Equal Employment Opportunity

Process Identifier: 1.7.7.1.4

Hierarchy Level: 4

Brief Description:

Support people management throughout the enterprise for equal employment opportunity

Extended Description:

Not used for this process element.

Facilitate Compensation Guidelines

Process Identifier: 1.7.7.1.5

Hierarchy Level: 4

Brief Description:

Support people management throughout the enterprise for compensation guidelines

Extended Description:

Not used for this process element.

Facilitate Code of Conduct

Process Identifier: 1.7.7.1.6

Hierarchy Level: 4

Brief Description:

Support people management throughout the enterprise for code of conduct

Extended Description:

Not used for this process element.

Facilitate Hiring & Termination Guidelines

Process Identifier: 1.7.7.1.7

Hierarchy Level: 4

Brief Description:

Support people management throughout the enterprise for hiring and termination guidelines

Extended Description:

Not used for this process element.

Facilitate Employee Satisfaction Measurement & Management

Process Identifier: 1.7.7.1.8

Hierarchy Level: 4

Brief Description:

Support people management throughout the enterprise for employee satisfaction measurement and management

Extended Description:

Not used for this process element.

Facilitate Remuneration Policies & Levels

Process Identifier: 1.7.7.1.9

Hierarchy Level: 4

Brief Description:

Support people management throughout the enterprise for remuneration policies, remuneration levels

Extended Description:

Not used for this process element.

Develop the Workforce

Process Identifier: 1.7.7.2

Hierarchy Level: 3

Brief Description:

Support the definition of the organization of the enterprise and coordinate its reorganizations.

Extended Description:

Develop the Workforce processes support the definition of the organization of the enterprise and coordinate its reorganizations. These processes can apply for the overall organization, can define the organization of single business units, or at least can ensure coherency and/or guarantee support to specific processes defining

Manage Workforce Strategy

Process Identifier: 1.7.7.3

Hierarchy Level: 3

Brief Description:

Drives overall enterprise workforce strategies, including their development and execution at the individual business unit level.

Extended Description:

Manage Workforce Strategy processes drive overall enterprise workforce strategies, including their development and execution at the individual business unit level. Manage Workforce Strategy processes include understanding the requirements of the business and defining the competencies and skills required of the human resources. The processes define the requirements for competency modeling, application of profiling, overall job design, approach to employee satisfaction, etc. These processes create the strategies needed to ensure that the correct type, quantity and quality of employees will be available in right locations for future business. These processes, working with all areas of the enterprise, determine the changes required in the enterprise workforce and the strategies required to make the necessary changes.

Define Workforce Strategy Requirements

Process Identifier: 1.7.7.3.1

Hierarchy Level: 4

Brief Description:

Understand the requirements of the business; define the requirements for competency modeling, application of profiling, overall job design, approach to employee satisfaction, etc.

Extended Description:

Not used for this process element.

Create Workforce Strategy

Process Identifier: 1.7.7.3.2

Hierarchy Level: 4

Brief Description:

Define workforce competency requirements and create strategies to provide the required people in the right locations.

Extended Description:

Define the competencies and skills required of the human resources; create the strategies needed to ensure that the correct type, quantity and quality of employees will be available in right locations for future business. and define the competencies and skills required of the human resources

Manage Workforce Change

Process Identifier: 1.7.7.3.3

Hierarchy Level: 4

Brief Description:

Determine the changes required in the enterprise's workforce and the strategies required to make the necessary changes, working with all areas of the enterprise

Extended Description:

Not used for this process element.

Train the Workforce

Process Identifier: 1.7.7.4

Hierarchy Level: 3

Brief Description:

Develop employees to meet the needs of the business.

Extended Description:

Train the Workforce processes focus on development of employees to meet the needs of the business. These processes include competency modeling, skills assessment, job and employee strength profiling, succession planning, training development and delivery, career development, work design, employee recruitment, etc. These processes support both the overall enterprise and the needs of individual business units or functions.

Apply Competency Modeling

Process Identifier: 1.7.7.4.1

Hierarchy Level: 4

Brief Description:

Facilitate development of employees to meet the needs of the business through competency modeling. These processes support both the overall enterprise and the needs of individual business units or functions.

Extended Description:

Not used for this process element.

Apply Skills Assessment

Process Identifier: 1.7.7.4.2

Hierarchy Level: 4

Brief Description:

Facilitate development of employees to meet the needs of the business through skills assessment. These processes support both the overall enterprise and the needs of individual business units or functions.

Extended Description:

Not used for this process element.

Apply Strength Profiling

Process Identifier: 1.7.7.4.3

Hierarchy Level: 4

Brief Description:

Development of employees to meet the needs of the business through job and employee strength profiling. These processes support both the overall enterprise and the needs of individual business units or functions.

Extended Description:

Not used for this process element.

Apply Succession Planning

Process Identifier: 1.7.7.4.4

Hierarchy Level: 4

Brief Description:

Facilitate development of employees to meet the needs of the business through succession planning. These processes support both the overall enterprise and the needs of individual business units or functions.

Extended Description:

Not used for this process element.

Apply Training

Process Identifier: 1.7.7.4.5

Hierarchy Level: 4

Brief Description:

Facilitate development of employees to meet the needs of the business through training development and delivery. These processes support both the overall enterprise and the needs of individual business units or functions.

Extended Description:

Not used for this process element.

Apply Career Development

Process Identifier: 1.7.7.4.6

Hierarchy Level: 4

Brief Description:

Facilitate development of employees to meet the needs of the business through career development. These processes support both the overall enterprise and the needs of individual business units or functions.

Extended Description:

Not used for this process element.

Apply Work Design

Process Identifier: 1.7.7.4.7

Hierarchy Level: 4

Brief Description:

Facilitate development of employees to meet the needs of the business through work design. These processes support both the overall enterprise and the needs of individual business units or functions.

Extended Description:

Not used for this process element.

Apply Employee Recruitment

Process Identifier: 1.7.7.4.8

Hierarchy Level: 4

Brief Description:

Facilitate development of employees to meet the needs of the business through employee recruitment. These processes support both the overall enterprise and the needs of individual business units or functions.

Extended Description:

Not used for this process element.

Manage Employee & Labor Relations

Process Identifier: 1.7.7.5

Hierarchy Level: 3

Brief Description:

Manage relationships with employees at an enterprise and employee group level.

Extended Description:

Manage Employee & Labor Relations processes focus on relationships with employees at an enterprise and employee group level. Labor Relations processes include definition of terms of employment, labor contracts development, union contract negotiations, arbitration management, etc. Employee Relations processes cover a variety of processes, e.g., counseling programs, interface to employee groups, employee involvement in the community and charities in the name of the company, etc.

Manage Employee Relations

Process Identifier: 1.7.7.5.1

Hierarchy Level: 4

Brief Description:

Manage enterprise-level relationships with employees and employee groups.

Extended Description:

Employee Relations processes cover a variety of processes, e.g., counseling programs, interface to employee groups, employee involvement in the community and charities in the name of the company, etc. Employee Relations processes focus on relationships with employees at an enterprise and employee group level

Manage Labor Relations

Process Identifier: 1.7.7.5.2

Hierarchy Level: 4

Brief Description:

Manage labor relations activities, including employment terms, labor contracts, and union negotiations.

Extended Description:

Labor Relations processes include definition of terms of employment, labor contracts development, union contract negotiations, arbitration management, etc. Labor Relations processes focus on relationships with employees at an enterprise and employee group level

Report Workforce

Process Identifier: 1.7.7.6

Hierarchy Level: 3

Brief Description:

This process is responsible for monitoring the use of the workforce, their KPIs, etc.

Extended Description:

Report Workforce process is responsible for preparing the statistical data on quality, productivity, and efficiency for the services performed by the involved employees and/or third parties. These processes record, analyze, and assess the workforce in order to provide specialized summaries of the efficiency and effectiveness of the overall Workforce processes. These specialized summaries can be specific reports required by specific audiences, as well as reporting on associated costs of the Manage Workforce processes.

Business Assurance Framework Management

Process Identifier: 1.7.9

Hierarchy Level: 2

Brief Description:

Establish an enterprise-wide business assurance policy framework and associated operational capabilities that integrates assurance and specific risk disciplines, into a data-centric, pro-active assurance umbrella framework with the goal to continuously protect and improve financial integrity, enhance business value and customer experience.

Extended Description:

The objective of the Business Assurance Framework Management processes is to establish an enterprise-wide business assurance policy framework and associated operational capabilities that integrates assurance and specific risk disciplines, into a data-centric, pro-active assurance umbrella framework with the goal to continuously protect and improve financial integrity, enhance business value and customer experience.

Business Assurance is a second level of defense (quality monitoring) across all value chains in the organization which have financial or customer impact and it can be interpreted as set of measures overtaken by an organization to assure that the processes and data flow are running as designed and to prevent any financial or reputational damage by not fulfilling the business, regulatory, legal, compliance and customer expectations. Furthermore, advanced Business Assurance processes focus on new opportunities to boost overall business performance. Business Assurance process helps ensure that the company delivers working services, compliant and efficient processes, and secure information throughout customer and product life cycles. Business Assurance process in

transformation and change () provides the company with intelligence on change/ risk impact, end-to-end process transparency, risk ownership and establishes assurance methodologies and controls. Business Assurance also integrates risk techniques across diverse business models, ecosystems and value chains. Business Assurance is cross-functional and typically composed of active risk processes such as Revenue and Cost Assurance , Fraud Management , Margin Assurance , Asset Assurance , Migration Assurance , Digital Transformation Assurance , Ecosystem Assurance , Regulatory Assurance and Customer Experience Assurance .

This process was renamed in 24.0 old process name was Business Assurance Establishment

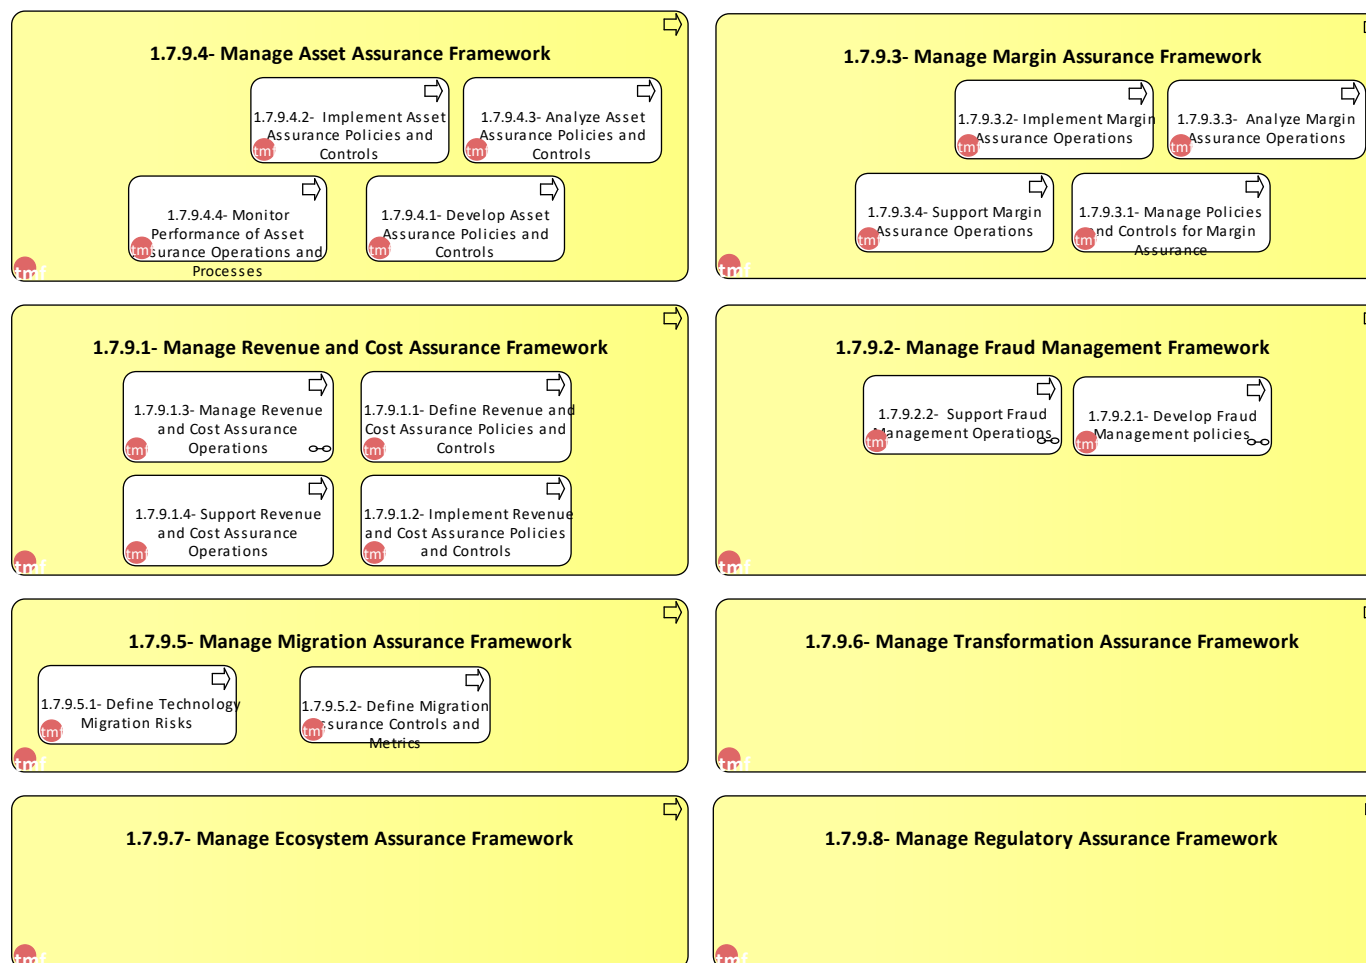

Figure 12: Business Assurance Framework Management Children

Manage Revenue and Cost Assurance Framework

Process Identifier: 1.7.9.1

Hierarchy Level: 3

Brief Description:

Establish an enterprise-wide revenue and cost assurance policy framework, and an associated operational capability aimed at minimizing revenue and cost leakage within the enterprise, without influencing demand.

Extended Description:

The objective of the Manage Revenue Assurance Framework processes is to establish an enterprise-wide revenue and cost assurance policy framework, and an associated operational capability to resolve any detected revenue and cost assurance degradations and violations. Revenue and Cost Assurance processes identify areas of revenue and cost leakage risk within the enterprise, and monitor industry trends and best practice approaches to ensure that the enterprise remains at the forefront of revenue leakage minimization and cost efficiency maximization. These processes support the categorization and prioritization of areas of revenue leakage and excessive costs risk. To achieve this, these processes define the policies, guidelines, practices and procedures to be followed and provide assistance to the enterprise operational areas to deploy appropriate procedures and monitoring capabilities.

Revenue and Cost Assurance processes deal with the establishment of tools and data collection capabilities to capture details of operation activity, analysis of monitored activity to detect and correct actual revenue leakage or excessive costs. These processes work in conjunction with operational and other process elements to guide them in supporting the specific needs of Revenue and Cost Assurance. Where appropriate, Revenue and Cost Assurance processes supplement the capabilities of these other process elements, to control and analyze the enterprise behavior relevant to Revenue and Cost Assurance needs.

The responsibilities of these processes include, but are not limited to:

- Establishing and managing a revenue assurance policy framework, including identification of controls and measures
- Implementing identified controls and measures, setting up the Data collection capabilities and tools needed to support operational processes
- Establishing and managing an operational process capability able to detect and resolve revenue and cost assurance degradations and violations

- Establishing and managing a capacity to regularly review the revenue assurance policy framework to ensure it meets the enterprise's changing objectives

The objectives of Revenue Assurance, mainly towards the end-customer, are to be enriched with the scope of Cost Assurance:

- to ensure that all the utilization/ consumption/ subscription to third parties' services/resources are fully and correctly captured, and timely processed
- to ensure that all the payments and settlements to third parties are calculated correctly according to contracts and agreements and according to the real utilization of the third parties' resources

This process was renamed in 24.0 old process name was Revenue and Cost Assurance

Define Revenue and Cost Assurance Policies and Controls

Process Identifier: 1.7.9.1.1

Hierarchy Level: 4

Brief Description:

Establish and manage a framework of policies and measurable controls that are used to manage the risk associated with revenue and cost assurance

Extended Description:

The objective of this process is to Define Revenue and Cost Assurance Policies and Controls process and to establish and manage a framework of policies and measurable controls that are used to manage the risk associated with revenue and cost assurance, and to optimize the enterprise's appetite for revenue and cost assurance risk.

These processes are responsible for, but not limited to:

- Establishing and managing a revenue and cost assurance policy framework which is aligned with the overall enterprise goals and objectives
- Developing a framework of controls and KPIs which achieves the defined revenue and cost assurance goals and objectives
- Gaining enterprise-wide commitment to and knowledge of the framework
- Regularly reviewing the revenue and cost assurance framework to ensure that its outcomes remain aligned with the enterprise's objectives

The Define Revenue and Cost Assurance Policies and Controls has a specific responsibility in developing and defining controls and Key Performance Indicators (KPIs) used for RA,

in conjunction with operational and other processes elsewhere in the enterprise.

Where processes elsewhere in the enterprise have an intrinsic capability to instrument their own performance and behavior (as an aspect of operating effectively within the business),

the Manage Revenue and Cost Assurance Framework process makes use of this capability, but can also provide guidance to these processes in the form of modified, or additional, KPIs,

required to support the overall role of Revenue and Cost Assurance . This can involve individual process elements throughout the enterprise (as appropriate for the various aspects of Revenue and Cost Assurance that apply), or may involve co-ordination across a number of process elements where Revenue and Cost Assurance acts to provide an integrated or coordinated view of the overall situation.

With regard to KPI definition, the Manage Revenue and Cost Assurance Framework process establishes the objectives used to identify the minimum level of satisfactory performance required for a given control point or a process from an RA perspective, and works with other process element in the enterprise to effect this.

With regard to development of Revenue and Cost Assurance controls, the Manage Revenue and Cost Assurance Framework process applies policy-based rules that represent the logical definition of comparisons performed on entities, such as bills and call detail records.

These are used together with Revenue and Cost Assurance KPIs, to identify discrepancies from an RA perspective.

This process was renamed in 24.0 old process name was Manage Revenue and Cost Assurance Policy Framework

Implement Revenue and Cost Assurance Policies and Controls

Process Identifier: 1.7.9.1.2

Hierarchy Level: 4

Brief Description:

This process is aimed to technically set up the controls and measures by using dedicated tools and continuously develop and improve solutions needed to realize the defined framework including its policies and measurable controls driven by a risk-centric development approach, supported by the incorporation of digitization evolutions in the RA environment.

Extended Description:

While the Manage Revenue and Cost Assurance Policy Frameworks Process ensures what activities and measures shall be applied and how and the Manage Revenue and Cost Assurance Operations Process tracks their outcome, the objective of the Implement Revenue Policies Processes are the detailed implementation steps of the defined KPIs, according to their respective and before-hand evaluated priority, in the manner stated by the RA policy framework, within the technical RA solution tool, considering the evolution of the environment which's probable leak shall sought to be covered.

The process objective is to perform a conception of how to implement a control to meet the requested objectives used to identify the minimum level of satisfactory performance required for a given control point or a process from an RA perspective.

It's aim is to analyze the business process of a given control point, set up and perform an ETL process and develop a Revenue and Cost Assurance Artifact and configure its alarming, most preferably by delivering automated results.

The responsibilities of the processes include, but are not limited to:

- Conception of Business Assurance artifacts like KPIs, controls and metrics
- Ad hoc analysis and results of low level investigations driven by request of stakeholders, triggered alarms or expert judgement
- End-to-end implementation of artifacts, starting with ETL procedure of source data and configuration in mid-layer systems to enable monitoring
- Testing and fine-tuning of the artifacts
- Implemented artifacts (control, metric)
- Documentation (control / metric attributes, dataflow)
- Updated repositories

This process was renamed in 24.0 Old process name was Implement Revenue and Cost Assurance Operations

Manage Revenue and Cost Assurance Operations

Process Identifier: 1.7.9.1.3

Hierarchy Level: 4

Brief Description:

Measure the actual revenue and cost assurance performance at defined control points against the expected performance, report anomalies and manage resolution

Extended Description:

This process measures the actual revenue and cost assurance performance at defined control points against the expected performance, report anomalies and manage resolution.

Manage Revenue and Cost Assurance Operations processes encompass managing, tracking, monitoring, analyzing, controlling and reporting on revenue and cost assurance performance as determined by assessing defined KPIs measured against revenue and cost assurance control points.

If the analysis identifies that a revenue and cost assurance KPI violation has occurred, this causes a Revenue and Cost Assurance violation to be raised, that may in turn raise a Revenue and Cost Assurance Trouble Report. Following on from this, processes are put in place to manage the resolution of the performance violation. The Manage Revenue and Cost Assurance Operations processes will continue to track the revenue and cost assurance trouble report, ensuring that performance is restored to a level required as defined by the acceptable range for the KPIs.

This process was renamed in 24.0. Old process name was Manage Revenue and Cost Assurance Operations and then back to Manage Revenue and Cost Assurance Operations in 25.0

Support Revenue and Cost Assurance Operations

Process Identifier: 1.7.9.1.4

Hierarchy Level: 4

Brief Description:

Support the Manage Revenue and Cost Assurance Operations processes by managing requirements for infrastructure to support the operational processes, and monitoring, managing and reporting on the capability of the Manage Revenue and Cost Assurance Operation

Extended Description:

The objectives of the Support Revenue and Cost Assurance Operations processes are twofold:

- support the Manage Revenue and Cost Assurance Operations processes by managing requirements for infrastructure to support the operational processes, and
- monitoring, managing and reporting on the capability of the Manage Revenue and Cost Assurance Operations processes

The responsibilities of the processes include, but are not limited to:

- Developing and maintaining a repository of revenue and cost assurance KPIs to support the Manage Revenue and Cost Assurance Operations processes
- Monitoring and analyzing the report produced by Operations processes to identify potential revenue and cost assurance problems that may be arising across operational processes as a whole
- Establishing and managing revenue and cost assurance data collection schedules, including managing the collection of the necessary information from the Resource Data Collection & Distribution processes, to support proactive monitoring and analysis activity, and requests from

Manage Revenue and Cost Assurance Operations processes Implement Revenue and Cost Assurance Operations processes for additional data to support revenue and cost assurance performance analysis

- Monitoring of the Manage Revenue and Cost Assurance Operations processes and associated costs (including to where the processes extend to infrastructure, deployed and managed by third parties), and reporting on the capability of the Manage Revenue and Cost Assurance Operations processes
- Establishing and managing resource performance notification facilities and lists to support the Manage Revenue and Cost Assurance Operations notification and reporting processes and the Implement Revenue and Cost Assurance Operations processes
- Creating, deploying, modifying and/or upgrading of revenue and cost assurance infrastructure deployment support tools and processes for new and/or modified revenue and cost assurance infrastructure
- Authoring, reviewing and approving operational procedures developed by Resource Development & processes prior to resource infrastructure deployment

- Testing and acceptance of new and/or modified revenue and cost assurance infrastructure support tools as part of the handover procedure from the Resource Development & processes
- Detecting revenue and cost assurance infrastructure operational limitations and/or deployment incompatibilities and providing requirements to address these aspects to Resource Development & processes

Manage Fraud Management Framework

Process Identifier: 1.7.9.2

Hierarchy Level: 3

Brief Description:

Establish an enterprise-wide fraud policy framework, and an associated operational capability aimed at identifying and preventing internal and external fraud in an organization.

Extended Description:

Manage a Fraud Management Framework process ensure real-time screening of transaction activity across users, accounts, processes and channels, to identify and prevent internal and external fraud in an organization. The objective of the Fraud in general is to detect fraud risks, activities, and other violations, as well as to detect and prevent the re-surfacing of known fraudulent activities, individuals, and syndicates.

Fraud is chartered within an operator to conduct 2 primary functions within the operator's business model: Create and maintain a fraud policy (enabling methods, activities, and other procedures to detect, prevent, and manage discovered fraud instances within the operator), and support of fraud operations (creation and of rules, lists, tools/solutions used for detections, staff education, etc.).

The objective of the Fraud in general is to detect fraud risks, activities, and other violations, as well as to detect and prevent the re-surfacing of known fraudulent activities, individuals, and syndicates. Proactive detection processes are preferable to reactive mitigation and of existing fraud, hence the importance of policy

and support functions to provide tools to operational components in the enterprise to prevent fraud before it becomes harmful to the business. Inevitably, reactive processes must also be supported, as fraud tactics are in a continual state of change, posing a constant threat to operators.

This process was renamed in 24.0 Old process name Fraud Management

Develop Fraud Management policies

Process Identifier: 1.7.9.2.1

Hierarchy Level: 4

Brief Description:

Establish and manage all intra-team, enterprise-wide, and external facing policies to facilitate detection, management, and prevention of fraudulent activities

Extended Description:

The objective of Develop Fraud Management policies process is to manage and maintain all policies necessary for successful fraud program operations within a carrier. Depending on the product offerings, geographic region served, demographics of the subscriber base, partner (e.g., wholesale) environment, internal network structure, budget, and other factors, fraud policies will vary across operators, with unique requirements for fraud policies prevalent in each case. Practices and processes for detection, investigation, ongoing education, tool uses, feedback of identified frauds, external interactions (partners, LEAs), etc. comprise areas within scope of Fraud Policy .

This process was renamed in 24.0 Old process name Fraud Policy Management

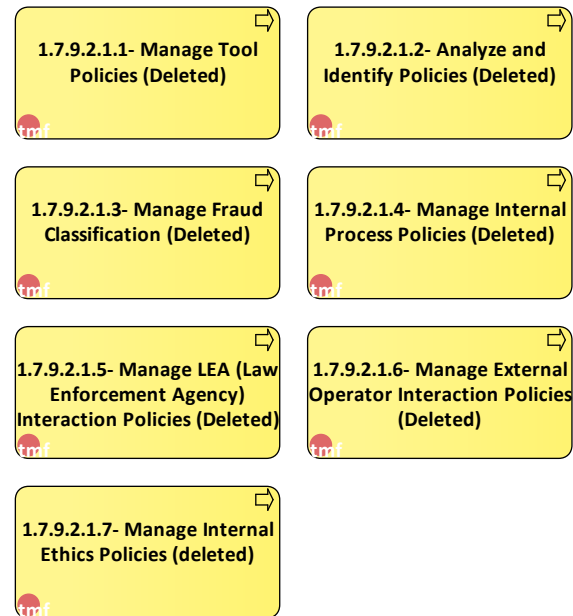

Figure 13: Fraud Policy Management Children

Support Fraud Management Operations

Process Identifier: 1.7.9.2.2

Hierarchy Level: 4

Brief Description:

Fraud Operations Support serves as the enabling function for fraud prevention, ongoing fraud detection, and overall threat reduction practices.

Extended Description:

Support Fraud Management Operations has a primary role as a preventative entity within Fraud Operations overall. The Support process objective is to enable the ongoing detection, investigation and actions functions of Fraud Operations but also to support, in a proactive manner, the threats identification and Fraud avoidance functions through preventative information collection, monitoring the business for changes (and counsel the business when those changes expose a threat for fraud) and to manage fraud leanings back into the business via list , rule enhancements, etc.

This process was renamed in 24.0 Old process name was Fraud Operations Support

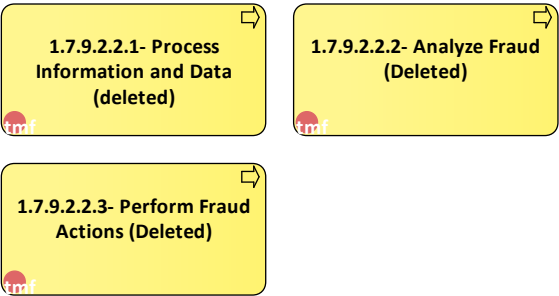

Figure 14: Fraud Operations Support Children

Manage Margin Assurance Framework

Process Identifier: 1.7.9.3

Hierarchy Level: 3

Brief Description:

Establish an enterprise-wide Margin assurance policy framework and operational capabilities to monitor direct and indirect costs of the related revenues and ensure the detection of deliberate or involuntary financial leakages leading to negative or low margin customers, partners, channels, etc.

Extended Description:

Manage a Margin Assurance Framework process helps the stakeholders in the company to gain a competitive advantage by obtaining valuable insights about their operations and customers, allowing them to transform from a business focused on average revenue per user (ARPU) to one based on average margin per user (AMPU).

The objectives of Margin Assurance process are:

- Identification of the margin related risks and creating a framework including controls, mitigation measures and KPIs
- Assurance of visibility and correct identification of the real margins associated with different products, services, bundles, customer segments, customers, subscribers, and partners through regular monitoring of respective data sources
- Ensuring a correct and timely calculation of all the margins associated with products, services, bundles, customer segments, customers, subscribers, and partners
- Assurance of the profitability of the customers/tariffs , verifying that negative or low margins on customers/tariffs are not caused by wrong product definition, network problems or high usage
- Assurance that the margins are aligned with the revenues and the costs associated with the products, services, bundles, customer segments, customers, subscribers, and partners.

This process was renamed in 24.0 Old process name was Margin Assurance

Manage Policies and Controls for Margin Assurance

Process Identifier: 1.7.9.3.1

Hierarchy Level: 4

Brief Description:

Establish and manage a framework of policies and measurable controls that are used to manage the risk associated with margin assurance.

Extended Description:

The objective of the Manage Policies and Controls for Margin Assurance process is to establish and manage a framework of policies and measurable controls that are used to manage the risk associated with margin assurance, and to optimize the enterprise's appetite for margin related risks.

These processes are responsible for, but not limited to:

- Establishing and managing a margin assurance policy framework which is aligned with the overall enterprise goals and objectives
- Developing a framework of controls and KPIs which achieves the defined margin assurance goals and objectives
- Gaining enterprise-wide commitment to and knowledge of the framework
- Regularly reviewing the margin assurance framework to ensure that its outcomes remain aligned with the enterprise's objectives

The Manage Margin Assurance Framework process has a specific responsibility in developing and defining controls and Key Performance Indicators (KPIs) used for MA, in conjunction with operational and other processes elsewhere in the enterprise.

This process was renamed in 24.0 Old process name was Manage Margin Assurance Policy Framework

Implement Margin Assurance Operations

Process Identifier: 1.7.9.3.2

Hierarchy Level: 4

Brief Description:

Establish and implement an operational process capability able to detect negative or low margin customers, unprofitable- tariffs, subscribers, partners, transit services and unprofitable marketing campaigns.

Extended Description:

The objective of the Implement Margin Assurance Operations is to perform a conception of how to implement the controls identified within the Manage Margin Assurance Policy Framework, to meet the requested objectives used to identify the minimum level of satisfactory performance required for a given control point or a process.

It's aim is to analyze the business process of a given control point, identify the data sources and their formats, set up and perform an ETL process and develop a Margin Assurance Artifact and configure its alarming, most preferably by delivering automated results.

The responsibilities of the processes include, but are not limited to:

- Conception of Margins Assurance artifacts like KPIs, controls and metrics
- Ad hoc analysis and results of low level investigations driven by request of stakeholders, triggered alarms or expert judgement
- End-to-end implementation of artifacts, starting with ETL procedure of source data and configuration in mid-layer systems to enable monitoring

- Testing and fine-tuning of the artifacts
- Implemented artifacts (control, metric)
- Documentation (control / metric attributes, dataflow)
- Updated repositories

Analyze Margin Assurance Operations

Process Identifier: 1.7.9.3.3

Hierarchy Level: 4

Brief Description:

Measure the actual margin assurance performance at defined control points against the expected performance, report anomalies and manage resolution.

Extended Description:

The Analyze Margin Assurance Operations processes should deliver detailed information on service provider margins and profits, delivered through a comprehensive analysis of the full value-chain. The Margin Assurance Operations process responsibilities lies in the detection and investigation of outliers in margins over time and includes monitoring of commissions, sales fees and other direct and indirect costs, such as 3rd Party and Content Commissions, Interconnection, Roaming and Mobile Financial Services as well as detection of deliberate or involuntary financial leakages and goodwill credit notes together with promotions and discounts which lead to negative or low margin customers, unprofitable tariffs, unprofitable subscribers, unprofitable partners, unprofitable transit services and unprofitable marketing campaigns. The operational capabilities should support analysis and creating of cases based on identified underperformance, monitoring and tracking the open cases, quantification and reporting.

This process was renamed in 24.0 Old process name was Manage Margin Assurance Operations

Support Margin Assurance Operations

Process Identifier: 1.7.9.3.4

Hierarchy Level: 4

Brief Description:

Support the Manage Margin Assurance Operations processes by managing requirements for infrastructure to support the operational processes, and monitoring, managing and reporting on the capability of the Manage Margin Assurance Operations processes.

Extended Description:

The objectives of the Support Margin Assurance Operations processes are twofold:

- support the Manage Margin Assurance Operations processes by managing requirements for infrastructure to support the operational processes, and
- monitoring, managing and reporting on the capability of the Manage Margin Assurance Operations processes

The responsibilities of the processes include, but are not limited to:

- Developing and maintaining a repository of margin assurance KPIs to support the Manage Margin Operations processes
- Monitoring and analyzing the report produced by Operations processes to identify potential margin assurance problems that may be arising across operational processes as a whole

- Establishing and managing margin assurance data collection schedules, including managing the collection of the necessary information from the Resource Data Collection & Distribution processes, to support proactive monitoring and analysis activity, and requests from Manage Margin Assurance Operations processes
- Implement Margin Assurance Operations processes for additional data to support revenue and cost assurance performance analysis
- Monitoring of the Manage Margin Assurance Operations processes and associated costs (including to where the processes extend to infrastructure, deployed and managed by third parties), and reporting on the capability of the Manage Margin Assurance Operations processes
- Establishing and managing resource performance notification facilities and lists to support the Manage Margin Assurance Operations notification and reporting processes and the Implement Margin Assurance Operations processes
- Creating, deploying, modifying and/or upgrading of margin assurance infrastructure deployment support tools and processes for new and/or modified revenue and cost assurance infrastructure
- Authoring, reviewing and approving operational procedures developed by Resource Development & processes prior to resource infrastructure deployment
- Testing and acceptance of new and/or modified margin assurance infrastructure support tools as part of the handover procedure from the Resource Development & processes
- Detecting margin assurance infrastructure operational limitations and/or deployment incompatibilities and providing requirements to address these aspects to Resource Development & processes

Manage Asset Assurance Framework

Process Identifier: 1.7.9.4

Hierarchy Level: 3

Brief Description:

Establish an enterprise-wide Asset Assurance policy framework, and an associated operational capability aimed at assuring that all assets (logical and physical) in the enterprise are properly leveraged, specifically in terms of performance, lifecycle, qua

Extended Description:

Manage an Asset Assurance Framework process establishes the framework and operational systems necessary to ensure that all physical and logical resources in the enterprise are properly leveraged, specifically in terms of performance, lifecycle, quality, regulation and investments. Asset Assurance provides a framework to establish processes and data flows to enable DSPs to manage network assets across all dimensions of the asset life cycle to reduce stranded and underutilized assets. Asset Assurance operational capability establishes the processes for continual monitoring and controls at each phase of the asset lifecycle to provide the stakeholders with a holistic, network wide view of all network assets from procurement through disposition, including all asset states (spare parts, on-air, project reserved, etc.). Asset Assurance provides the enterprise insights and processes to optimize the network performance and capacity including the establishment of tools and data collection capabilities to capture details of operational activity supporting the discovery, recapture, and redeployment of stranded or underutilized assets. These processes work in conjunction with operational and other process elements to guide DSPs in supporting the specific needs of Asset Assurance. Where appropriate, Asset Assurance processes supplement the capabilities of these other process elements, to control and analyze the enterprise behavior relevant to Asset Assurance needs.

The responsibilities of these processes include, but are not limited to:

- Establishing an asset assurance policy framework, including the identification of controls and measures
- Establishing and managing an operational process capability able to detect and resolve asset inefficiencies, stranded assets, over/under supply, or incorrect inventory information.
- Establishing and managing a capacity to regularly review the asset assurance policy framework to ensure it meets the enterprise's changing objectives.

This process was renamed in 24.0 Old process name was Asset Assurance

Develop Asset Assurance Policies and Controls

Process Identifier: 1.7.9.4.1

Hierarchy Level: 4

Brief Description:

Establish a framework of policies and measurable controls that are used to manage the risks associated with asset assurance.

Extended Description:

The objective of the Develop Asset Assurance Policies & Controls process is to establish and manage a framework of policies and measurable controls that are used to manage the risk associated with asset assurance, and to optimize the enterprise's appetite for asset related risks. Asset Assurance provides a framework to establish processes and data flows to enable DSPs to manage network assets across all dimensions of the asset life cycle to reduce stranded and underutilized assets.

These processes are responsible for, but not limited to:

- Establishing and managing an asset assurance policy framework which is aligned with the overall enterprise goals and objectives
- Developing a framework of controls and KPIs which achieves the defined asset assurance goals and objectives
- Gaining enterprise-wide commitment to and knowledge of the framework
- Regularly reviewing the asset assurance framework to ensure that its outcomes remain aligned with the enterprise's objectives

The Manage Asset Assurance Framework process has a specific responsibility in developing and defining controls and Key Performance Indicators (KPIs) used for Asset Assurance, in conjunction with operational and other processes elsewhere in the enterprise.

Manage Asset Assurance Policy Framework

Implement Asset Assurance Policies and Controls

Process Identifier: 1.7.9.4.2

Hierarchy Level: 4

Brief Description:

Implement an operational process capabilities to detect and resolve asset inefficiencies, stranded assets, over/under supply or incorrect inventory information.

Extended Description:

The objective of the Implement Asset Assurance Policies & Controls process is to perform a conception of how to implement the controls identified within the Manage Asset Assurance Policy Framework, to meet the requested objectives used to identify the minimum level of satisfactory performance required for a given control point or a process.

It's aim is to analyze the business process of a given control point, identify the data sources and their formats, set up and perform an ETL process and develop an Asset Assurance Artifact and configure its alarming, most preferably by delivering automated results.

The responsibilities of the processes include, but are not limited to:

- Conception of Asset Assurance artifacts like KPIs, controls and metrics
- Ad hoc analysis and results of low level investigations driven by request of stakeholders, triggered alarms or expert judgement
- End-to-end implementation of artifacts, starting with ETL procedure of source data and configuration in mid-layer systems to enable monitoring
- Testing and fine-tuning of the artifacts

- Implemented artifacts (control, metric)
- Documentation (control / metric attributes, dataflow)
- Updated repositories

This process was renamed in 24.0 Old process name was Implement Asset Assurance Operations

Analyze Asset Assurance Policies and Controls

Process Identifier: 1.7.9.4.3

Hierarchy Level: 4

Brief Description:

Analyze controls and network insights related to the actual asset assurance performance at defined control points against the expected performance, report anomalies and manage resolution.

Extended Description:

The Analyze Asset Assurance Policies & Controls processes should deliver continual monitoring and controls at each phase of the asset lifecycle to provide the stakeholders with a holistic, network wide view of all network assets from procurement through disposition, including all asset states (spare parts, on-air, project reserved, etc.). Asset Assurance provides the enterprise insights and processes to optimize the network performance and capacity including the establishment of tools and data collection capabilities to capture details of operational activity supporting the discovery, recapture, and redeployment of stranded or underutilized assets. The operational capabilities should support analysis and creating of cases based on identified under performance, monitoring and tracking the open cases, quantification and reporting.

This process was renamed in 24.0 Old process name was Manage Asset Assurance Operations

Monitor Performance of Asset Assurance Operations and Processes

Process Identifier: 1.7.9.4.4

Hierarchy Level: 4

Brief Description:

Support the Asset Assurance Operations processes by reviewing requirements for infrastructure to support the operational processes, and monitoring, and reporting on the capability of the Asset Assurance Operations processes.

Extended Description:

The objectives of the Monitor Performance of Asset Assurance Operations processes are twofold:

- support the Manage Margin Assurance Operations processes by managing requirements for infrastructure to support the operational processes, and
- monitoring, managing and reporting on the capability of the Manage Margin Assurance Operations processes

This process was renamed in 24.0 Old process name was Support Asset Assurance Operations

Manage Migration Assurance Framework

Process Identifier: 1.7.9.5

Hierarchy Level: 3

Brief Description:

Establish an enterprise-wide Migration Assurance Policy Framework ensuring completeness, correctness, data dependencies and timeliness of the migration of services and/or customers to new systems or platforms to proactively address financial errors or negative customer experience.

Extended Description:

Manage Migration Assurance Framework process aims to safeguard that during the migration of services and/ or customers from legacy to new systems/platforms/ processes (e.g. billing migration, CRM migration, network migration) all customers, products, offers and account balances as well as the historical data, are migrated accurately to avoid any need of manual billing interventions.

The objective of the Migration Assurance is to assure that:

- Data cleaning is performed before the migration to new/modified systems/platforms
- Legacy customizations for business scenarios are correctly mapped in COTS platforms
- Business Assurance test scenarios are defined and executed before the production
- Post migration Business Assurance test scenarios between old and new environments data defined and executed after production
- Historical data accessibility is implemented before the production
- Guarantee that data access policies remain according with the defined policies, when making it accessible to the right stakeholders in the new repositories
- Assure that all structured relationships and incurring operations between existing and newly deployed platforms are performing as initially designed to support the process dependency (ex: mediation migration to deliver data to billing)

- Migrated data interpretation support implemented before production
- Users and customers (self-service) training on new migrated data interpretation implemented before production
- Users don't experience outages or delays in receiving their provisioned services
- Service delivery interruptions due to errors during platform service and customer migration, are minimized

This process was renamed in 24.0 Old process name Migration Assurance

Define Technology Migration Risks

Process Identifier: 1.7.9.5.1

Hierarchy Level: 4

Brief Description:

This process aims to define potential risks associated with the revenue leakage and customer experience of provisioning and billing errors before, during the testing and after the technology migration. The aim is to ensure service continuity and the customer experience for Communication Services Provider (CSPs) customers during multi-technology migration processes.

Extended Description:

Define Technology Migration Risks- As part of the implementation of Migration Assurance Processes a set of KPIs are defined based on potential risks associated with the revenue leakage and customer experience of provisioning and billing errors before, during the testing and after the technology migration.

The revenue assurance tool should be able to use automated control-monitoring mechanisms to ensure that the KPIs meet the defined objectives as well as whenever deviations are detected; the cases are escalated for an immediate resolution to achieve operational control objectives.

The responsibilities of the processes include, but are not limited to:

- Definition of the key risks associated with technology migration from the revenue and customer experience perspective
- Definition of the Business Assurance automated auditing indicators by defining KPIs, controls, and metrics to feed into the Business Assurance tools
- Define the data sources and the data integration procedures in the business assurance tool to monitor risks, if possible in real-time, to feed business assurance KPIs
- Definition of segregation of duties and responsibilities for case escalation and resolution
- Allow the ad hoc analysis of low-level investigations driven by request of stakeholders based on triggered alarms and developed by expert judgment outside of the designed KPIs
- Testing and fine-tuning of the controls in place
- Measure and quantify the impacts of the controls in place during the detection, prevention, and recovery for business
- Implement automatic reporting capabilities for business and operational items previously mentioned
- Documentation (control / metric attributes, dataflow)
- Updated repositories

This process was renamed in 24.0 Old process name Manage Migration Assurance Framework

Define Migration Assurance Controls and Metrics

Process Identifier: 1.7.9.5.2

Hierarchy Level: 4

Brief Description:

Define migration assurance controls, KPIs, and metrics to support an accurate and seamless transition between systems.

Extended Description:

The Define Migration Assurance Controls and Metrics establishes principles that guide the migration process and sets out controls and metrics recommendations for Communication Service Providers (CSPs) that look for a seamless transition for the technology that supports the services provided to consumers and businesses.

The primary goal the migration assurance framework is to guarantee an accurate, timely and consistent information between the legacy and the new system in place, in order to avoid revenue assurance or customer experience issues.

The responsibilities of the processes include, but are not limited to:

- ◆ Definition of the Business Assurance automated auditing indicators by defining KPIs, controls, and metrics to feed into the Business Assurance tools
- ◆ Testing and fine-tuning of the controls in place
- ◆ Measure and quantify the impacts of the controls in place during the detection, prevention, and recovery for business
- ◆ Documentation (control / metric attributes, dataflow)

Manage Transformation Assurance Framework

Process Identifier: 1.7.9.6

Hierarchy Level: 3

Brief Description:

Establish an enterprise-wide transformation assurance policy framework, and an associated operational capability aimed at ensuring risks along change and transformation are recognized, owned, understood and actively managed to minimize financial and customer impact during digital transformation projects.

Extended Description:

The objective of the Manage a Transformation Assurance Framework process is to establish an enterprise-wide transformation assurance policy framework, and an associated operational capability aimed at ensuring risks along change and transformation are recognized, owned, understood and actively managed to minimize financial and customer impact during transformation projects. The Transformation Assurance process focusses on providing consultancy within change processes in the enterprise and transparency on early identified risks, their assignment, assessment and defining build-in controls for enabling “error-free” transformation. For handling this role of a consultant during the transformation projects, a standard Business Assurance Change methodology can be defined that starts from project assessment to identify the risk areas and risk level, standard Business Assurance requirements for “build-in” controls, standard Business Assurance requirements for data export and proceeding to project specific requirements.

This process was renamed in 24.0 Old process name Transformation Assurance

Manage Ecosystem Assurance Framework

Process Identifier: 1.7.9.7

Hierarchy Level: 3

Brief Description:

Establish an enterprise-wide ecosystem assurance policy framework, and an associated operational capability aimed at assuring continual trust for customers and ecosystem partners through application of “assurance by design” principles ensuring that new and digital services work from day one and create value.

Extended Description:

The objective of the Manage Ecosystem Assurance Framework process is to establish an enterprise-wide ecosystem assurance policy framework, and an associated operational capability aimed at assuring continual trust for customers and ecosystem partners through application of “assurance by design” principles, ensuring that new and digital services work from day one and create value. Ecosystem Assurance process focusses on providing visibility and traceability of end-to-end digital services, across the partner ecosystem value-chain via enabling and assuring a standardized Open API connectivity, Plug & Play assurance models, multi-way anomaly detection and accurate multi-partner settlement process.

This process was renamed in 24.0 Old process name was Ecosystem Assurance

Manage Regulatory Assurance Framework

Process Identifier: 1.7.9.8

Hierarchy Level: 3

Brief Description:

Establish an enterprise-wide Regulatory Assurance policy framework to assure that regulations and respective protective measures are properly implemented and applied across all processes with Business Assurance remit.

Extended Description:

The objective of Manage Regulatory Assurance Framework process is the proper implementation of regulations across all processes with Business Assurance remit and to assure a proper implementation of protective measures according to different regulations in place, new or updated ones.

The regulatory requirements might be very different in different countries, therefore the risks and control objectives are different. Just few examples of controls to ensure the regulatory compliance:

- Metering accuracy comply with regulatory requirements
- Bill accuracy comply with regulatory requirements
- Customer complaints processed within legal frame
- Regulated prices implemented correctly
- Limit notifications sent according to regulation
- Tax compliance
- Transfer of ownership
- Traceability
- Data breach risk
- Prevention against mobile payment-related money laundering

This process also covers the most efficient exploitation of given regulation by monitoring the compliance with regards to maximum price (e.g. Charging of MVNO and interconnection), efficient cost strategies (e.g. least license costs for of allocated numbers ranges) and the enforcement as well as the correct implementation of legally granted fair use policies (e.g. Roam like Home).

This process was renamed in 24.0 Old process name was Regulatory Assurance

Supply Chain Management

Process Identifier: 1.7.10

Hierarchy Level: 2

Brief Description:

Supply Chain Management business process handles the activities that plan, source, make, deliver, return of raw and processed materials.

Extended Description:

Supply Chain Management business process handles the activities that plan, source, make, deliver, return of raw and processed materials.

For enterprises, Supply Chain Management business process and activities oversees all the processes that integrate suppliers into the enterprise in order to work efficiently together to move products from creation to the customer hands, and taking into account supply and demand.

In commerce, Supply Chain Management business process handle all the activities involved in the flow of goods and services, between enterprises, businesses and locations, and includes the movement and storage of raw materials, of work-in-process inventory, and of finished goods as well as end to end order fulfillment from point of origin to point of consumption.

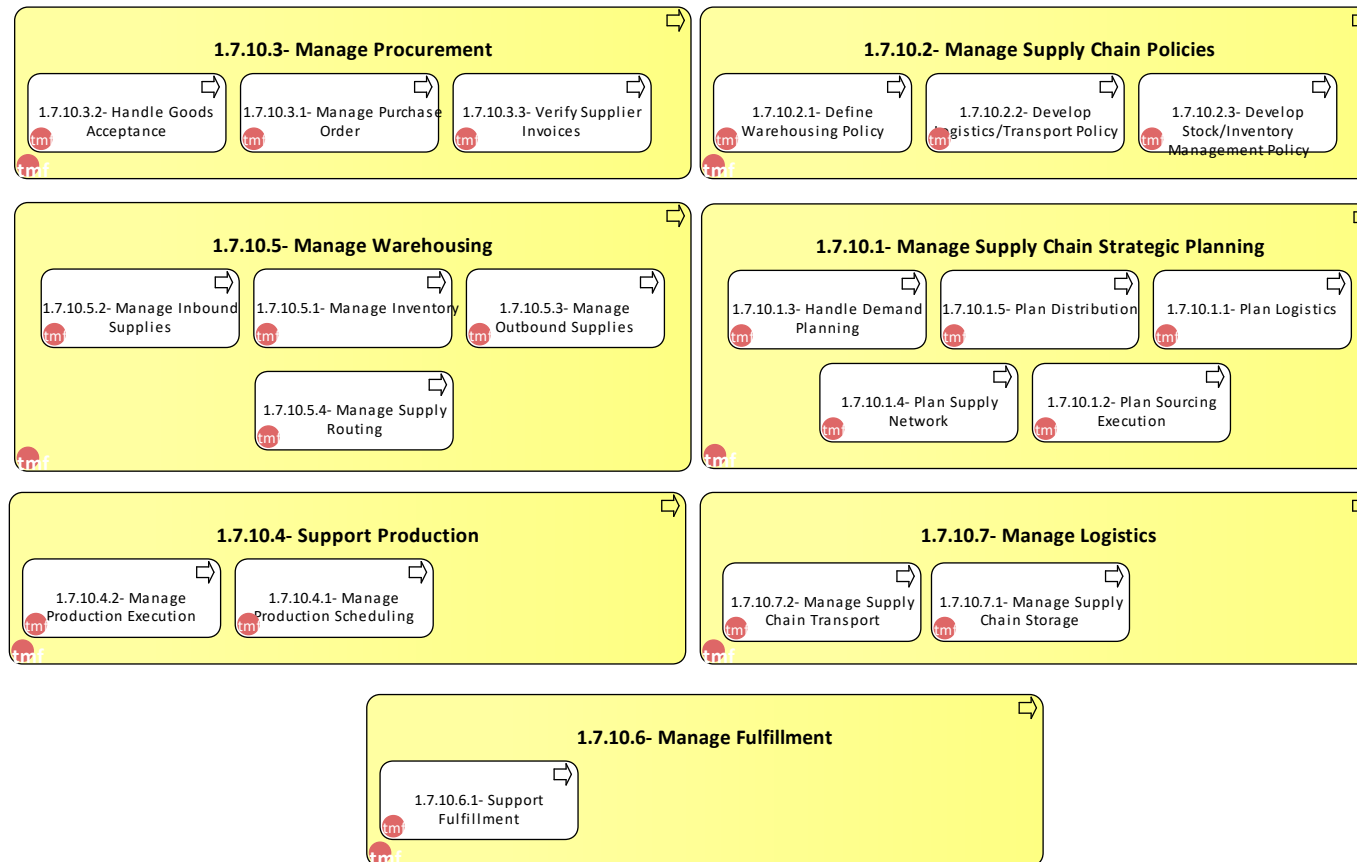

Figure 15: Supply Chain Management Children

Manage Supply Chain Strategic Planning

Process Identifier: 1.7.10.1

Hierarchy Level: 3

Brief Description:

Manage Supply Chain Strategic Planning: Manage Supply Chain Strategic Planning leverage the Enterprise strategic planning to identify demand and optimize inventory, supplier network plans, procurement sourcing plans (in-sourcing, out-sourcing), and distribution plans, etc.

Extended Description:

Manage Supply Chain Strategic Planning: Manage Supply Chain Strategic Planning leverage the Enterprise strategic planning to identify demand and optimize inventory, supplier network plans, procurement sourcing plans (in-sourcing, out-sourcing), and distribution plans, etc.

Plan Logistics

Process Identifier: 1.7.10.1.1

Hierarchy Level: 4

Brief Description:

Plan Logistics activity handles the transportation plan, storage plan to support the core (product, service, resource) processes according to the Supply Chain Strategic Management plan.

Extended Description:

Plan Logistics activity handles the transportation plan, storage plan to support the core (product, service, resource) processes according to the Supply Chain Strategic Management plan.

Plan Sourcing Execution

Process Identifier: 1.7.10.1.2

Hierarchy Level: 4

Brief Description:

Plan Sourcing business activity support procurement business activities by providing the blueprint to assess and manage changes so that the benefits of procurement strategies are realized.

Extended Description:

Plan Sourcing business activity support procurement business activities by providing the blueprint to assess and manage changes so that the benefits of procurement strategies are realized.

Sourcing plan must be created in a way that ensures the benefits identified in the strategy are delivered in full and on time.

Handle Demand Planning

Process Identifier: 1.7.10.1.3

Hierarchy Level: 4

Brief Description:

Handle Demand Planning business activity is in charge of forecasting, or predicting, the demand for "products" to ensure the enterprise they can be delivered, and that they satisfy customers.

Extended Description:

Handle Demand Planning business activity is in charge of forecasting, or predicting, the demand for "products" to ensure the enterprise they can be delivered, and that they satisfy customers.

This business activity has a goal of attaining a balance between having sufficient inventory levels to meet customer needs without having a surplus.

Plan Supply Network

Process Identifier: 1.7.10.1.4

Hierarchy Level: 4

Brief Description:

Plan Supply Network business activity is in charge of integrating purchasing, production, distribution, and transportation so that comprehensive tactical planning and sourcing decisions can be simulated and implemented on the basis of a single, global con

Extended Description:

Plan Supply Network business activity is in charge of integrating purchasing, production, distribution, and transportation so that comprehensive tactical planning and sourcing decisions can be simulated and implemented on the basis of a single, global consistent model.

Plan Supply Network business activity uses advanced optimization activities, based on constraints and penalties, to plan product flow along the supply chain in order to facilitate optimal purchasing, production, and distribution decisions; reduced order fulfillment times and inventory levels; and improved customer service.

Plan Distribution

Process Identifier: 1.7.10.1.5

Hierarchy Level: 4

Brief Description:

Pan Distribution business activity is in charge of determining the right quality of products to be availed to the enterprises distribution network in order to meet customer demand.

Extended Description:

Pan Distribution business activity is in charge of determining the right quality of products to be availed to the enterprises' distribution network in order to meet customer demand.

Plan Distribution ensures that customer and forecasted demand are translated into purchase orders. This process depends on actual demand signals such as customer orders, as those orders are used to plan the gross requirements of the supply source.

Manage Supply Chain Policies

Process Identifier: 1.7.10.2

Hierarchy Level: 3

Brief Description:

Manage Supply Chain Policies business activity manage the definition of principles of action that are adopted or proposed by the for all supply chain activities, including procurement and logistics, warehousing, transport and physical resource distribution, and supervise their application.

Extended Description:

Manage Supply Chain Policies business activity manage the definition of principles of action that are adopted or proposed by the for all supply chain activities, including procurement and logistics, warehousing, transport and physical resource distribution, and supervise their application.

Plans will capture warehousing policies, inventory/stock policies, logistics policies, production policies and fulfillment policies.

Define Warehousing Policy

Process Identifier: 1.7.10.2.1

Hierarchy Level: 4

Brief Description:

Define Warehousing Policies business activity define the warehousing structure (centralized and/or distributed) and the associated management policies to be applied to purchased goods.

Extended Description:

Define Warehousing Policies business activity define the warehousing structure (centralized and/or distributed) and the associated management policies to be applied to purchased goods.

Develop Logistics/Transport Policy

Process Identifier: 1.7.10.2.2

Hierarchy Level: 4

Brief Description:

Develop Logistics/Transport Policies business activity develop the policies for Transporting or moving supplies between locations.

Extended Description:

Develop Logistics/Transport Policies business activity develop the policies for Transporting or moving supplies between locations.

Develop Stock/Inventory Management Policy

Process Identifier: 1.7.10.2.3

Hierarchy Level: 4

Brief Description:

Develop Stock/Inventory Management Policy business activity develop the corporate policies, in conjunction with Asset Management processes which provide the inventory information resource, relating to locations of, and levels of, stock/inventory holdings.

Extended Description:

Develop Stock/Inventory Management Policy business activity develop the corporate policies, in conjunction with Asset Management processes which provide the inventory information resource, relating to locations of, and levels of, stock/inventory holdings.

Manage Procurement

Process Identifier: 1.7.10.3

Hierarchy Level: 3

Brief Description:

Manage Procurement business activity is in charge of all acquisition tasks for supplies needed by the organization (including raw materials/resources, services, finished products) for business operations.

Extended Description:

Manage Procurement business activity handle all acquisition tasks for supplies needed by the organization (including raw materials/resources, services, finished products) for business operations.

Through Manage Procurement business activities, the evaluation, selection, and creation of formal contractual agreements, as well as managing the organizations ongoing supplier relationships are done.

Manage Procurement activity interrelates with Financial Management business process when there is need to oversee transactional purchasing of supplies (goods and services), in order to complete a Source-to-Settle cycle.

Handle Goods Acceptance

Process Identifier: 1.7.10.3.2

Hierarchy Level: 4

Brief Description:

Handle Goods Acceptance business activity control the acceptance of goods from suppliers and any transport arrangements to deliver the goods to either warehouses or site.

Extended Description:

Handle Goods Acceptance business activity control the acceptance of goods from suppliers and any transport arrangements to deliver the goods to either warehouses or site.

Manage Purchase Order

Process Identifier: 1.7.10.3.1

Hierarchy Level: 4

Brief Description:

Manage Purchase Order business activity selects, creates and sends purchase orders in accordance to the mission of supply chain management.

Extended Description:

Manage Purchase Order business activity selects, creates and sends purchase orders in accordance to the mission of supply chain management.

Verify Supplier Invoices

Process Identifier: 1.7.10.3.3

Hierarchy Level: 4

Brief Description:

Verify Supplier Invoices business activity check supplier invoice accuracy, invoice information and confirms delivery of supplies according to the purchase order.

Extended Description:

Verify Supplier Invoices business activity check supplier invoice accuracy, invoice information and confirms delivery of supplies according to the purchase order.

Support Production

Process Identifier: 1.7.10.4

Hierarchy Level: 3

Brief Description:

Support Enterprise Production business activity manage production planning across value streams and effective production execution.

Extended Description:

Support Enterprise Production business activity manage production planning across value streams and effective production execution.

Manage Production Execution

Process Identifier: 1.7.10.4.2

Hierarchy Level: 4

Brief Description:

Manage Production Execution business activity support capturing actual production information from products/services/resources to support overall production control and cost management processes.

Extended Description:

Manage Production Execution business activity support capturing actual production information from products/services/resources to support overall production control and cost management processes.

Manage Production Scheduling

Process Identifier: 1.7.10.4.1

Hierarchy Level: 4

Brief Description:

Manage Production Scheduling business activity support assigning of production orders to resources, services, and products based on required sequence and time frame.

Extended Description:

Manage Production Scheduling business activity support assigning of production orders to resources, services, and products based on required sequence and time frame.

Manage Warehousing

Process Identifier: 1.7.10.5

Hierarchy Level: 3

Brief Description:

Manage Warehousing business activity support all logistics related to handling inbound, outbound, and cross-docking of supplies with safe storage to support Inventory handling activities.

Extended Description:

Manage Warehousing business activity support all logistics related to handling inbound, outbound, and cross-docking of supplies with safe storage to support Inventory handling activities.

Manage Inbound Supplies

Process Identifier: 1.7.10.5.2

Hierarchy Level: 4

Brief Description:

Manage Inbound Supplies activity support receiving inbound supplies.

Extended Description:

Manage Inbound Supplies activity support receiving inbound supplies.

Manage Inventory

Process Identifier: 1.7.10.5.1

Hierarchy Level: 4

Brief Description:

Manage Inventory supports activities for planning and executing inventory to support core business process inventory management activities.

Extended Description:

Manage Inventory supports activities for planning and executing inventory to support core business process inventory management activities.

Manage Outbound Supplies

Process Identifier: 1.7.10.5.3

Hierarchy Level: 4

Brief Description:

Manage Outbound Suppliers activity support preparing and shipping supplies to their intended destinations.

Extended Description:

Manage Outbound Suppliers" activity support preparing and shipping supplies to their intended destinations.

Manage Supply Routing

Process Identifier: 1.7.10.5.4

Hierarchy Level: 4

Brief Description:

Manage Supply Routing or (Cross Docking) handle the direct crossing of supplies received with supplies issuing.

Extended Description:

Manage Supply Routing or (Cross Docking) handle the direct crossing of supplies received with supplies issuing.

Manage Fulfillment

Process Identifier: 1.7.10.6

Hierarchy Level: 3

Brief Description:

Manage Fulfillment business activity address oversight of all order processing and billing across the enterprise.

Extended Description:

Manage Fulfillment business activity address oversight of all order processing and billing across the enterprise.

Support Fulfillment

Process Identifier: 1.7.10.6.1

Hierarchy Level: 4

Brief Description:

Support Fulfillment business activity guides all order entries, decomposition, workflow tracking and fallout resolution.

Extended Description:

Support Fulfillment business activity guides all order entries, decomposition, workflow tracking and fallout resolution.

Support Fulfillment ensure cross domain and inter vertical orchestration of fulfillment activities, such as between products and services and resources in the enterprise and for reach of its operating markets. It defines how fulfillment is established and completed for requesting customers and entities. This indicates the channels (mutlichannel focused) the organization utilizes, and the levels of support it offers to any engaged party (customers and entities).

Manage Logistics

Process Identifier: 1.7.10.7

Hierarchy Level: 3

Brief Description:

Manage Logistics business activity handle transportation planning, transportation execution, freight handling of supplies.

Extended Description:

Manage Logistics business activity handle transportation planning, transportation execution, freight handling of supplies.

Manage Supply Chain Storage

Process Identifier: 1.7.10.7.1

Hierarchy Level: 4

Brief Description:

Manage Supply Chain Storage business activity handles the allocation and safe keeping of supplies.

Extended Description:

Manage Supply Chain Storage business activity handles the allocation and safe keeping of supplies.

Manage Supply Chain Transport

Process Identifier: 1.7.10.7.2

Hierarchy Level: 4

Brief Description:

Manage Supply Chain Transport business activity handles the allocation and safe transport of supplies.

Extended Description:

Manage Supply Chain Transport business activity handles the allocation and safe transport of supplies.

Enterprise Security Management

Process Identifier: 1.7.11

Hierarchy Level: 2

Brief Description:

Enterprise Security Management processes develop and operate the organization's capability to protect critical assets, systems, and personnel from security threats through structured strategy, governance, control, and response mechanisms.

Extended Description:

Enterprise Security Management processes develop and operate the organization's capability to protect critical assets, systems, and personnel from security threats through structured strategy, governance, control, and response mechanisms.

It defines security objectives and governance structures, assesses security-specific risks, and implements administrative, technical, and physical controls across the organization. Enterprise Security Management also embeds security policies into day-to-day operations, manages security incidents through detection, response, and recovery, and fosters a proactive security culture through training and awareness programs.

Enterprise Security Management is focused on the specialized domain of security risk and acts as a tactical and operational layer for safeguarding confidentiality, integrity, and availability in a rapidly evolving threat landscape.

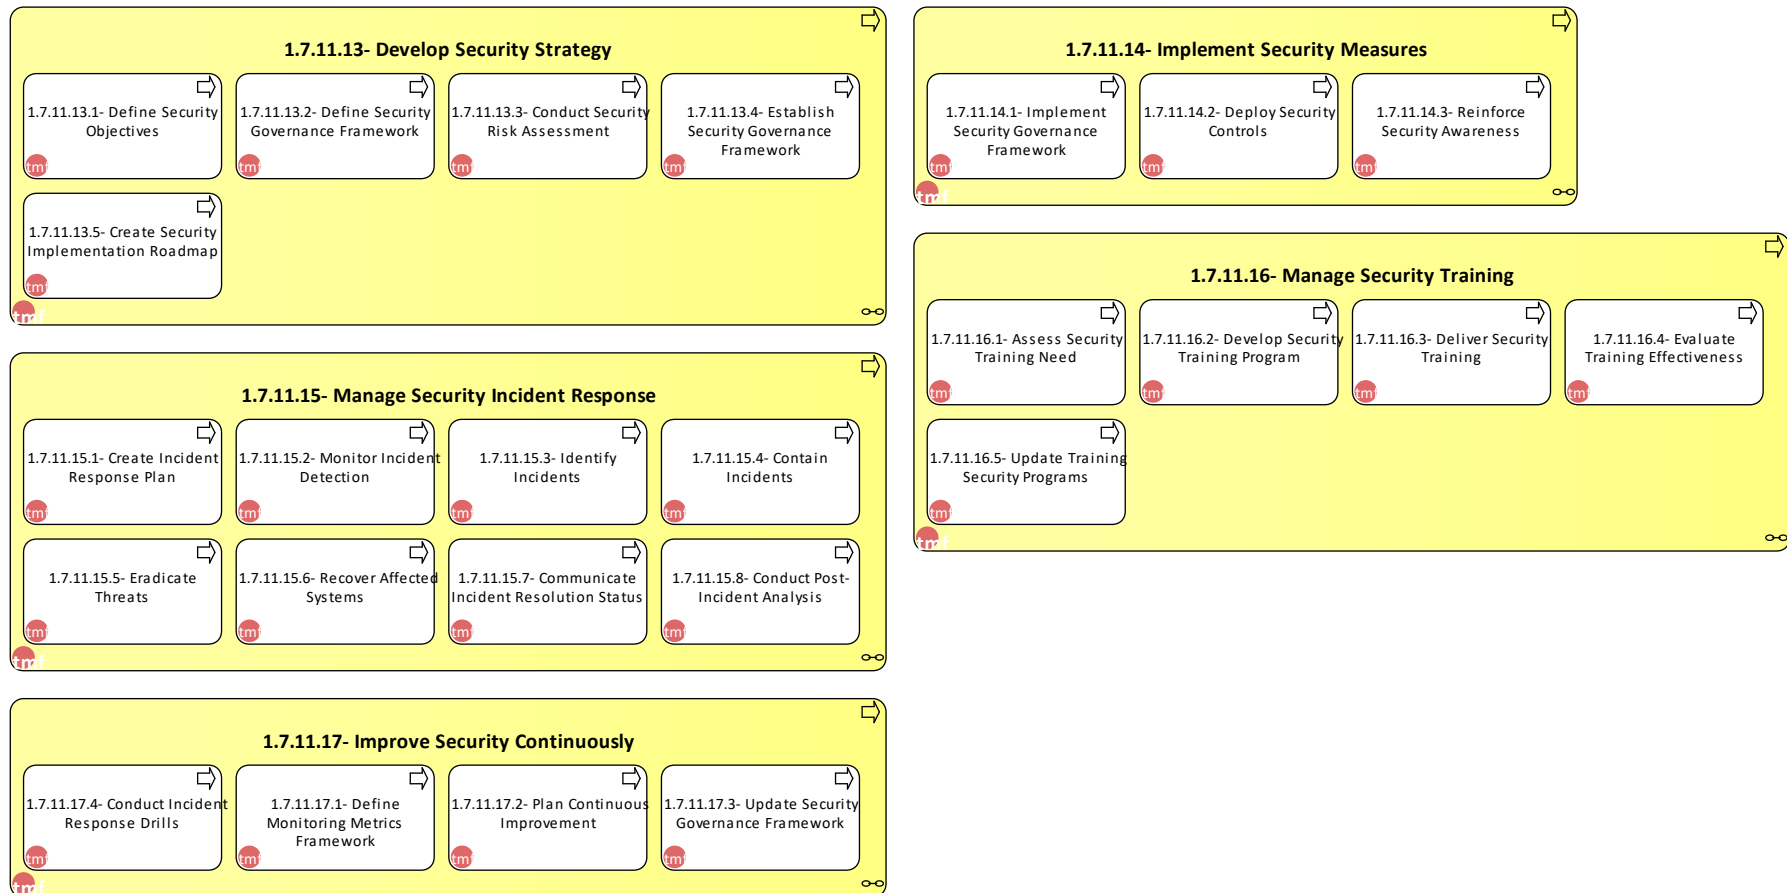

Figure 16: Enterprise Security Management Children

Develop Security Strategy

Process Identifier: 1.7.11.13

Hierarchy Level: 3

Brief Description:

Develop the security strategy aligned with organizational objectives, risks, and regulatory requirements.

Extended Description:

Creates a comprehensive security plan that aligns with organizational objectives and regulatory requirements. This process involves assessing risks, defining security objectives, establishing governance frameworks, and developing policies, procedures, and controls to protect critical assets and ensure resilience. The strategy provides a clear roadmap for implementing security measures and continuously improving the organization's security posture.

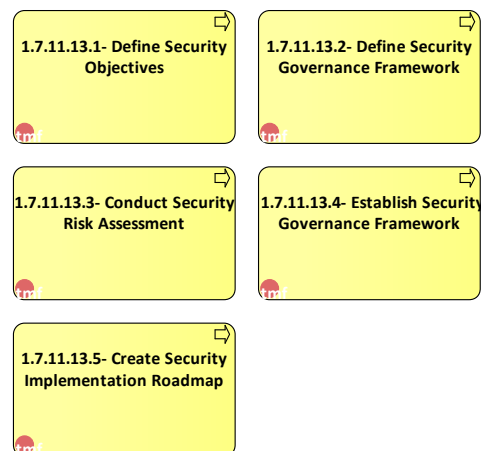

Figure 17: Develop Security Strategy Children

Define Security Objectives

Process Identifier: 1.7.11.13.1

Hierarchy Level: 4

Brief Description:

Define measurable security objectives and scope aligned with organizational priorities and risk tolerance.

Extended Description:

Define Security Objectives (and their scope) establishes clear and measurable security goals aligned with organizational priorities and regulatory requirements. This process determines the scope of security efforts, including the systems, data, assets, and processes to be protected, ensuring alignment with the organization's overall mission and risk tolerance.

Define Security Governance Framework

Process Identifier: 1.7.11.13.2

Hierarchy Level: 4

Brief Description:

Define the policies, procedures, and controls that make up the security governance framework.

Extended Description:

Define Security Governance Framework creates comprehensive security policies, detailed procedures, and actionable controls to safeguard organizational assets and mitigate risks. These elements establish the standards, guidelines, and specific measures required to ensure compliance with regulatory requirements, align with security objectives, and address identified risks.

Conduct Security Risk Assessment

Process Identifier: 1.7.11.13.3

Hierarchy Level: 4

Brief Description:

Identify, analyze, and evaluate security risks to support informed mitigation decisions.

Extended Description:

Conduct Security Risk Assessment Identifies, analyzes, and evaluates potential risks to determine their impact and likelihood, enabling informed decisions to mitigate threats and safeguard objectives. It involves systematically identifying potential risks that could impact an organization's objectives, analyzing these risks to evaluate their likelihood and potential impact, and prioritizing them based on their severity.

Establish Security Governance Framework

Process Identifier: 1.7.11.13.4

Hierarchy Level: 4

Brief Description:

Establish the security governance framework, including roles, responsibilities, and oversight mechanisms.

Extended Description:

Establish Security Governance Framework establishes a structured framework to define roles, responsibilities, decision-making processes, and accountability mechanisms for managing security across the organization. The Governance Framework ensures alignment with organizational objectives, regulatory requirements, and industry standards, providing a foundation for consistent oversight, risk management, and strategic execution. The framework fosters cross-functional collaboration and enables scalability, adaptability, and resilience in dynamic environments.

Create Security Implementation Roadmap

Process Identifier: 1.7.11.13.5

Hierarchy Level: 4

Brief Description:

Create the roadmap for implementing prioritized security initiatives, controls, and milestones.

Extended Description:

Create a Roadmap for Security Implementation develops a structured and actionable plan to implement security initiatives, policies, and controls. This roadmap outlines prioritized activities, timelines, resource allocations, and milestones to ensure alignment with strategic objectives and organizational priorities. It serves as a guide for executing the security strategy efficiently and adapting to evolving risks and operational needs.

Implement Security Measures

Process Identifier: 1.7.11.14

Hierarchy Level: 3

Brief Description:

Implement and operationalize security measures across day-to-day business operations.

Extended Description:

Implement Measures for Security in Operations executes and operationalizes security strategies, policies, and controls across the organization. This involves deploying technical, administrative, and physical security measures, integrating them into daily business operations, and ensuring consistency to safeguard assets, mitigate risks, and support organizational objectives. It also emphasizes seamless collaboration between security teams and operational units to enhance resilience and efficiency.

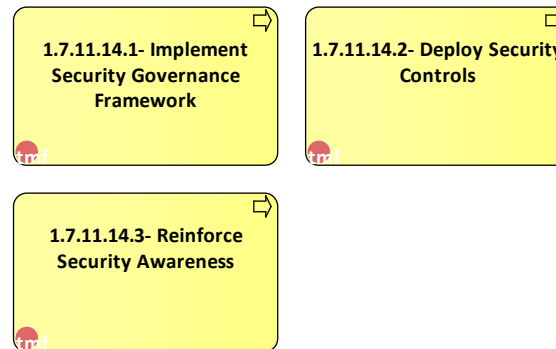

Figure 18: Implement Security Measures Children

Implement Security Governance Framework

Process Identifier: 1.7.11.14.1

Hierarchy Level: 4

Brief Description:

Implement the security governance framework and monitor compliance with security requirements.

Extended Description:

Implement Security Governance Framework operationalizes and oversees the implementation of security governance frameworks, policies, and compliance requirements. This includes monitoring adherence to regulatory standards, managing compliance reporting, and addressing any gaps to ensure continuous alignment with organizational security objectives and legal obligations. It focuses on maintaining accountability, enabling transparency, and mitigating risks in day-to-day operations.

Deploy Security Controls

Process Identifier: 1.7.11.14.2

Hierarchy Level: 4

Brief Description:

Deploy and test technical, physical, and administrative security controls.

Extended Description:

Deploy Security Controls implements technical, physical, and administrative controls (e.g., firewalls, access control systems, encryption, monitoring tools and other security control-related tools).

This includes deploying appropriate security measures based on risk assessment, and configuring systems and devices to prevent vulnerabilities.

Installing selected security tools and technologies and performing tests, vulnerability scans, and audits to ensure implemented measures are effective.

Reinforce Security Awareness

Process Identifier: 1.7.11.14.3

Hierarchy Level: 4

Brief Description:

Reinforce security awareness through ongoing engagement, reminders, and awareness activities.

Extended Description:

Reinforce Security Awareness ensures that security remains an integral part of the organization's culture by implementing continuous engagement initiatives, periodic reminders, and interactive activities. This process aims to sustain and enhance employees' security mindset beyond formal training sessions through various awareness mechanisms, ensuring long-term behavioral change and risk reduction.

Manage Security Incident Response

Process Identifier: 1.7.11.15

Hierarchy Level: 3

Brief Description:

Manage detection, response, recovery, and coordination for operational security incidents.

Extended Description:

Manage Operational Incidents Response detects, analyzes, responds to, and recovers from security incidents to minimize their impact on organizational operations and ensure business continuity. This process includes implementing pre-defined response and recovery plans, coordinating with stakeholders, and facilitating swift restoration of normal operations. It emphasizes proactive preparation, timely communication, effective mitigation, and post-incident analysis to strengthen defenses, prevent recurrence, and enhance organizational resilience.

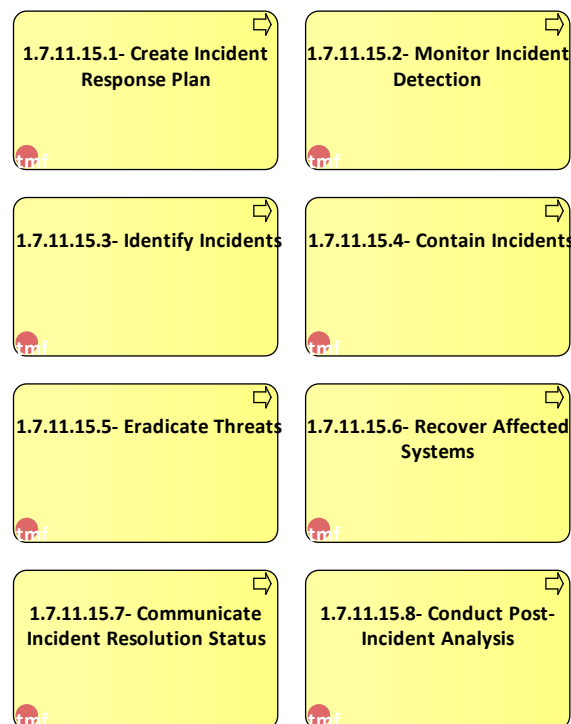

Figure 19: Manage Security Incident Response Children

Create Incident Response Plan

Process Identifier: 1.7.11.15.1

Hierarchy Level: 4

Brief Description:

Create the incident response plan, including roles, procedures, and response actions.

Extended Description:

Create Incident Response Plan creates a structured and actionable plan for identifying, managing, and mitigating security incidents. This process identifies potential impacts, establishes roles and responsibilities, and outlines procedures for responding to various types of incidents. It ensures that the organization is prepared for a swift and effective response, minimizing the impact on operations, safeguarding critical assets, and maintaining business continuity.

Monitor Incident Detection

Process Identifier: 1.7.11.15.2

Hierarchy Level: 4

Brief Description:

Monitor security systems, logs, and alerts to detect potential incidents in real time.

Extended Description:

Monitor Incident Detection refers to the continuous observation and evaluation of security systems, logs, and alerts to identify potential security incidents in real time. This process involves tools, predefined thresholds, and analytics to detect anomalies, unauthorized activities, or indicators of compromise. It ensures timely escalation and facilitates effective incident response by maintaining situational awareness and minimizing detection delays.

Identify Incidents

Process Identifier: 1.7.11.15.3

Hierarchy Level: 4

Brief Description:

Identify and classify confirmed security incidents based on their nature, scope, and impact.

Extended Description:

"Identify Incidents" involves analyzing detected anomalies or alerts to confirm whether they are a security incident, determining the nature and scope of the incident, and categorizing it based on predefined criteria such as severity, type, and impact. This process ensures appropriate prioritization, facilitates effective response actions, and aligns with the organization's incident management framework.

Contain Incidents

Process Identifier: 1.7.11.15.4

Hierarchy Level: 4

Brief Description:

Contain incidents to limit their spread and operational impact.

Extended Description:

Contain Incidents activates the measures to limit the spread and impact of incidents through isolation of affected systems, disabling compromised accounts, and blocking malicious traffic.

Eradicate Threats

Process Identifier: 1.7.11.15.5

Hierarchy Level: 4

Brief Description:

Eradicate threats by removing root causes, vulnerabilities, and malicious artifacts.

Extended Description:

Eradicate Threats identifies and eliminates the root cause of any incidents. This includes removing malware, closing vulnerabilities, and applying patches.

Recover Affected Systems

Process Identifier: 1.7.11.15.6

Hierarchy Level: 4

Brief Description:

Recover affected systems and services to normal operation after a security incident.

Extended Description:

Recover Affected Systems restores impacted systems and services to normal operation after a security breach or incident has occurred. This may involve restoring data from backups, rebuilding systems, and verifying the integrity of restored systems.

Communicate Incident Resolution Status

Process Identifier: 1.7.11.15.7

Hierarchy Level: 4

Brief Description:

Communicate incident resolution status to relevant internal and external stakeholders.

Extended Description:

Communicate Incident Resolution Status informs relevant stakeholders, e.g., incident response team, management, customers, and other affected parties including external stakeholders about the incident resolution.

Conduct Post-Incident Analysis

Process Identifier: 1.7.11.15.8

Hierarchy Level: 4

Brief Description:

Conduct post-incident analysis to capture lessons learned and improve response plans.

Extended Description:

Conduct Post-Incident Analysis conducts a thorough analysis of the incident to document what happened and lessons learned, how it was handled, and update the incident response plan with improvements that can be made to prevent future incidents.

Manage Security Training

Process Identifier: 1.7.11.16

Hierarchy Level: 3

Brief Description:

Manage security awareness and training programs to build organizational preparedness and resilience.

Extended Description:

Manage Security Awareness & Training ensures organizational resilience by fostering a culture of security awareness and preparedness. This process involves assessing training needs, developing and delivering tailored security training programs, reinforcing awareness, and evaluating the effectiveness of training initiatives. It promotes ongoing education to adapt to emerging threats and updates programs to address evolving security challenges.

Figure 20: Manage Security Training Children

Assess Security Training Need

Process Identifier: 1.7.11.16.1

Hierarchy Level: 4

Brief Description:

Assess security training needs by identifying gaps in knowledge, skills, and awareness.

Extended Description:

Assess Security Training Needs identifies gaps in security knowledge, skills, and awareness across the organization. This process involves evaluating employee competencies, analyzing security risks, and considering regulatory and organizational requirements to determine training priorities and ensure targeted, effective security education.

Develop Security Training Program

Process Identifier: 1.7.11.16.2

Hierarchy Level: 4

Brief Description:

Develop security training programs tailored to organizational risks and compliance needs.

Extended Description:

Develop Security Training Programs creates targeted training materials and curricula tailored to the organization's security needs. This process involves designing engaging content that addresses current threats, compliance requirements, organizational policies and promotes employee awareness. The security training programs shall ensure that employees gain the knowledge and skills needed to recognize and respond to security risks effectively.

Deliver Security Training

Process Identifier: 1.7.11.16.3

Hierarchy Level: 4

Brief Description:

Deliver security training using appropriate methods and collect feedback for improvement.

Extended Description:

Deliver Security Training involves a series of activities designed to ensure that employees acquire the necessary security knowledge effectively.

- Prepare training sessions to be accessible to enrolled employees and ensure that all required materials are available and fit for purpose.
- Conduct training using appropriate delivery methods such as online courses, workshops, in-person sessions, seminars, or webinars to maximize engagement and effectiveness.
- Gather feedback from participants to assess training effectiveness and continuously improve future sessions.

Evaluate Training Effectiveness

Process Identifier: 1.7.11.16.4

Hierarchy Level: 4

Brief Description:

Evaluate the effectiveness of security training and identify improvement opportunities.

Extended Description:

Evaluate Training Effectiveness ensures that security training initiatives achieve their intended objectives by systematically monitoring and assessing their impact, relevance, and effectiveness. This process involves gathering data from various sources, analyzing training outcomes, and identifying areas for improvement to enhance future training programs.

Update Training Security Programs

Process Identifier: 1.7.11.16.5

Hierarchy Level: 4

Brief Description:

Update security training programs to reflect evolving threats, needs, and requirements.

Extended Description:

Update Training Security Programs ensures that security training materials, content, and delivery methods remain relevant, effective, and aligned with evolving threats, organizational needs, and regulatory requirements. This process involves regularly reviewing and enhancing training programs based on feedback, security trends, compliance updates, and effectiveness assessments.

Improve Security Continuously

Process Identifier: 1.7.11.17

Hierarchy Level: 3

Brief Description:

Continuously improve the security posture through metrics, initiatives, policy updates, and drills.

Extended Description:

Improve Security Continuously is an ongoing process that ensures the organization's security posture evolves proactively to address emerging threats, vulnerabilities, and regulatory changes. This process involves defining and tracking key security metrics, implementing structured improvement initiatives, updating policies and procedures, and conducting regular security drills to enhance resilience. By fostering a culture of continuous security enhancement, the organization minimizes risks, strengthens defenses, and maintains compliance with evolving industry standards.

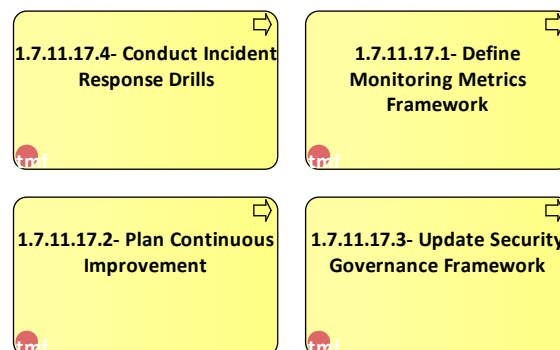

Figure 21: Improve Security Continuously Children

Define Monitoring Metrics Framework

Process Identifier: 1.7.11.17.1

Hierarchy Level: 4

Brief Description:

Define the key security metrics and monitoring mechanisms used to measure security effectiveness.

Extended Description:

Establish key security performance indicators (KPIs) and monitoring mechanisms to measure security effectiveness, detect vulnerabilities, and track improvements over time

Plan Continuous Improvement

Process Identifier: 1.7.11.17.2

Hierarchy Level: 4

Brief Description:

Plan continuous security improvement initiatives based on assessments, incidents, and compliance changes.

Extended Description:

Plan Continuous Improvement identifies areas for security enhancement based on assessments, incident reports, threat intelligence, and compliance changes. Develop and prioritize improvement initiatives to strengthen security resilience.

Update Security Governance Framework

Process Identifier: 1.7.11.17.3

Hierarchy Level: 4

Brief Description:

Update the security governance framework to reflect evolving threats, requirements, and practices.

Extended Description:

Update Security Governance Framework ensures a periodic review and updating of all security policies, standards, and operational procedures to align with evolving threats, regulatory requirements, and best practices. Ensure clear communication and enforcement across the organization.

Conduct Incident Response Drills

Process Identifier: 1.7.11.17.4

Hierarchy Level: 4

Brief Description:

Conduct incident response drills to test readiness, identify gaps, and refine response protocols.

Extended Description:

Simulate security incidents, including cyberattacks, data breaches, and insider threats, to test response readiness, identify gaps, and enhance organizational resilience. Assess team performance and refine response protocols accordingly.

Enterprise Asset Management

Process Identifier: 1.7.12

Hierarchy Level: 2

Brief Description:

Enterprise Asset Management business process is used to manage and support the enterprises asset budgeting, asset lifecycle management, asset control, asset valuation, asset operations and asset decommissioning across all categories of asset (capital, fix

Extended Description:

Enterprise Asset Management business process is used to manage and support the enterprises asset budgeting, asset lifecycle management, asset control, asset valuation, asset operations and asset decommissioning across all categories of asset (capital, fixed etc.).

Enterprise Asset Management process also manage policy aspects of the assets (physical: including corporate real-estate, fleets, infrastructure, etc.) and consumables etc.

Asset management process oversee the operations and maintenance of capital assets (e.g. Facilities such as buildings, data centers, sites and other equipment).

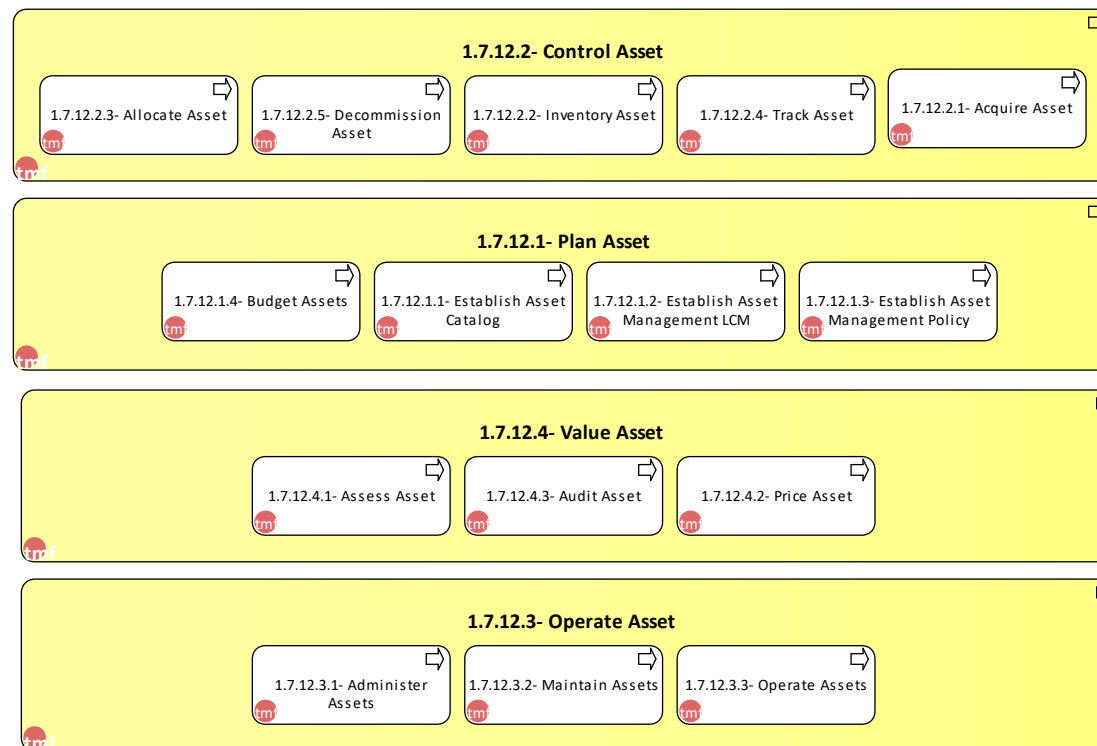

Figure 22: Enterprise Asset Management Children

Plan Asset

Process Identifier: 1.7.12.1

Hierarchy Level: 3

Brief Description:

Plan Asset business activity defines and provides the roadmap for achieving value from assets by optimizing cost, risk and performance across the asset lifecycle.

Extended Description:

Plan Asset business activity defines and provides the roadmap for achieving value from assets by optimizing cost, risk and performance across the asset lifecycle.

Plan Asset business activity address the all the needs that support implementation activities necessary to realize an organization's asset management objectives, which translate its strategic intent.

Establish Asset Catalog

Process Identifier: 1.7.12.1.1

Hierarchy Level: 4

Brief Description:

Establish Asset Catalog business activity defines and organizes different assets into classes and their properties for effective control, operations and valuation.

Extended Description:

Establish Asset Catalog business activity defines and organizes different assets into classes and their properties for effective control, operations and valuation.

Establish Asset Catalog will identify types of assets, asset properties, asset access need etc.

Establish Asset Management LCM

Process Identifier: 1.7.12.1.2

Hierarchy Level: 4

Brief Description:

Establish Asset Lifecycle Management business activity support optimizing the value derived from assets through their lifetime.

Extended Description:

Establish Asset Lifecycle Management business activity support optimizing the value derived from assets through their lifetime.

Establish Asset Lifecycle Management business activity ensures that each asset, based on the catalog type, has a lifecycle that covers planning, acquisition, operation & maintenance, and disposal/decommissioning.

Establish Asset Management Policy

Process Identifier: 1.7.12.1.3

Hierarchy Level: 4

Brief Description:

Establish Asset Management Policy defines the key principles, responsibilities and approach to all asset catalog management types and categories.

Extended Description:

Establish Asset Management Policy defines the key principles, responsibilities and approach to all asset catalog management types and categories.

Effectively executing Establish Asset Management Policy address: scope and purpose, definitions of policies, capitalization thresholds, additions, transfers, disposals and losses, inventory and periodic audits/assessment of conditions and maintenance and repair.

Budget Assets

Process Identifier: 1.7.12.1.4

Hierarchy Level: 4

Brief Description:

Budget Asset business activity enables the organization to capture new assets into the organizations budget.

Extended Description:

Budget Asset business activity enables the organization to capture new assets into the organizations budget.

Budget Asset business activity establish dimensions to use in asset budgeting and the relationship to business line activities; support Cataloging Assets and Capital acquisition planning.

Control Asset

Process Identifier: 1.7.12.2

Hierarchy Level: 3

Brief Description:

Control Asset business activity handle the acquisition, inventory, allocation, tracking and decommissioning or disposal of assets tracking.

Extended Description:

Control Asset business activity handle the acquisition, inventory, allocation, tracking and decommissioning or disposal of assets tracking.

The enterprise leverages Control Asset business activity to monitor all the stages in the lifecycle of an asset, including location, user, reservation, scheduling (maintenance, decommissioning, disposal etc.) damage reports, usage reports etc.

Acquire Asset

Process Identifier: 1.7.12.2.1

Hierarchy Level: 4

Brief Description:

Asset Acquisition business activity handle the purchase or buying of assets by the enterprise.

Extended Description:

Asset Acquisition business activity handle the purchase or buying of assets by the enterprise.

Inventory Asset

Process Identifier: 1.7.12.2.2

Hierarchy Level: 4

Brief Description:

Inventory Assets business activity handle the inventory of products, parts or raw materials that the organization intends to sell or dispose.

Extended Description:

Inventory Assets business activity handle the inventory of products, parts or raw materials that the organization intends to sell or dispose.

Allocate Asset

Process Identifier: 1.7.12.2.3

Hierarchy Level: 4

Brief Description:

Allocate Asset business activity implement the strategy of assignment of assets in the enterprise.

Extended Description:

Allocate Asset business activity implement the strategy of assignment of assets in the enterprise.

Track Asset

Process Identifier: 1.7.12.2.4

Hierarchy Level: 4

Brief Description:

Track Asset business activity monitor all assets, their movements, value and state based on established asset lifecycle management.

Extended Description:

Track Asset business activity monitor all assets, their movements, value and state based on established asset lifecycle management.

Decommission Asset

Process Identifier: 1.7.12.2.5

Hierarchy Level: 4

Brief Description:

Decommission Asset business activity handle the activities that remove assets from active use by following the established asset management policy.

Extended Description:

Decommission Asset business activity handle the activities that remove assets from active use by following the established asset management policy.

Operate Asset

Process Identifier: 1.7.12.3

Hierarchy Level: 3

Brief Description:

Operate Asset business activity administer, maintain and operate assets in use by the enterprise on an ongoing basis.

Extended Description:

Operate Asset business activity administer, maintain and operate assets in use by the enterprise on an ongoing basis.

Operate Asset business activities ensure that the organization can address energy needs, operational and technical support for assets, has reliable maintenance in place, and can continuously realize value from assets.

Administer Assets

Process Identifier: 1.7.12.3.1

Hierarchy Level: 4

Brief Description:

Administer Asset business activity handles the day-to-day administrative support services for assets.

Extended Description:

Administer Asset business activity handles the day-to-day administrative support services for assets.

Maintain Assets

Process Identifier: 1.7.12.3.2

Hierarchy Level: 4

Brief Description:

Maintain Asset business activity handles routine and periodic activities that preserve the value of assets

Extended Description:

Maintain Asset business activity handles routine and periodic activities that preserve the value of assets.

This business activity will also record and maintain up-to-date information on maintenance and service of assets.

Operate Assets

Process Identifier: 1.7.12.3.3

Hierarchy Level: 4

Brief Description:

Operate Asset business activity handles the day-to-day running of assets used to conduct ongoing operations of the enterprise.

Extended Description:

Operate Asset business activity handles the day-to-day running of assets used to conduct ongoing operations of the enterprise.

Value Asset

Process Identifier: 1.7.12.4

Hierarchy Level: 3

Brief Description:

Value Asset business activity determines the market or present value of assets through audits, assessment, pricing models.

Extended Description:

Value Asset business activity determines the market or present value of assets through audits, assessment, pricing models.

Value Asset business activity relies on book values, absolute valuation models like discounted cash flow analysis, option pricing models or comparable.

Assess Asset

Process Identifier: 1.7.12.4.1

Hierarchy Level: 4

Brief Description:

Assess Asset business activity handles periodic inspection and monitoring of assets to determine the condition and state of an asset.

Extended Description:

Assess Asset business activity handles periodic inspection and monitoring of assets to determine the condition and state of an asset.

Price Asset

Process Identifier: 1.7.12.4.2

Hierarchy Level: 4

Brief Description:

Price Asset business activity handles fixing the value of an asset through pricing principles and valuation models.

Extended Description:

Price Asset business activity handles fixing the value of an asset through pricing principles and valuation models.

Audit Asset

Process Identifier: 1.7.12.4.3

Hierarchy Level: 4

Brief Description:

Asset Audit business activity handles the verification to compare an enterprises “official” catalog of assets to actual assets "physically" located / us within the enterprise, or for business.

Extended Description:

Asset Audit business activity handles the verification to compare an enterprises “official” catalog of assets to actual assets "physically" located / us within the enterprise, or for business.

Asset Audit ensures that accounting for capital assets and depreciation is in compliance with business management objectives.

Enterprise Performance Management

Process Identifier: 1.7.13

Hierarchy Level: 2

Brief Description:

Enterprise Performance Management (EPM) is a business process that connects strategy with planning and execution. It focuses on providing a comprehensive set of business activities to link financial to operational planning to achieve the organizations goals.

Extended Description:

Enterprise Performance Management (EPM) is a business process that connects strategy with planning and execution. It focuses on providing a comprehensive set of business activities to link financial to operational planning to achieve the organizations goals.

The Enterprise Performance Management process group focuses on defining enterprise performance goals, strategic management (including integrated performance planning & budgeting), forecast management, performance assessment and measuring, performance analysis, business rules performance management, enterprise policies & procedure performance evaluation, business process performance management, performance reporting (including Performance Feedback to business domains) and business activity consolidation, reconciliation & Close (to support Enterprise Risk Management process).

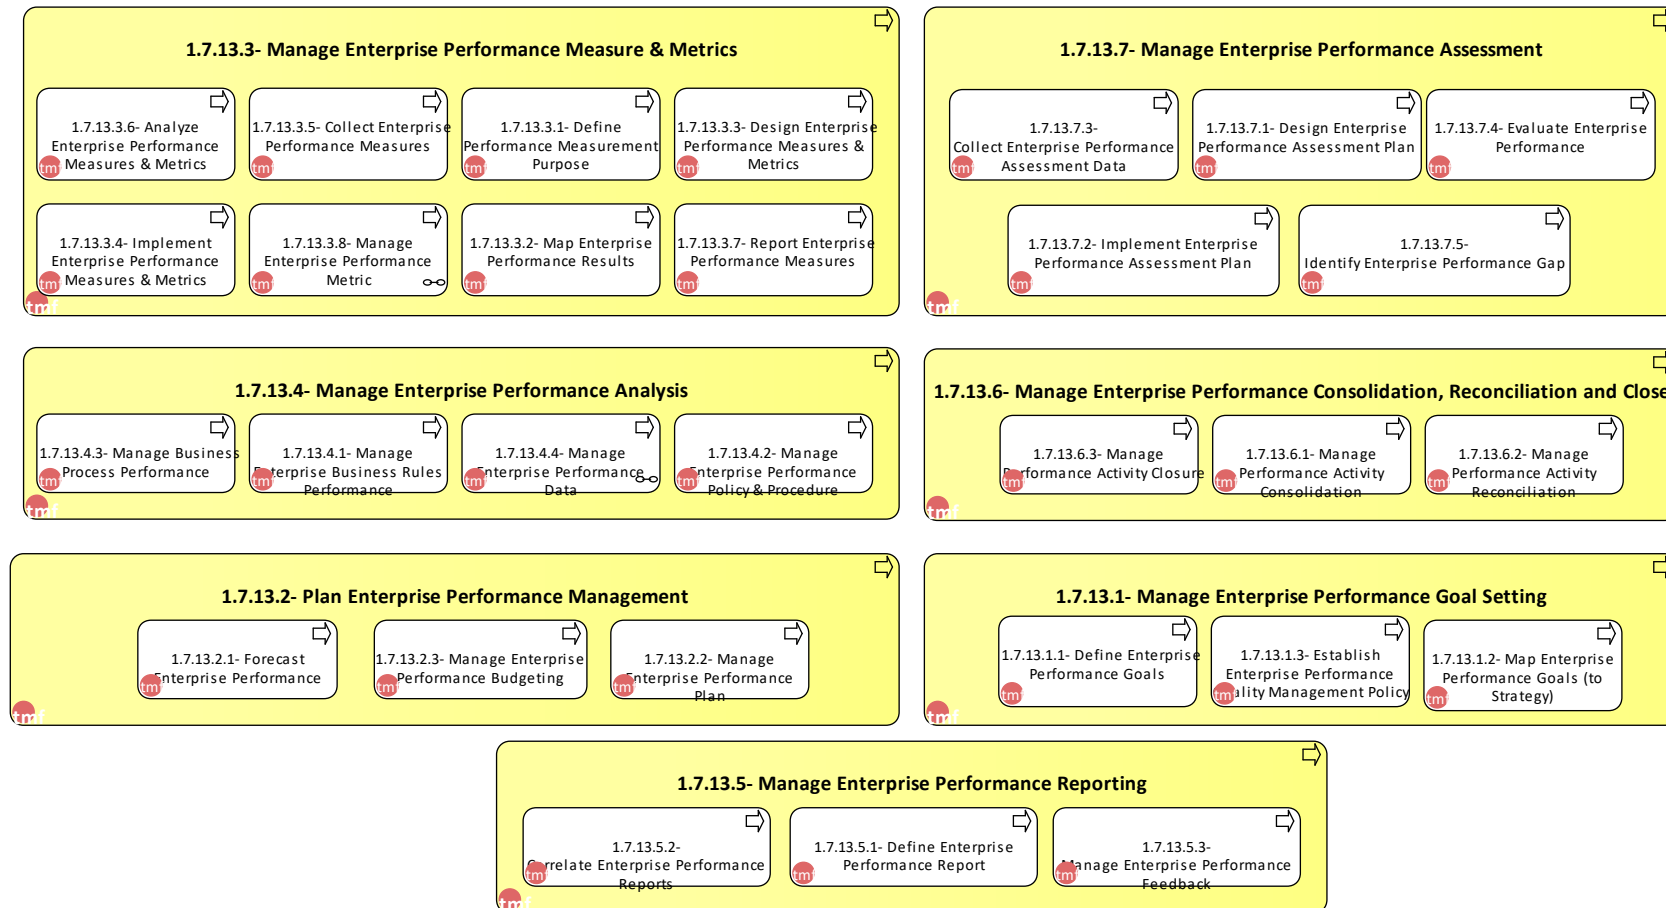

Figure 23: Enterprise Performance Management Children

Manage Enterprise Performance Goal Setting

Process Identifier: 1.7.13.1

Hierarchy Level: 3

Brief Description:

Manage Enterprise Performance Goal Setting business activity is in charge of setting all enterprise performance goals.

Extended Description:

Manage Enterprise Performance Goal Setting business activity is in charge of setting all enterprise performance goals.

Define Enterprise Performance Goals

Process Identifier: 1.7.13.1.1

Hierarchy Level: 4

Brief Description:

Define Enterprise Performance Goal business activity state and describe the enterprise performance objectives and targets that express a commitment to achieve specified results in a certain period of time.

Extended Description:

Define Enterprise Performance Goal business activity state and describe the enterprise performance objectives and targets that express a commitment to achieve specified results in a certain period of time.

Map Enterprise Performance Goals (to Strategy)

Process Identifier: 1.7.13.1.2

Hierarchy Level: 4

Brief Description:

Map Enterprise Performance Goals business activity is in charge of plotting defined enterprise performance goals to enterprise goals in order to turn enterprise resources into desired outcome.

Extended Description:

Map Enterprise Performance Goals business activity is in charge of plotting defined enterprise performance goals to enterprise goals in order to turn enterprise resources into desired outcome.

Map Enterprise Performance Goals helps in applying systems thinking to the enterprise strategic management goals by identifying and linking enterprise performance inputs, processes and enterprise performance objectives.

Establish Enterprise Performance Quality Management Policy

Process Identifier: 1.7.13.1.3

Hierarchy Level: 4

Brief Description:

Establish Enterprise Performance Quality Management Policy sets up and institutionalizes policies for quality performance management that achieve organization-wide acceptance and recognition.

Extended Description:

Establish Enterprise Performance Quality Management Policy sets up and institutionalizes policies for quality performance management that achieve organization-wide acceptance and recognition.

Establish Enterprise Performance Quality Management Policy business activities will also define the enterprise quality management policies and the enterprise model for quality management. They support all operations and lifecycle processes in the implementation and control of this model.

Note that quality is actually assessed within each area of the enterprise, but follows the guidelines defined by this process, which provides a template for specific applications of quality management in any areas of the Enterprise

Plan Enterprise Performance Management

Process Identifier: 1.7.13.2

Hierarchy Level: 3

Brief Description:

Plan Enterprise Performance Management business activity is in charge of defining and integrating altogether the enterprises' strategy plans, defining the direction, and making decisions on allocation of material resources in pursuant of its strategy.

Extended Description:

Plan Enterprise Performance Management business activity is in charge of defining and integrating altogether the enterprises' strategy plans, defining the direction, and making decisions on allocation of material resources in pursuant of its strategy.

Plan Strategic Management business activity includes documenting enterprise goals, setting priorities, defining targets, arranging material resources, establishing operating mandates, and ensuring stakeholders are working toward common goals with establish agreements around intended outcomes.

Forecast Enterprise Performance

Process Identifier: 1.7.13.2.1

Hierarchy Level: 4

Brief Description:

Forecast Enterprise Performance business activity is in charge of calculating or estimating, based on data from previous performance results combined with recent trends, future enterprise performance.

Extended Description:

Forecast Enterprise Performance business activity is in charge of calculating or estimating, based on data from previous performance results combined with recent trends, future enterprise performance.

Forecast Enterprise Performance makes use of forecasting techniques that use samples of enterprise performance observations to predict future enterprise performance.

Manage Enterprise Performance Plan

Process Identifier: 1.7.13.2.2

Hierarchy Level: 4

Brief Description:

Manage Enterprise Performance Plan business activity is in charge of controlling and directing the enterprise performance blueprint based on all activities that are required to achieve performance goals and objectives.

Extended Description:

Manage Enterprise Performance Plan business activity is in charge of controlling and directing the enterprise performance blueprint based on all activities that are required to achieve performance goals and objectives.

In Manage Enterprise Performance Plan business activity, reference is made to the overall purpose/mission of the enterprise based on its desired results by taking stock of outside and inside activities, understanding the enterprises' situation, understanding performance goals and the strategic management goals, along with the objectives that help to achieve the goals.

Manage Enterprise Performance Budgeting

Process Identifier: 1.7.13.2.3

Hierarchy Level: 4

Brief Description:

Manage Enterprise Performance Budgeting business activity is in charge of directing and controlling performance information for the allocation, spending, and management of enterprise resources.

Extended Description:

Manage Enterprise Performance Budgeting business activity is in charge of directing and controlling performance information for the allocation, spending, and management of enterprise resources.

An enterprise resource is enterprise stock, or supply of money, materials, staff and other assets that can be drawn on by the enterprise in order to function effectively. Manage Enterprise Performance Budgeting activities improve investment and spend prioritization for enterprise resources in order to increase the efficiency and effectiveness of all enterprise expenditure.

Manage Enterprise Performance Measure & Metrics

Process Identifier: 1.7.13.3

Hierarchy Level: 3

Brief Description:

Manage Performance Measure business activity is in charge of defining, collecting, analyzing and/or reporting information about accomplishments (applies to core enterprise activities, corporate activities and shared or COE activities).

Extended Description:

Manage Performance Measure business activity is in charge of defining, collecting, analyzing and/or reporting information about accomplishments (applies to core enterprise activities, corporate activities and shared or COE activities).

Manage Performance Measure business activity can be leveraged across the entire enterprise and its core business, including use at an individual level, organizational function level, organization level, system or component. Definitions of performance measure must be predicated on why performance is being measured.

Define Performance Measurement Purpose

Process Identifier: 1.7.13.3.1

Hierarchy Level: 4

Brief Description:

Define Performance Measurement Purpose business activity state and describe the exact scope and meaning of enterprise performance measures in accordance with the enterprise performance goals and plan for enterprise performance management as a whole.

Extended Description:

Define Performance Measurement Purpose business activity state and describe the exact scope and meaning of enterprise performance measures in accordance with the enterprise performance goals and plan for enterprise performance management as a whole.

Map Enterprise Performance Results

Process Identifier: 1.7.13.3.2

Hierarchy Level: 4

Brief Description:

Map Enterprise Performance Results business activity assign appropriate relations to connect performance measures with performance results.

Extended Description:

Map Enterprise Performance Results business activity assign appropriate relations to connect performance measures with performance results.

Map Enterprise Performance Results rely on enterprise performance models to provide a line of sight from the enterprise goals directly to recommended learning activities. Mapping performance results drives decisions when correlating strategies to enterprise activities.

Design Enterprise Performance Measures & Metrics

Process Identifier: 1.7.13.3.3

Hierarchy Level: 4

Brief Description:

Design Enterprise Performance Measures & Metrics business activity is in charge of conceiving and defining enterprise performance measures and metrics in accordance with the enterprise performance measurement purpose.

Extended Description:

Design Enterprise Performance Measures & Metrics business activity is in charge of conceiving and defining enterprise performance measures and metrics in accordance with the enterprise performance measurement purpose.

This business activity ensures that the organization can define and determine the most appropriate performance measures based on the enterprises goals. The measures may be internally developed, or may be based on externally produced or collected measures.

Examples of external measures could be customer satisfaction surveys, within or across market segments, or benchmarking studies of particular aspects of the enterprise performance. Examples of internal performance measures can be based on financial performance (i.e. progress against budget), operational process performance based metrics, or employee related measures such as employee opinion surveys.

Implement Enterprise Performance Measures & Metrics

Process Identifier: 1.7.13.3.4

Hierarchy Level: 4

Brief Description:

Implement Enterprise Performance Measures & Metrics business activity is in charge of putting into effect enterprise performance measures and metrics.

Extended Description:

Implement Enterprise Performance Measures & Metrics business activity is in charge of putting into effect enterprise performance measures and metrics.

Implement Performance Measures and Metrics identify the organization unit/function/entity to be responsible for the performance measure in order to support the activity of performance reporting.

Collect Enterprise Performance Measures

Process Identifier: 1.7.13.3.5

Hierarchy Level: 4

Brief Description:

Collect Enterprise Performance Measures business activity is in charge of identifying and gathering the quantification of performance attributes of an enterprise according to performance objectives.

Extended Description:

Collect Enterprise Performance Measures business activity is in charge of identifying and gathering the quantification of performance attributes of an enterprise according to performance objectives.

Analyze Enterprise Performance Measures & Metrics

Process Identifier: 1.7.13.3.6

Hierarchy Level: 4

Brief Description:

Analyze Enterprise Performance Measures & Metrics business activity examine (or inspect) methodically details of enterprise performance measures and their correlated metrics in order to support explainability and interpretability.

Extended Description:

Analyze Enterprise Performance Measures & Metrics business activity examine (or inspect) methodically details of enterprise performance measures and their correlated metrics in order to support explainability and interpretability.

This business activity is responsible for scrutinizing and decomposing measures and metrics, resolving relationships between metrics and measures, and discovering or revealing relevance to the enterprise.

Report Enterprise Performance Measures

Process Identifier: 1.7.13.3.7

Hierarchy Level: 4

Brief Description:

Report Enterprise Performance Measures business activity provide observed account of enterprise performance according the enterprises' requirement.

Extended Description:

Report Enterprise Performance Measures business activity provide observed account of enterprise performance according the enterprises' requirement.

Report Performance Measures business activity presents to management and decision makers (including executive managers, boards of directors, etc.) well-defined and described detail of performance metrics on a regular basis.

This business activity checks that the goals defined for the enterprise are on track and being met. These processes produce the enterprise Balanced Scorecard. Also produce summary reports.

Manage Enterprise Performance Metric

Process Identifier: 1.7.13.3.8

Hierarchy Level: 4

Brief Description:

Manage Enterprise Performance Metric business activity is in charge managing the coordination of the stages of enterprise performance metrics, from analysis, communicating, evaluation and reporting.

Extended Description:

Manage Enterprise Performance Metric business activity is in charge managing the coordination of the stages of enterprise performance metrics, from analysis, communicating, evaluation and reporting.

Manage Enterprise Performance Metric business activity will define and maintain the specification of Performance metrics by providing, say, high-level description, detailed specification (formulas, thresholds, rules, consequences), applicability, status etc.

Manage Metric also include metric measurement operations: execution of on-demand and recurring collection jobs, rule evaluation, and consequences (actions and notifications).

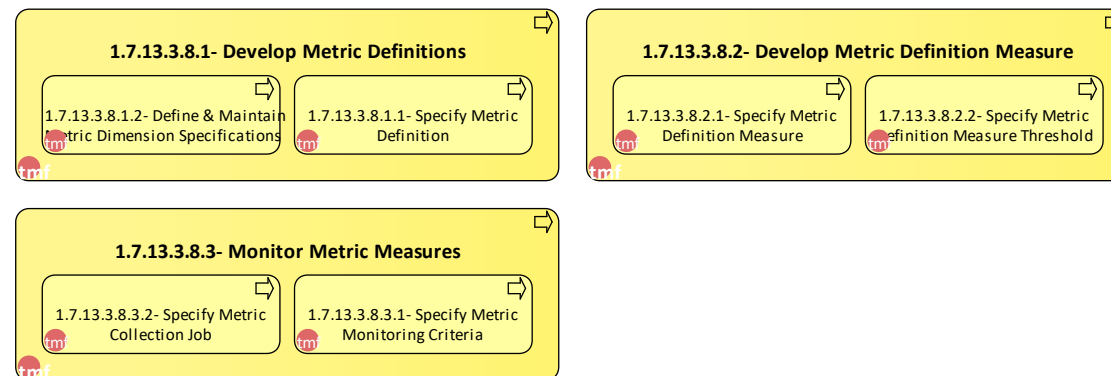

Figure 24: Manage Enterprise Performance Metric Children

Develop Metric Definitions

Process Identifier: 1.7.13.3.8.1

Hierarchy Level: 5

Brief Description:

Characterize and maintain a Metric at high level: identification, description, categorization, dependencies.

Extended Description:

Metric Definition Development defines and maintains various identifications and names, high-level descriptions, status data, categories, grouping, hierarchies, and dependencies with respect to other Metrics.

Define & Maintain Metric Dimension Specifications

Process Identifier: 1.7.13.3.8.1.2

Hierarchy Level: 6

Brief Description:

Define grouping (categories, dimensions) and dependencies (including hierarchies) of a Metric with respect to other Metrics.

Extended Description:

Metric Dimension Specification defines and maintains for each Metric: categories (organizational or technical classifications), dimensions (time, space, user groups, priority levels, ...), cross-references, dependencies, and tree hierarchies which characterize the Metric with respect to other Metrics.

Specify Metric Definition

Process Identifier: 1.7.13.3.8.1.1

Hierarchy Level: 6

Brief Description:

Define a Metric (with identification and high-level description), and maintain the status of the Metric specification.

Extended Description:

Metric Definition Specification defines and maintains the following for each Metric: one or multiple IDs (for different repositories or identification schemes), one or multiple names (for different naming schemes), high-level description, business value, comments, and status data (entry date, last-used date, active/inactive, maturity level, validity period, etc.).

Develop Metric Definition Measure

Process Identifier: 1.7.13.3.8.2

Hierarchy Level: 5

Brief Description:

Specify the details for measuring a Metric, as well as the threshold values and threshold-crossing rules and consequences.

Extended Description:

Metric Definition Measure Development specifies detailed Metric formulas (ratios or other equations), detailed data acquisition methods, and measurement units. Metric Definition Measure Development also specifies threshold values and threshold-crossing rules and consequences.

Specify Metric Definition Measure

Process Identifier: 1.7.13.3.8.2.1

Hierarchy Level: 6

Brief Description:

Define the detailed methodology for measuring a Metric (especially calculation formulas).

Extended Description:

Metric Definition Measure Specification specifies details for measuring a Metric: prose-style and spreadsheet-style calculation formulas and equations (possibly including other Metrics), raw data sources, raw data capture methods (including APIs), measurement units.

Specify Metric Definition Measure Threshold

Process Identifier: 1.7.13.3.8.2.2

Hierarchy Level: 6

Brief Description:

Define threshold values and threshold-crossing rules (actions, consequences), applicable to a given Metric.

Extended Description:

Metric Definition Measure Threshold Specification defines threshold values and intervals, with comparators for direction of threshold-crossing, applicable to a given Metric. Metric Definition Measure Threshold Specification also specifies threshold-crossing rules and consequences (actions to be performed, notifications to be sent).

Monitor Metric Measures

Process Identifier: 1.7.13.3.8.3

Hierarchy Level: 5

Brief Description:

Specify sets of objects to be measured for a given Metric, and specify collection job time schedules.

Extended Description:

Metric Measure Monitoring specifies monitoring scope (object filters), collection time schedule, and conditions for measurement jobs corresponding to a Metric.

Specify Metric Collection Job

Process Identifier: 1.7.13.3.8.3.2

Hierarchy Level: 6

Brief Description:

Define a recurrence schedule for collecting and computing data to obtain Metric measurements for a set of objects.

Extended Description:

Metric Collection Job Specification specifies the time schedule for a data collection task ("job") for a Metric, applied to a selected set of objects. Metric Collection Job Specification defines the frequency, periodicity, or any time-based repetition of a measurement campaign. Metric Collection Job Specification also defines any additional constraints and conditions driving the Collection Job.

Specify Metric Monitoring Criteria

Process Identifier: 1.7.13.3.8.3.1

Hierarchy Level: 6

Brief Description:

Define sets of objects selected to be measured using a given Metric.

Extended Description:

Metric Monitoring Criteria Specification defines filters which are used to select a scope of objects to be measured according to a Metric.

Manage Enterprise Performance Analysis

Process Identifier: 1.7.13.4

Hierarchy Level: 3

Brief Description:

Manage Performance Analysis business activity is in charge of examining, reviewing, directing and comparing performance based on well-defined situations in contrast to the enterprises goals.

Extended Description:

Manage Performance Analysis business activity is in charge of examining, reviewing and comparing performance based on well-defined situations in contrast to the enterprises goals.

Manage Performance Analysis business tasks include systematic observation to provide valid, reliable and detailed information, investigation and correlating performance, and providing explanation and interpretation to performance.

Manage Enterprise Business Rules Performance

Process Identifier: 1.7.13.4.1

Hierarchy Level: 4

Brief Description:

Manage Business Rules Performance business activity is in charge of directing and controlling effect of business rules on enterprise performance.

Extended Description:

Manage Business Rules Performance business activity is in charge of directing and controlling effect of business rules on enterprise performance.

Managing Business Rules performance ensure that business rules are framed as a precise statement defining a term, fact, and a constraint. Manage Business Rules Performance support enterprise performance management formats are as declarative as possible.

Manage Enterprise Performance Policy & Procedure

Process Identifier: 1.7.13.4.2

Hierarchy Level: 4

Brief Description:

Manage Performance Policy & Procedure business activity is in charge of directing and controlling performance fairness (equity and/equitability) and procedure consistency across all areas defined for enterprise performance management.

Extended Description:

Manage Performance Policy & Procedure business activity is in charge of directing and controlling performance fairness (equity and/equitability) and procedure consistency across all areas defined for enterprise performance management.

This business activity provide management with tasks and guides that enable clear communication on the standards of activities, tasks and performance expectation to ensure performance standards are met.

Manage Business Process Performance

Process Identifier: 1.7.13.4.3

Hierarchy Level: 4

Brief Description:

Manage Business Process Performance business activity is in charge of directing controlling how efficient or effective business processes in the enterprise are defined and operationalized.

Extended Description:

Manage Business Process Performance business activity is in charge of directing controlling how efficient or effective business processes in the enterprise are defined and operationalized.

Manage Business Process Performance business activity supports checking the achievement of strategic and operational goals, as well as decision-making for the continuous optimization of business processes.

This business activity will also define the methodology to be employed in process design, process change management or process re-engineering activities across the enterprise. Appropriate reports on business process performance at the enterprise level are produced in line with Manage Performance Reporting business activities.

Manage Enterprise Performance Data

Process Identifier: 1.7.13.4.4

Hierarchy Level: 4

Brief Description:

Manage Enterprise Performance Data business activity is in charge of collecting and analyzing enterprise performance data.

Extended Description:

Manage Enterprise Performance Data business activity is in charge of collecting and analyzing enterprise performance data.

Note that performance is actually assessed within each area of the enterprise, but follows the guidelines defined by this process, which provides a template for specific applications of Performance Assessment in any areas of the Enterprise.

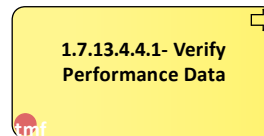

Figure 25: Manage Enterprise Performance Data Children

Verify Performance Data

Process Identifier: 1.7.13.4.4.1

Hierarchy Level: 5

Brief Description:

Verify Performance Data business activity handles all tasks that make sure or demonstrate that enterprise performance data are true, accurate or justified.

Extended Description:

Verify Performance Data business activity handles all tasks that make sure or demonstrate that enterprise performance data are true, accurate or justified.

The tasks here include verifying consistency of independent records of information related to all core processes altogether i.e. market, customer, product, service, business partner and resources within. It works with Manage Performance Consolidation, Reconciliation and Close and undertakes synchronization performance data across all core and enterprise activities for consistency.

Manage Enterprise Performance Reporting

Process Identifier: 1.7.13.5

Hierarchy Level: 3

Brief Description:

Manage Performance Reporting business activity provide the planning and reporting needed to achieve business outcomes. Manage Performance Reporting helps to promote a “continuous improvement” feedback loop where reports on activities and performance provide important information to allow for the best possible decision-making in the next planning cycle.

Extended Description:

Manage Performance Reporting business activity provide the planning and reporting needed to achieve business outcomes.

Manage Performance Reporting helps to promote a “continuous improvement” feedback loop where reports on activities and performance provide important information to allow for the best possible decision-making in the next planning cycle.

Define Enterprise Performance Report

Process Identifier: 1.7.13.5.1

Hierarchy Level: 4

Brief Description:

Define Enterprise Performance Report business activity provides the description of the representation of outcomes of any, and all business activities or business functions.

Extended Description:

Define Enterprise Performance Report business activity provides the description of the representation of outcomes of any, and all business activities or business functions.

Correlate Enterprise Performance Reports

Process Identifier: 1.7.13.5.2

Hierarchy Level: 4

Brief Description:

Correlate Enterprise Performance Reports business activity provides the relationships between multiple performance measures and insights.

Extended Description:

Correlate Enterprise Performance Reports business activity provides the relationships between multiple performance measures and insights.

Manage Enterprise Performance Feedback

Process Identifier: 1.7.13.5.3

Hierarchy Level: 4

Brief Description:

Manage Enterprise Performance Feedback business activity ensures that information necessary or relevant to be received by subjects are received through appropriate communication channels.

Extended Description:

Manage Enterprise Performance Feedback business activity ensures that information necessary or relevant to be received by subjects are received through appropriate communication channels.

Manage Enterprise Performance Consolidation, Reconciliation and Close

Process Identifier: 1.7.13.6

Hierarchy Level: 3

Brief Description:

Manage Enterprise Performance Consolidation, Reconciliation and Close is a compound business activity that involves managing the consolidation, reconciliation and close activities altogether in accordance to the enterprises' performance management requirement for both internal and external statutory needs.

Extended Description:

'Manage Enterprise Performance Consolidation, Reconciliation and Close' is a compound business activity that involves managing the consolidation, reconciliation and close activities altogether in accordance to the enterprises' performance management requirement for both internal and external statutory needs.

Manage Performance Activity Consolidation

Process Identifier: 1.7.13.6.1

Hierarchy Level: 4

Brief Description:

Manage Performance Activity Consolidation business activity collect data, eliminating intercompany positions, performing equity accounting and establishing group financial statements and analyzing financials.

Extended Description:

Manage Performance Activity Consolidation business activity collect data, eliminating intercompany positions, performing equity accounting and establishing group financial statements and analyzing financials.

Manage Performance Activity Reconciliation

Process Identifier: 1.7.13.6.2

Hierarchy Level: 4

Brief Description:

Manage Performance Activity Reconciliation business activity support the implementation and enforcement of reconciliation standards, policies, and procedures, and reconciling accounts and documenting accuracy.

Extended Description:

Manage Performance Activity Reconciliation business activity support the implementation and enforcement of reconciliation standards, policies, and procedures, and reconciling accounts and documenting accuracy.

Manage Performance Activity Closure

Process Identifier: 1.7.13.6.3

Hierarchy Level: 4

Brief Description:

Manage Performance Activity Closure business activity ensure closing readiness, close sub-ledgers, manage intercompany accounting and transfer pricing, execute general ledger accounting and close, reconcile accounts, prepare financial statements, perform management review and calculate tax provisions according to statutory mandates.

Extended Description:

Manage Performance Activity Closure business activity ensure closing readiness, close sub-ledgers, manage intercompany accounting and transfer pricing, execute general ledger accounting and close, reconcile accounts, prepare financial statements, perform management review and calculate tax provisions according to statutory mandates.

Manage Enterprise Performance Assessment

Process Identifier: 1.7.13.7

Hierarchy Level: 3

Brief Description:

Manage Enterprise Performance Assessment business activity is in charge directing and controlling enterprise performance assessment activities according to expectations of the enterprise performance goals and objectives.

Extended Description:

Manage Enterprise Performance Assessment business activity is in charge directing and controlling enterprise performance assessment activities according to expectations of the enterprise performance goals and objectives.

Manage Enterprise Performance Assessment business activity include enterprise performance assessment design, implementing enterprise performance assessment plans, collecting enterprise performance assessment data, evaluating, and identifying enterprise performance assessment gaps.

The Enterprise Performance Assessment processes can produce inputs for Enterprise Performance Reporting, including, as an example, an Enterprise Balanced Scorecards. These processes establish and administer relationship with external survey companies if required to provide external measures or assist in developing internal measures.

Note that performance is actually assessed within each area of the enterprise, but follows the guidelines defined by this process, which provides a template for specific applications of Performance Assessment in any areas of the Enterprise.

Design Enterprise Performance Assessment Plan

Process Identifier: 1.7.13.7.1

Hierarchy Level: 4

Brief Description:

Design Enterprise Performance Assessment Plan business activity decides the tasks, details and the model for executing enterprise performance assessment.

Extended Description:

Design Enterprise Performance Assessment Plan business activity decides the tasks, details and the model for executing enterprise performance assessment.

This business activity will include tasks to articulate assessment inputs, outcome/goals to focus on, determines evidence/indicators to be gathered, and defines criteria to use in determining enterprise performance effectiveness and/or success.

Implement Enterprise Performance Assessment Plan

Process Identifier: 1.7.13.7.2

Hierarchy Level: 4

Brief Description:

Implement the enterprise performance assessment plan to observe and evaluate performance against defined goals.

Extended Description:

Implement Enterprise Performance Assessment Plan business activity device and apply the tasks, details and models for enterprise performance assessment. Through 'Implement Enterprise Performance Assessment Plan', the enterprise is able to observe and evaluate performance according to the enterprise performance goals set.

Collect Enterprise Performance Assessment Data

Process Identifier: 1.7.13.7.3

Hierarchy Level: 4

Brief Description:

Collect Enterprise Performance Assessment Data business activity is responsible for gathering all data and information need to successfully support evaluating enterprise performance.

Extended Description:

Collect Enterprise Performance Assessment Data business activity is responsible for gathering all data and information need to successfully support evaluating enterprise performance.

This business activity will also include cleaning, storing, preparing and sharing enterprise performance assessment data.

Evaluate Enterprise Performance

Process Identifier: 1.7.13.7.4

Hierarchy Level: 4

Brief Description:

Evaluate Enterprise Performance business activity is responsible for deducing/calculating performance results according to well-defined enterprise performance goals and objectives (quality, importance, amount, or value etc.).

Extended Description:

Evaluate Enterprise Performance business activity is responsible for deducing/calculating performance results according to well-defined enterprise performance goals and objectives (quality, importance, amount, or value etc.). Evaluate Enterprise Performance business activity decides the overall performance results of the enterprise.

Identify Enterprise Performance Gap

Process Identifier: 1.7.13.7.5

Hierarchy Level: 4

Brief Description:

Identify Enterprise Performance Gap business activity is in charge of establishing the difference between intended and actual enterprise performance targets or performance standards based on performance goals and objectives.

Extended Description:

Identify Enterprise Performance Gap business activity is in charge of establishing the difference between intended and actual enterprise performance targets or performance standards based on performance goals and objectives.

Enterprise Governance Management

Process Identifier: 1.7.14

Hierarchy Level: 2

Brief Description:

Enterprise Governance Management business process manage activities that ensure accountability and control of the strategic direction of the organization.

Extended Description:

Enterprise Governance Management business process direct and control the activities that provide and assure accountability within the organization and with stakeholders.

Enterprise Governance Management business process include conformance (corporate governance which governing structure with responsibility matrix) and performance governance. Altogether, Enterprise Governance Management ensure alignment of the organizations strategic objectives, support the assessment and management of enterprise audits and risks, ensure that the organization resources are used responsibly. This business process develops the set of responsibilities and practices exercised by the board and executive management with the goal of supporting the strategic direction, ensuring enterprise objectives are achieved, ascertaining that risks are managed appropriately and verifying responsible Strategy-to-Operations activities.

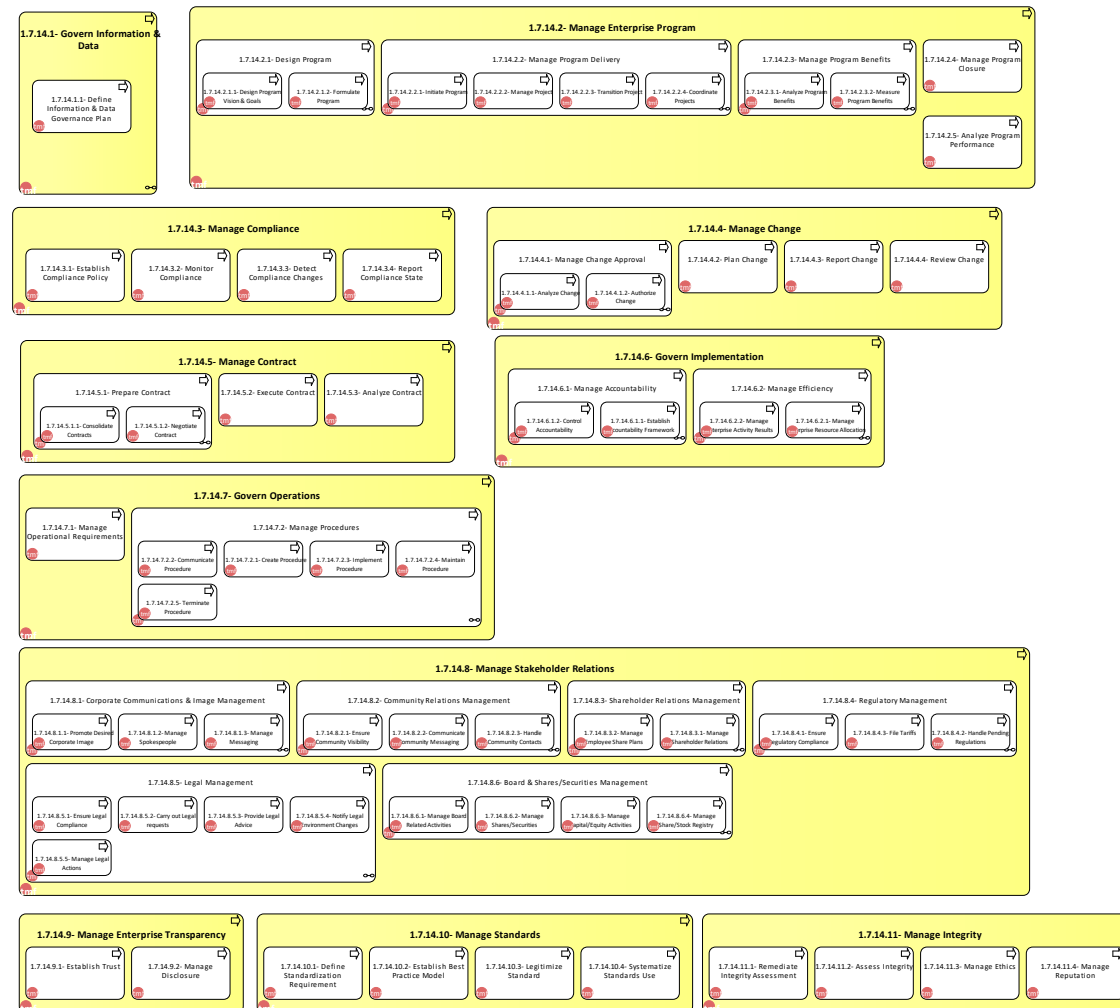

Figure 26: Enterprise Governance Management Children

Govern Information & Data

Process Identifier: 1.7.14.1

Hierarchy Level: 3

Brief Description:

Govern Information and Data business activity is in charge of tasks that oversee and supervise activities involved in managing information and data along with their related characteristics and assets.

Extended Description:

Govern Information and Data business activity is in charge of tasks that oversee and supervise activities involved in managing information and data along with their related characteristics and assets.

Define Information & Data Governance Plan

Process Identifier: 1.7.14.1.1

Hierarchy Level: 4

Brief Description:

Define Information & Data Governance Plan business activity is in charge of tasks that oversee the establishment of the blueprint and courses of action for the execution and enforcement of authority over the management of information and data and their related assets.

Extended Description:

Define Information & Data Governance Plan business activity is in charge of tasks that oversee the establishment of the blueprint and courses of action for the execution and enforcement of authority over the management of information and data and their related assets.

Manage Enterprise Program

Process Identifier: 1.7.14.2

Hierarchy Level: 3

Brief Description:

Manage Enterprise Program business activity maps, directs and controls programs to align with the enterprises business objectives and support organizational performance.

Extended Description:

Manage Enterprise Program business activity maps, directs and controls programs to align with the enterprises business objectives and support organizational performance.

Manage Program oversees and coordinates the various projects and strategic initiatives throughout the organization.

Design Program

Process Identifier: 1.7.14.2.1

Hierarchy Level: 4

Brief Description:

Design Program business activity is in charge conceiving and formulating plans that an organization uses to develop an enterprises corporate or shared program.

Extended Description:

Design Program business activity is in charge conceiving and formulating plans that an organization uses to develop an enterprises corporate or shared program.

Design Program business activity includes tasks that research and formulate programs, design program vision, goals and objectives.

Figure 27: Design Program Children

Design Program Vision & Goals

Process Identifier: 1.7.14.2.1.1

Hierarchy Level: 5

Brief Description:

Design Program Vision & Goals business activity is in charge of setting the program vision, program goals and course of action for programs.

Extended Description:

Design Program Vision & Goals business activity is in charge of setting the program vision, program goals and course of action for programs.

Formulate Program

Process Identifier: 1.7.14.2.1.2

Hierarchy Level: 5

Brief Description:

Formulate Program business activity is in charge of choosing the who, what, how, when, and where of pursuing program objectives according to program vision and goals.

Extended Description:

Formulate Program business activity is in charge of choosing the who, what, how, when, and where of pursuing program objectives according to program vision and goals.

Formulate Program business activity include tasks that define project specifications, provide framework for different projects to share similar overall objectives in coordinated manner.

Manage Program Delivery

Process Identifier: 1.7.14.2.2

Hierarchy Level: 4

Brief Description:

Manage Program Delivery business activity is in charge of directing and controlling all the activities involved in an enterprise program delivery.

Extended Description:

Manage Program Delivery business activity is in charge of directing and controlling all the activities involved in an enterprise program delivery.

Manage Program Delivery activities includes tasks that identify capabilities and knowledge required to successfully oversee the enterprises program delivery. These activities include identifying program performance criteria, tasks to ensure required capacity and steps to ensure that enterprise programs accomplish vision and the attainment of expected benefits.

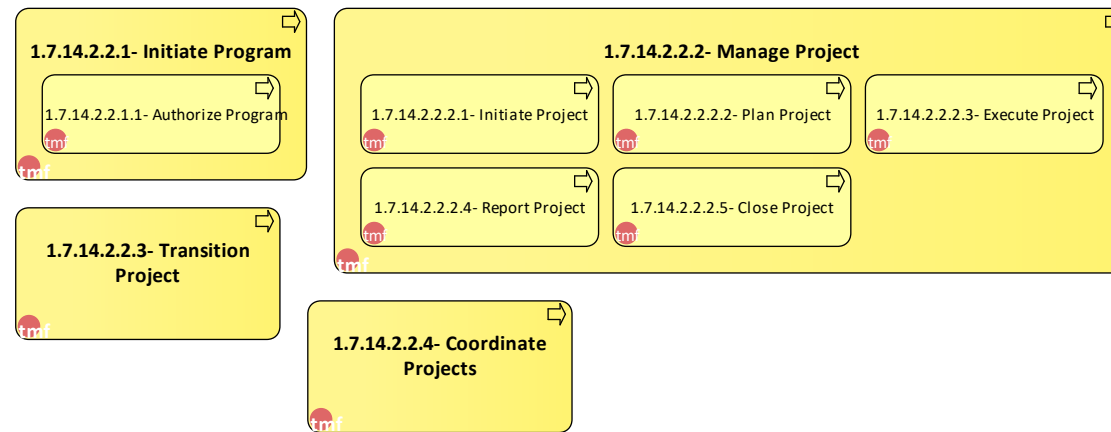

Figure 28: Manage Program Delivery Children

Initiate Program

Process Identifier: 1.7.14.2.2.1

Hierarchy Level: 5

Brief Description:

Initiate Program business activity handles all communications and authorizations required to initialize the start of a program.

This business activity includes tasks that establish the program management office.

Extended Description:

Initiate Program business activity handles all communications and authorizations required to initialize the start of a program.

This business activity includes tasks that establish the program management office.

Authorize Program

Process Identifier: 1.7.14.2.2.1.1

Hierarchy Level: 6

Brief Description:

Authorize Program business activity is in charge of getting all permissions and formal authorities needed for Initiate Program business activity.

Extended Description:

Authorize Program business activity is in charge of getting all permissions and formal authorities needed for Initiate Program business activity.

Manage Project

Process Identifier: 1.7.14.2.2.2

Hierarchy Level: 5

Brief Description:

Manage Project business activity is in charge of directing and controlling all responsibilities for activities involved in executing, reporting and closing projects according to program goals.

Extended Description:

Manage Project business activity is in charge of directing and controlling all responsibilities for activities involved in executing, reporting and closing projects according to program goals.

Manage Project business activity includes tasks that help to lead the work of a team to achieve all project goals within the given constraints.

Initiate Project

Process Identifier: 1.7.14.2.2.2.1

Hierarchy Level: 6

Brief Description:

Initiate Project business activity handle tasks that are performed to define a new project according to an enterprises program vision and goals.

Extended Description:

Initiate Project business activity handle tasks that are performed to define a new project according to an enterprises program vision and goals.

Plan Project

Process Identifier: 1.7.14.2.2.2.2

Hierarchy Level: 6

Brief Description:

Plan Project business activity handle tasks that are performed to establish the scope of a project, and define the course of action required to meet the objectives of the overarching enterprise program.

Extended Description:

Plan Project business activity handle tasks that are performed to establish the scope of a project, and define the course of action required to meet the objectives of the overarching enterprise program.

Plan Project business activity includes tasks that define monitoring and controlling activities required to successfully execute the project.

Execute Project

Process Identifier: 1.7.14.2.2.2.3

Hierarchy Level: 6

Brief Description:

Execute Project business activity handle tasks that complete work or actions as defined in the project plan.

Extended Description:

Execute Project business activity handle tasks that complete work or actions as defined in the project plan.

Report Project

Process Identifier: 1.7.14.2.2.2.4

Hierarchy Level: 6

Brief Description:

Report Project business activity handle tasks that provide account of status and progress of a project.

Extended Description:

Report Project business activity handle tasks that provide account of status and progress of a project.

Close Project

Process Identifier: 1.7.14.2.2.2.5

Hierarchy Level: 6

Brief Description:

Close Project business activity handle tasks that finalize all work and actions across all Manage Project activities to formally bring a project to an end.

Extended Description:

Close Project business activity handle tasks that finalize all work and actions across all Manage Project activities to formally bring a project to an end.

Transition Project

Process Identifier: 1.7.14.2.2.3

Hierarchy Level: 5

Brief Description:

Transition Project business activity handle tasks that manage the change of one project to another.

Extended Description:

Transition Project business activity handle tasks that manage the change of one project to another.

Coordinate Projects

Process Identifier: 1.7.14.2.2.4

Hierarchy Level: 5

Brief Description:

Coordinate Projects business activity handle activities that oversee the day-to-day management of inter-related projects.

Extended Description:

Coordinate Projects business activity handle activities that oversee the day-to-day management of inter-related projects.

Coordinate Projects business activity is responsible for coordinating projects in order to streamline the workflow of tasks that span multiple projects.

Manage Program Benefits

Process Identifier: 1.7.14.2.3

Hierarchy Level: 4

Brief Description:

Manage Program Benefits business activity define, direct and coordinate management of a program so as to achieve program goals and benefits.

Extended Description:

Manage Program Benefits business activity define, direct and coordinate management of a program so as to achieve program goals and benefits.

Figure 29: Manage Program Benefits Children

Analyze Program Benefits

Process Identifier: 1.7.14.2.3.1

Hierarchy Level: 5

Brief Description:

Analyze Program Benefits business activity handles tasks that examine the enterprises program benefits are aligned according to the designed program vision and goals.

Extended Description:

Analyze Program Benefits business activity handles tasks that examine the enterprises program benefits are aligned according to the designed program vision and goals.

Measure Program Benefits

Process Identifier: 1.7.14.2.3.2

Hierarchy Level: 5

Brief Description:

Measure Program Benefits business activity handle tasks that appraise 'how' Programs add value to the enterprise, and contribute to corporate and shared business objectives.

Extended Description:

Measure Program Benefits business activity handle tasks that appraise 'how' Programs add value to the enterprise, and contribute to corporate and shared business objectives.

Manage Program Benefits business activities include identifying benefit assumptions, all necessary changes and tasks to achieve the intended benefits (e.g. procedures and metrics, including key performance indicators (KPIs) that need to be in place to measure benefits achievement progress - Benefits Dependency Maps, performance of roles and responsibilities required to meet benefits etc.), and planning that sustains or increases program benefits.

Manage Program Closure

Process Identifier: 1.7.14.2.4

Hierarchy Level: 4

Brief Description:

Manage Program Closure business activity is in charge of directing and controlling the steps to bring an active enterprise program to an end.

Extended Description:

Manage Program Closure business activity is in charge of directing and controlling the steps to bring an active enterprise program to an end.

Manage Program Closure business activity helps to evaluate, transition, and improve the enterprises Manage Program capability over time. Manage Program Closure activity includes tasks that will capture lessons learned, opportunities for improvement and any other associated know-how.

Analyze Program Performance

Process Identifier: 1.7.14.2.5

Hierarchy Level: 4

Brief Description:

Analyze Program Performance business activity is in charge of examining and identifying Program Design vision and goals compared with actual Program results and outcome.

Extended Description:

Analyze Program Performance business activity is in charge of examining and identifying Program Design vision and goals compared with actual Program results and outcome.

Analyze Program Performance business activity includes tasks that compare scope, cost, schedule, and other resources used in order to determine how well the program met its objectives. Without Analyze Program Performance business activity, the enterprise is not able to know the effectiveness of a Program and inputs to enable successful Program Closure.

Manage Compliance

Process Identifier: 1.7.14.3

Hierarchy Level: 3

Brief Description:

Manage Compliance business activity is in charge of ensuring the workforce, stakeholders and their activities across the organization are in line with laws, regulations, and business requirements.

Extended Description:

Manage Compliance business activity is in charge of ensuring the workforce, stakeholders and their activities across the organization are in line with laws, regulations, and business requirements.

Manage Compliance business activity ensures adequate knowledge of government, regulatory agency under a particular regulation an enterprise is established, and operates. Knowledge Management is used to document procedures and policies in combination with Audits and Enforcement.

Establish Compliance Policy

Process Identifier: 1.7.14.3.1

Hierarchy Level: 4

Brief Description:

Establish Compliance Policy business activity develops and oversees implementation of compliance policy that apply to all activities of the enterprise to prevent, detect, monitor and report any compliance program in terms of the organization and its management

Extended Description:

Establish Compliance Policy business activity develops and oversees implementation of compliance policy that apply to all activities of the enterprise to prevent, detect, monitor and report any compliance program in terms of the organization and its management.

Establish Compliance Policy activity interact with Managing Legal and Regulatory Requirements, Managing Risks and Managing Internal Controls. This business activity uses knowledge of legal regulations and obligations under which an enterprise is established, and operates.

Monitor Compliance

Process Identifier: 1.7.14.3.2

Hierarchy Level: 4

Brief Description:

Monitor Compliance business activity is in charge of identifying, observing and keeping tracking of quality assurance tests that check how well their enterprises' business operations meet regulatory and internal process and procedural obligations.

Extended Description:

Monitor Compliance business activity is in charge of identifying, observing and keeping tracking of quality assurance tests that check how well the enterprises' business operations meet regulatory and internal process and procedural obligations.

Monitor Compliance business activity include tasks that develop compliance testing, also known as conformance testing for periodic, independent, and objective assessment of compliance-related processes and/or controls. Monitor Compliance plays a major role in helping to detect vulnerabilities in existing compliance risk management controls.

Detect Compliance Changes

Process Identifier: 1.7.14.3.3

Hierarchy Level: 4

Brief Description:

Detect Compliance Changes business activity is in charge of discovering differences between Established Compliance Policies and ongoing enterprise operations.

Extended Description:

Detect Compliance Changes business activity is in charge of discovering differences between Established Compliance Policies and ongoing enterprise operations.

Report Compliance State

Process Identifier: 1.7.14.3.4

Hierarchy Level: 4

Brief Description:

Report Compliance State business activity is in charge of providing documented evidence to show the enterprise and its business is compliant with established compliance policy requirements put in place.

Extended Description:

Report Compliance State business activity is in charge of providing documented evidence to show the enterprise and its business is compliant with established compliance policy requirements put in place.

Manage Change

Process Identifier: 1.7.14.4

Hierarchy Level: 3

Brief Description:

Manage Change business activity is in charge of planning, approving, reporting and reviewing changes across the enterprise.

Extended Description:

Manage Change business activity is in charge of planning, approving, reporting and reviewing changes across the enterprise.

Manage Change comprises systematic tasks that support transition or transformation of an organization's goals, processes or technologies. Through Manage Change, the organization implements strategies for effecting change, controlling change and helping adapt to change.

Manage Change Approval

Process Identifier: 1.7.14.4.1

Hierarchy Level: 4

Brief Description:

Manage Change Approval business activity is in charge of evaluating changes based n the impact on enterprise.

Extended Description:

Manage Change Approval business activity is in charge of evaluating changes based n the impact on enterprise.

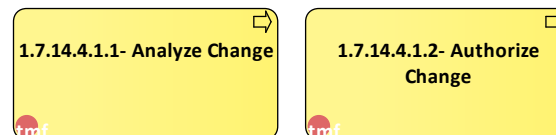

Figure 30: Manage Change Approval Children

Analyze Change

Process Identifier: 1.7.14.4.1.1

Hierarchy Level: 5

Brief Description:

Analyze Change business activity examine changes planned based on enterprise needs, risks and benefits.

Extended Description:

Analyze Change business activity examine changes planned based on enterprise needs, risks and benefits.

Authorize Change

Process Identifier: 1.7.14.4.1.2

Hierarchy Level: 5

Brief Description:

Authorize Change business activity endorse and permit a planned change for implementation based on enterprise needs in line with risk plans.

Extended Description:

Authorize Change business activity endorse and permit a planned change for implementation based on enterprise needs in line with risk plans.

Plan Change

Process Identifier: 1.7.14.4.2

Hierarchy Level: 4

Brief Description:

Plan Change business activity is in charge of establishing the course of action to making a change effective based on the conditions established by Manage Change Approval.

Extended Description:

Plan Change business activity is in charge of establishing the course of action to making a change effective based on the conditions established by Manage Change Approval.

Report Change

Process Identifier: 1.7.14.4.3

Hierarchy Level: 4

Brief Description:

Report Change business activity is in charge of communicating verbally or written planned changes and the impact identified.

Extended Description:

Report Change business activity is in charge of communicating verbally or written planned changes and the impact identified.

Review Change

Process Identifier: 1.7.14.4.4

Hierarchy Level: 4

Brief Description:

Review Change business activity is responsible for examining a change to ensure that it is ready for release for implementation.

Extended Description:

Review Change business activity is responsible for examining a change to ensure that it is ready for release for implementation.

Manage Contract

Process Identifier: 1.7.14.5

Hierarchy Level: 3

Brief Description:

Manage Contract business activity is in charge of managing contractual agreements, from their creation through to their execution by chosen party, as well as the termination of contracts.

Extended Description:

Manage Contract business activity is in charge of managing contractual agreements, from their creation through to their execution by chosen party, as well as the termination of contracts.

Manage Contract business activity cover tasks that include managing contract creation, execution of contracts, analysis of contracts to maximize operational and financial performance and reducing financial risk.

Prepare Contract

Process Identifier: 1.7.14.5.1

Hierarchy Level: 4

Brief Description:

Prepare Contract business activity is in charge of making ready, according to purpose, written contracts concerning agreements the enterprise and any of its functions intends to engage a party or entity for.

Extended Description:

Prepare Contract business activity is in charge of making ready, according to purpose, written contracts concerning agreements the enterprise and any of its functions intends to engage a party or entity for.

Prepare Contract business activity include activities that identify contractual needs, establish contractual goals, set expectations, and define risk and mitigatory conditions. Contracts can span employment, sale, or lease etc. or all agreements that are intended to be enforceable (by law or as established by the scope of the contract).

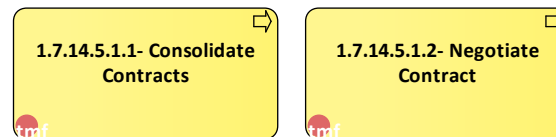

Figure 31: Prepare Contract Children

Consolidate Contracts

Process Identifier: 1.7.14.5.1.1

Hierarchy Level: 5

Brief Description:

Consolidate Contract business activity is in charge of combining contracts for similar products and/or services to form one single, all encompassing contract.

Extended Description:

Consolidate Contract business activity is in charge of combining contracts for similar products and/or services to form one single, all encompassing contract.

Consolidate Contract business activity supports Prepare Contract business activity by helping to reduce contract administration (executing, analyzing) and associated enterprise costs.

Negotiate Contract

Process Identifier: 1.7.14.5.1.2

Hierarchy Level: 5

Brief Description:

Negotiate Contract business activity is in charge of arranging for or bring about by discussion and settlement of contract terms.

Extended Description:

Negotiate Contract business activity is in charge of arranging for or bring about by discussion and settlement of contract terms.

Negotiate Contract involves several key steps to ensure the involved parties reach a mutually beneficial agreement.

It involves the following tasks:

- Setting the right tone from the beginning with a positive and professional attitude.

- Finalizing the contract ensuring that all negotiated points are clearly stated.

After the contract is signed, following up on the implementation of the contract terms to ensure compliance and address any issues promptly is important.

Execute Contract

Process Identifier: 1.7.14.5.2

Hierarchy Level: 4

Brief Description:

Execute Contract business activity is in charge of ensuring an enterprise business contract is fully signed by the contracting parties in order to formalize the contractual relationship.

Extended Description:

Execute Contract business activity is in charge of ensuring an enterprise business contract is fully signed by the contracting parties in order to formalize the contractual relationship.

To “execute a contract” means to perform the actions necessary to complete the contract’s terms or to sign a contract, making it legally binding. In legal terms.

An executed contract refers to:

- Signing: When all parties involved in the contract have agreed upon the terms and have signed the document, it is considered executed.
- Fulfillment: An executed contract can also mean that all obligations outlined in the contract have been met by the parties involved.

Analyze Contract

Process Identifier: 1.7.14.5.3

Hierarchy Level: 4

Brief Description:

Analyze Contract business activity is in charge of examining and tracking all information within a contract over its lifecycle and the impact or implications on the enterprises ongoing concerns.

Extended Description:

Analyze Contract business activity is in charge of examining and tracking all information within a contract over its lifecycle and the impact or implications on the enterprises ongoing concerns.

Analyze Contract business activity is effectively used throughout the contract lifecycle to address the enterprises' need to track implications at any point in time (financial or related to the status of the contract) to ensure that the clauses remain consistent and in line with any changes in the enterprises' operating policy.

Govern Implementation

Process Identifier: 1.7.14.6

Hierarchy Level: 3

Brief Description:

Govern Implementation business activity is in charge of controlling and directing any program management process that puts decision or plans into effect.

Extended Description:

Govern Implementation business activity is in charge of controlling and directing any program management process that puts decision or plans into effect.

Govern Implementation tasks ensure governance functions are in place for any implementation and deployment. The enterprise leverages Manage Conformance to ensure defined program blueprint are followed during implementation and delivery of projects.

Manage Accountability

Process Identifier: 1.7.14.6.1

Hierarchy Level: 4

Brief Description:

Manage Accountability business activity is in charge of directing and controlling obligations to responsibilities in the enterprise.

Extended Description:

Manage Accountability business activity is in charge of directing and controlling obligations to responsibilities in the enterprise.

Manage Accountability business activity includes tasks that must be completed in order to fulfill the obligations of a role. Manage Accountability supporting providing guidance and assuring ownership of activities.

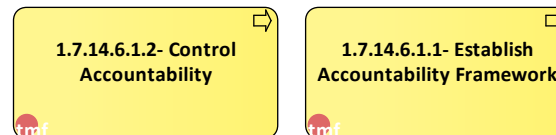

Figure 32: Manage Accountability Children

Control Accountability

Process Identifier: 1.7.14.6.1.2

Hierarchy Level: 5

Brief Description:

Control Accountability business activity is in charge of overseeing and regulating lines of command and responsibility.

Extended Description:

Control Accountability business activity is in charge of overseeing and regulating lines of command and responsibility.

Establish Accountability Framework

Process Identifier: 1.7.14.6.1.1

Hierarchy Level: 5

Brief Description:

Establish Accountability Framework business activity is in charge of defining and setting up the structure for lines of command, responsibility and communication of execution plans .

Extended Description:

Establish Accountability Framework business activity is in charge of defining and setting up the structure for lines of command, responsibility and communication of execution plans .

Establish Accountability Framework business activity ensure valid and integral representation of the chain of responsibilities that put decisions or implementation plans into effect.

Manage Efficiency

Process Identifier: 1.7.14.6.2

Hierarchy Level: 4**Brief Description:**

Manage Efficiency business activity is in charge of directing and controlling amount of enterprise asset or resources that produce results for the enterprise.

Extended Description:

Manage Efficiency business activity is in charge of directing and controlling amount of enterprise asset or resources that produce results for the enterprise.

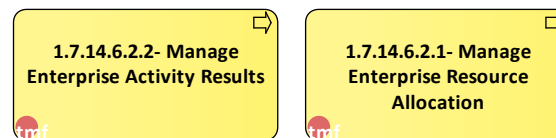

Figure 33: Manage Efficiency Children

Manage Enterprise Activity Results

Process Identifier: 1.7.14.6.2.2

Hierarchy Level: 5**Brief Description:**

Manage Enterprise Activity Results business activity is in charge of directing and controlling expected outcome of implementation of enterprise assets or resources.

Extended Description:

Manage Enterprise Activity Results business activity is in charge of directing and controlling expected outcome of implementation of enterprise assets or resources.

Manage Enterprise Resource Allocation

Process Identifier: 1.7.14.6.2.1

Hierarchy Level: 5

Brief Description:

Manage Enterprise Resource Allocation business activity is in charge of directing and controlling the distribution of resources aimed at delivering planned results.

Extended Description:

Manage Enterprise Resource Allocation business activity is in charge of directing and controlling the distribution of resources aimed at delivering planned results.

Govern Operations

Process Identifier: 1.7.14.7

Hierarchy Level: 3

Brief Description:

Govern Operations business activity is in charge of following through on the execution of policies.

Extended Description:

Govern Operations business activity is in charge of following through on the execution of policies.

Govern Operations allows the enterprise to state policies as business processes, and ensure established business policies are followed throughout all operations of the organization.

Manage Operational Requirements

Process Identifier: 1.7.14.7.1

Hierarchy Level: 4

Brief Description:

Manage Operational Requirements business activity is in charge of collecting, documenting, analyzing, tracing, prioritizing and agreeing on needs and wants that support fulfillment, assurance and accounting for management and use of enterprise resources.

Extended Description:

Manage Operational Requirements business activity is in charge of collecting, documenting, analyzing, tracing, prioritizing and agreeing on needs and wants that support fulfillment, assurance and accounting for management and use of enterprise resources.

Manage Operational Requirements business activity include capturing operational actions needed to effect ongoing operational activities and procedures (under fulfillment, assurance and accounting) in order to address operational mandates. It includes including capturing overarching operations deficiencies, evolving operational requirements, and understanding operational threats that must be addressed.

Manage Procedures

Process Identifier: 1.7.14.7.2

Hierarchy Level: 4

Brief Description:

Manage Procedure business activity is in charge of establishing, directing and controlling how to accomplish enterprise activities and tasks.

Extended Description:

Manage Procedure business activity is in charge of establishing, directing and controlling how to accomplish enterprise activities and tasks.

Manage Procedure business activity includes tasks that establish work instructions that describe specific steps to be handled in a process. This includes defining workflows or activity flows that include, as an example, how to effectively start a process, when to stop a process or escalate etc.

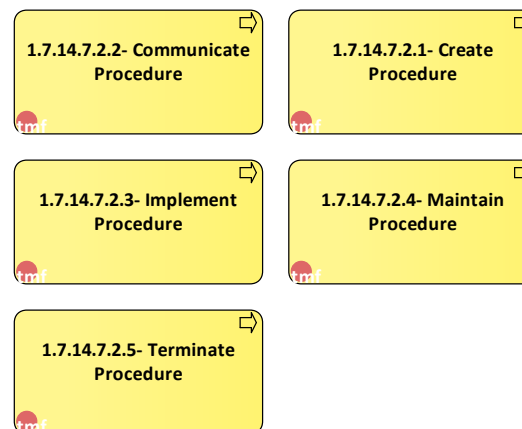

Figure 34: Manage Procedures Children

Communicate Procedure

Process Identifier: 1.7.14.7.2.2

Hierarchy Level: 5

Brief Description:

Communicate Procedure business activity is in charge of sharing or exchanging information on the existence and 'how to' of well-defined course/plan of performing activities (e.g. workflows) with parties concerned or having interest in a procedure.

Extended Description:

Communicate Procedure business activity is in charge of sharing or exchanging information on the existence and 'how to' of well-defined course/plan of performing activities (e.g. workflows) with parties concerned or having interest in a procedure.

Create Procedure

Process Identifier: 1.7.14.7.2.1

Hierarchy Level: 5

Brief Description:

Create Procedure business activity is in charge of establishing and developing ways to accomplish activities and tasks in the enterprise.

Extended Description:

Create Procedure business activity is in charge of establishing and developing ways to accomplish activities and tasks in the enterprise.

This business activity includes tasks to identify and integrate required enterprise policies into activities, identifies all user involvement, sets accuracy expectations, and control (checkpoints and feedback) points.

Implement Procedure

Process Identifier: 1.7.14.7.2.3

Hierarchy Level: 5

Brief Description:

Implement Procedure business activity is in charge of putting into effect 'how to's' for well-defined course/plans for performing activities.

Extended Description:

Implement Procedure business activity is in charge of putting into effect 'how to's' for well-defined course/plans for performing activities.

Maintain Procedure

Process Identifier: 1.7.14.7.2.4

Hierarchy Level: 5

Brief Description:

Maintain Procedure business activity is in charge of keeping procedures effective and running.

Extended Description:

Maintain Procedure business activity is in charge of keeping procedures effective and running.

Maintain Procedure business activity includes task that ensure procedures are supported with the right associated policies and resources and that they effectively do no lead to bottlenecks to achieving the goals they're setup to achieve.

Terminate Procedure

Process Identifier: 1.7.14.7.2.5

Hierarchy Level: 5

Brief Description:

Terminate Procedure business activity is in charge of ending or stopping and decommissioning a procedure from being operational.

Extended Description:

Terminate Procedure business activity is in charge of ending or stopping and decommissioning a procedure from being operational.

Manage Stakeholder Relations

Process Identifier: 1.7.14.8

Hierarchy Level: 3

Brief Description:

The Manage Stakeholder Relations processes grouping focus on managing the enterprise's relationship with stakeholders and outside entities.

Extended Description:

The Manage Stakeholder Relations process grouping focuses on managing the enterprise's relationship with stakeholders and outside entities. Stakeholders include shareholders, employee organizations, etc. Outside entities include regulators, local community, unions. Some of the processes within this grouping are Shareholder Relations, External Affairs, Labor Relations, Public Relations.

Corporate Communications & Image Management

Process Identifier: 1.7.14.8.1

Hierarchy Level: 4

Brief Description:

Communicate the required messages to the market and industry about the overall enterprise, and handle enquiries and other interactions with the mass media.

Extended Description:

Corporate Communications & Image Management processes are responsible for communicating the required messages to the market and industry about the overall enterprise. These include promotion of the desired corporate image for the enterprise and its general business and products. Areas such as sponsorship, corporate-level advertising and general contact with industry bodies, and government and regulatory agencies, are addressed here. Figure 35: Corporate Communications & Image Management Children

Promote Desired Corporate Image

Process Identifier: 1.7.14.8.1.1

Hierarchy Level: 5

Brief Description:

Promote the desired corporate image of the enterprise and its business in the market and industry.

Extended Description:

Promote the desired corporate image for the enterprise and its general business and products. Areas such as sponsorship, corporate-level advertising and general contact with industry bodies, and government and regulatory agencies, are addressed here. Responsible for communicating the required messages to the market and industry about the overall enterprise

Manage Spokespeople

Process Identifier: 1.7.14.8.1.2

Hierarchy Level: 5

Brief Description:

Assign spokespeople for marketing topics and any corporate issues; manage media interactions with spokespeople

Extended Description:

Not used for this process element.

Manage Messaging

Process Identifier: 1.7.14.8.1.3

Hierarchy Level: 5

Brief Description:

Develop specific messages for topics of concern to the enterprise, and manage message release approval, monitor market reaction to messages and implement any necessary changes or adaptations.

Extended Description:

Not used for this process element.

Community Relations Management

Process Identifier: 1.7.14.8.2

Hierarchy Level: 4**Brief Description:**

Ensure the enterprise's position within the community, or communities, within which it operates.

Extended Description:

Community Relations Management processes are responsible for ensuring the enterprise's position within the community, or communities, within which it operates. This includes local activities with, and financial and other support for, schools, libraries, hospitals, emergency services, etc.; concern for the immediate environment; visibility at local events; etc. This area also communicates the desired messages about the enterprise to the community that the enterprise operates within, as well as to employees from a global enterprise standpoint. These processes also handle contact with customer interest groups and customer representatives, as well as dealing with public relations and community relations contacts made to the enterprise. These processes also influence the privacy policy for the enterprise.

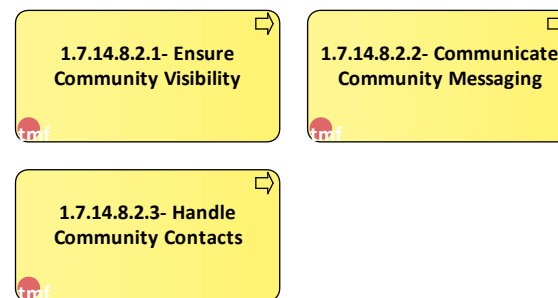

Figure 36: Community Relations Management Children

Ensure Community Visibility

Process Identifier: 1.7.14.8.2.1

Hierarchy Level: 5

Brief Description:

Ensure the enterprise maintains an appropriate and visible presence within the communities where it operates.

Extended Description:

Responsible for ensuring the enterprise's position within the community, or communities, within which it operates. This includes local activities with, and financial and other support for, schools, libraries, hospitals, emergency services, etc.; concern for the immediate environment; visibility at local events; etc.

Communicate Community Messaging

Process Identifier: 1.7.14.8.2.2

Hierarchy Level: 5

Brief Description:

Communicates the desired messages about the enterprise to the community that the enterprise operates within, as well as to employees from a global enterprise standpoint.

Extended Description:

Not used for this process element.

Handle Community Contacts

Process Identifier: 1.7.14.8.2.3

Hierarchy Level: 5

Brief Description:

Handle community and public relations contacts with customer groups, representatives, and other stakeholders.

Extended Description:

Handle contact with customer interest groups and customer representatives, as well as dealing with public relations and community relations contacts made to the enterprise. These processes also influence the privacy policy for the enterprise.

Shareholder Relations Management

Process Identifier: 1.7.14.8.3

Hierarchy Level: 4

Brief Description:

Manage the relationship between the enterprise and its shareholders.

Extended Description:

Shareholder Relations Management processes manage the relationship between the enterprise and its shareholders, consistent with all business, financial, legal, and regulatory requirements. This includes incoming and outgoing communication with shareholders.

Also included in these processes are the management and administration of employee share and/or option plans. Note that the structure and level of employee share and/or option plans is determined within the HR Policies and Practices processes.

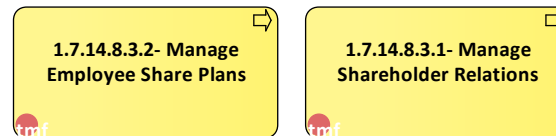

Figure 37: Shareholder Relations Management Children

Manage Employee Share Plans

Process Identifier: 1.7.14.8.3.2

Hierarchy Level: 5

Brief Description:

Management and administration of employee share and/or option plans. Note that the structure and level of employee share and/or option plans is determined within the HR Policies and Practices processes.

Extended Description:

Not used for this process element.

Manage Shareholder Relations

Process Identifier: 1.7.14.8.3.1

Hierarchy Level: 5

Brief Description:

Manage the relationship between the enterprise and its shareholders, consistent with all business, financial, legal, and regulatory requirements. This includes incoming and outgoing communication with shareholders.

Extended Description:

Not used for this process element.

Regulatory Management

Process Identifier: 1.7.14.8.4

Hierarchy Level: 4

Brief Description:

Ensure that the enterprise complies with all existing government regulations

Extended Description:

Regulatory Management processes ensure that the enterprise complies with all existing government regulations. Additionally, this process is responsible for legally influencing pending regulations and statutes for the benefit of the enterprise and to inform the enterprise of potential consequences of pending

legislation or regulations. In addition, these processes are responsible for tariff filings as required.

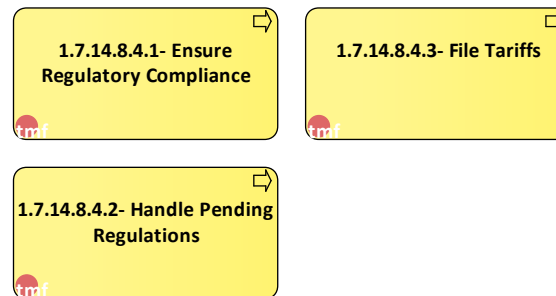

Figure 38: Regulatory Management Children

Ensure Regulatory Compliance

Process Identifier: 1.7.14.8.4.1

Hierarchy Level: 5

Brief Description:

Ensure that the enterprise complies with all existing government regulations.

Extended Description:

Not used for this process element.

File Tariffs

Process Identifier: 1.7.14.8.4.3

Hierarchy Level: 5

Brief Description:

Responsible for tariff filings as required.

Extended Description:

Not used for this process element.

Handle Pending Regulations

Process Identifier: 1.7.14.8.4.2

Hierarchy Level: 5

Brief Description:

Responsible for legally influencing pending regulations and statutes for the benefit of the enterprise and to inform the enterprise of potential consequences of pending legislation or regulations.

Extended Description:

Not used for this process element.

Legal Management

Process Identifier: 1.7.14.8.5

Hierarchy Level: 4**Brief Description:**

Ensure that the enterprise complies with all relevant legal requirements.

Extended Description:

Legal Management processes are responsible for ensuring that the enterprise complies with all relevant legal requirements, including due diligence. They are also responsible for carrying out legal requests within the enterprise, supporting the enterprise by providing legal advice related to business decisions, and proactively notifying the enterprise of relevant changes or trends that can effect the legal environment that the enterprise operates within. These processes deal with any legal action taken on behalf of or against the enterprise.

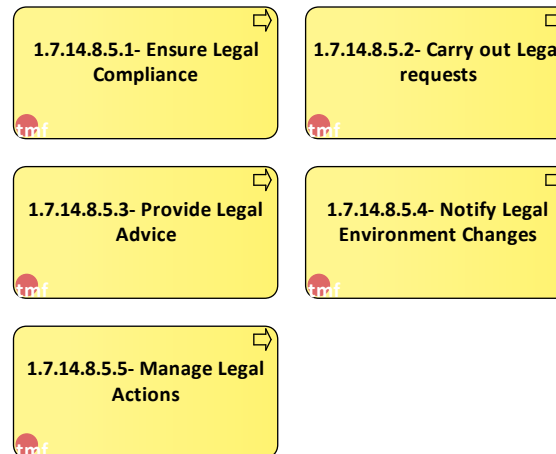

Figure 39: Legal Management Children

Ensure Legal Compliance

Process Identifier: 1.7.14.8.5.1

Hierarchy Level: 5

Brief Description:

Responsible for ensuring that the enterprise complies with all relevant legal requirements, including due diligence.

Extended Description:

Not used for this process element.

Carry out Legal requests

Process Identifier: 1.7.14.8.5.2

Hierarchy Level: 5

Brief Description:

Responsible for carrying out legal requests within the enterprise

Extended Description:

Not used for this process element.

Provide Legal Advice

Process Identifier: 1.7.14.8.5.3

Hierarchy Level: 5

Brief Description:

Responsible for supporting the enterprise by providing legal advice related to business decisions

Extended Description:

Not used for this process element.

Notify Legal Environment Changes

Process Identifier: 1.7.14.8.5.4

Hierarchy Level: 5

Brief Description:

Responsible for proactively notifying the enterprise of relevant changes or trends that can affect the legal environment that the enterprise operates within

Extended Description:

Not used for this process element.

Manage Legal Actions

Process Identifier: 1.7.14.8.5.5

Hierarchy Level: 5

Brief Description:

Deal with any legal action taken on behalf of or against the enterprise.

Extended Description:

Not used for this process element.

Board & Shares/Securities Management

Process Identifier: 1.7.14.8.6

Hierarchy Level: 4

Brief Description:

Manage all activities associated with Board administration and securities regulation.

Extended Description:

The Board & Shares/Securities Management processes manage all activities associated with Board administration and securities regulation. The Board Management processes manage Board related activities, and communication of Board decisions throughout the enterprise as required. Shares/Securities Management manages all activities associated with securities/shares of the enterprise and any securities/company regulations impacting on the company, including the administration and management of continuous disclosure/announcements to the securities exchange and/or securities/company regulator. These processes manage all activities associated with modifying the capital/equity structure of the enterprise, including all logistics functions associated with approaching the market for capital/increased equity. These processes manage and administer the enterprise's share/stock registry.

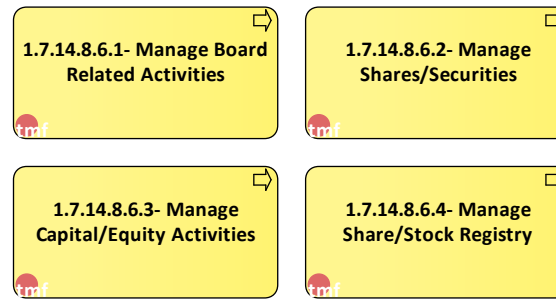

Figure 40: Board & Shares/Securities Management Children

Manage Board Related Activities

Process Identifier: 1.7.14.8.6.1

Hierarchy Level: 5

Brief Description:

Manage Board related activities, and communication of Board decisions throughout the enterprise as required

Extended Description:

Not used for this process element.

Manage Shares/Securities

Process Identifier: 1.7.14.8.6.2

Hierarchy Level: 5

Brief Description:

Manage enterprise shares, securities, and related disclosure and regulatory obligations.

Extended Description:

Manage activities associated with securities/shares of the enterprise and any securities/company regulations impacting on the company, including the administration and management of continuous disclosure/announcements to the securities exchange and/or securities/company regulator.

Manage Capital/Equity Activities

Process Identifier: 1.7.14.8.6.3

Hierarchy Level: 5

Brief Description:

Manage all activities associated with modifying the capital/equity structure of the enterprise, including all logistics functions associated with approaching the market for capital/increased equity.

Extended Description:

Not used for this process element.

Manage Share/Stock Registry

Process Identifier: 1.7.14.8.6.4

Hierarchy Level: 5

Brief Description:

Manage and administer the enterprise's share/stock registry.

Extended Description:

Not used for this process element.

Manage Enterprise Transparency

Process Identifier: 1.7.14.9

Hierarchy Level: 3

Brief Description:

Manage Enterprise Transparency business activity is in charge of enabling open communication and assuring free flow of information and data within the enterprise, and with customers, business partners and all other stakeholders.

Extended Description:

Manage Enterprise Transparency business activity is in charge of enabling open communication and assuring free flow of information and data within the enterprise, and with customers, business partners and all other stakeholders.

Manage Transparency business activity include tasks to Establish Trust and Manage Disclosure of information and data. This is in order to foster the belief in the accuracy, reliability and timely exchanges between the enterprise and customers, business partners, employees and other stakeholders.

Establish Trust

Process Identifier: 1.7.14.9.1

Hierarchy Level: 4

Brief Description:

Establish Trust business activity sets up an environment in the enterprise that foster positive relationships, good judgement with expertise, and maintaining consistency in exchanges across all interactions and experiences.

Extended Description:

Establish Trust business activity sets up an environment in the enterprise that foster positive relationships, good judgement with expertise, and maintaining consistency in exchanges across all interactions and experiences.

Establish Trust business activity supports the enterprise to Manage Transparency by facilitating consistent and open exchanges with customers, business partners, employees and all other stakeholders.

Manage Disclosure

Process Identifier: 1.7.14.9.2

Hierarchy Level: 4

Brief Description:

Manage Disclosure business activity is in charge of directing and controlling the release and publication of facts or information known customers, business partners, employees and other stakeholders (such as investors).

Extended Description:

Manage Disclosure business activity is in charge of directing and controlling the release and publication of facts or information known customers, business partners, employees and other stakeholders (such as investors).

Manage Disclosure business activity includes tasks that consolidate data and information, maintains repository of documents and reports required for statutory reporting (e.g. regulatory filings). Manage Disclosure by enterprises makes customers, investors, and stakeholders involved in doing business with the company aware of pertinent information.

Manage Standards

Process Identifier: 1.7.14.10

Hierarchy Level: 3

Brief Description:

Manage Standards business activity is in charge of controlling and directing all activities that support creating protocols that guide the enterprise in creating, applying and using products and services based on the consensus of all the relevant parties in the industry.

Extended Description:

Manage Standards business activity is in charge of controlling and directing all activities that support creating protocols that guide the enterprise in creating, applying and using products and services based on the consensus of all the relevant parties in the industry.

Manage Standards business activity ensures the safety, interoperability, and compatibility of products and services used by the enterprise and with partners (traditional or ecosystem partners).

Define Standardization Requirement

Process Identifier: 1.7.14.10.1

Hierarchy Level: 4

Brief Description:

Define Standardization Requirement

Manage Standardization Requirement business activity states and describes the needs that must support the development of standards across the enterprise.

Extended Description:

Define Standardization Requirement

Manage Standardization Requirement business activity states and describes the needs that must support the development of standards across the enterprise.

Manage Standardization Requirement supports the Manage Standards business activity by ensuring that there exists the steps and check points that assure there is consensus underpinning the establishment, documenting, analyzing, tracing, prioritizing and agreeing on requirements for standards.

Establish Best Practice Model

Process Identifier: 1.7.14.10.2

Hierarchy Level: 4

Brief Description:

Establish Best Practices Model business activity sets up the generally accepted ideas or methods that are considered superior and documents them along with the results they produce.

Extended Description:

Establish Best Practices Model business activity sets up the generally accepted ideas or methods that are considered superior and documents them along with the results they produce.

Establish Best Practice Model business activities include tasks that describe the representational view or framework that embody the practice and proven solutions that help to address a problem or goals for the best practice. The value behind establishing these best practices model is to identify methods that are confirmed as effective, and reduce the need to 'reinvent the wheel'.

Legitimize Standard

Process Identifier: 1.7.14.10.3

Hierarchy Level: 4

Brief Description:

Legitimize Standard business activity is in charge of approve and allowing a standard to be formally accepted by the enterprise and its business functions.

Extended Description:

Legitimize Standard business activity is in charge of approve and allowing a standard to be formally accepted by the enterprise and its business functions.

Systematize Standards Use

Process Identifier: 1.7.14.10.4

Hierarchy Level: 4

Brief Description:

Systematize Standards Use business activity is in charge of applying, evaluating and managing the lifecycle of standards formally recognized by the enterprise.

Extended Description:

Systematize Standards Use business activity is in charge of applying, evaluating and managing the lifecycle of standards formally recognized by the enterprise.

Manage Integrity

Process Identifier: 1.7.14.11

Hierarchy Level: 3

Brief Description:

Manage Integrity business activity is in charge maintaining the highest ethical standards in every aspect of enterprises' business.

Extended Description:

Manage Integrity business activity is in charge maintaining the highest ethical standards in every aspect of enterprises' business.

Manage Integrity tasks include assessing integrity, responding to integrity assessment, managing ethics, and managing the enterprises' reputation. This business activity will leverage Risk Management in supporting the enterprise governance objectives.

Manage Integrity will provide ongoing and systematized processes to guide behaviors which assure integrity of people, processes and products in the enterprise, and with partners. Code Of Conduct (COC) is one of the fundamental artefacts managed by this business activity.

Remediate Integrity Assessment

Process Identifier: 1.7.14.11.1

Hierarchy Level: 4

Brief Description:

Remediate Integrity Assessment business activity is in charge of responding to findings from the enterprises integrity assessment.

Extended Description:

Remediate Integrity Assessment business activity is in charge of responding to findings from the enterprises integrity assessment.

Assess Integrity

Process Identifier: 1.7.14.11.2

Hierarchy Level: 4

Brief Description:

Assess Integrity business activity is in charge of defining assessment criteria, selecting assessment measures, designing assessment plans, collecting assessment results and interpreting integrity assessment results.

Extended Description:

Assess Integrity business activity is in charge of defining assessment criteria, selecting assessment measures, designing assessment plans, collecting assessment results and interpreting integrity assessment results.

Manage Ethics

Process Identifier: 1.7.14.11.3

Hierarchy Level: 4

Brief Description:

Manage Ethics business activity is in charge of creating, directing and controlling how actions of all internal enterprise stakeholder follow moral values or principles established by the enterprise.

Extended Description:

Manage Ethics business activity is in charge of creating, directing and controlling how actions of all internal enterprise stakeholder follow moral values or principles established by the enterprise.

This business activity is in charge of directing, as well as control enterprise tasks and outcomes that focus on meeting well-defined moral values or principles created. Manage Ethics is a key business activity to support Manage Integrity.

Manage Reputation

Process Identifier: 1.7.14.11.4

Hierarchy Level: 4

Brief Description:

Manage Reputation business activity is in charge of directing and controlling the influence and perception of the enterprise brand.

Extended Description:

Manage Reputation business activity is in charge of directing and controlling the influence and perception of the enterprise brand.

Manage Reputation business activity includes activities that responding to customer, business partner, employee and all other stakeholder feedback, monitoring enterprise reputation, addressing any content or feedback (from employees, customers, business partners and external parties) that can damage the brand. Manage Reputation is a key business activity to support Manage Integrity.

Learning Management

Process Identifier: 1.7.15

Hierarchy Level: 2

Brief Description:

Learning Management business process manage activities that support building skills that can be applied to a variety of context.

Extended Description:

Learning Management business process manage activities that support building skills that can be applied to a variety of context.

Learning Management business process have outcome that results in absorbing information in order to increase skills and abilities and make use of it under a variety of contexts. In contrast to training management, which focuses on the (organization) way to impact information and knowledge to instruct a trainee, learning management is about the persona involved.

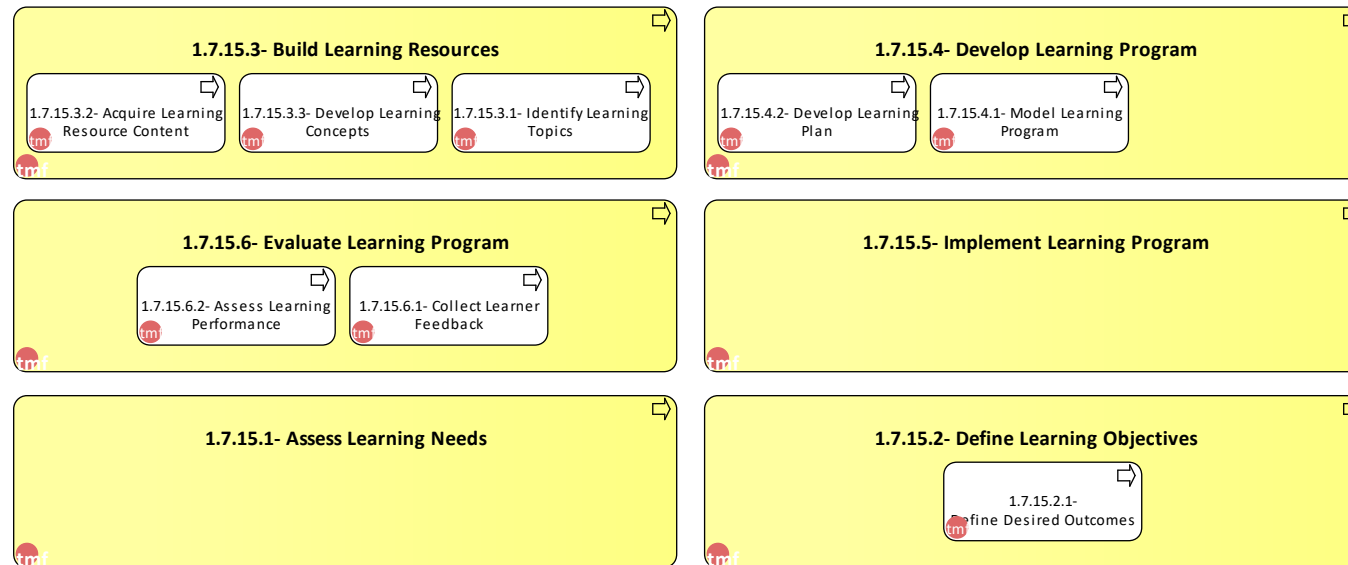

Figure 41: Learning Management Children

Assess Learning Needs

Process Identifier: 1.7.15.1

Hierarchy Level: 3

Brief Description:

Assess Learning Needs business activity analyze and evaluate participants learning needs to identify what participants have learned, how well they learned it and where they struggled.

Extended Description:

Assess Learning Needs business activity analyze and evaluate participants learning needs to identify what participants have learned, how well and where there was struggle. Assess Learning Needs is a key activity in the learning lifecycle management. Learning Need is the gap between the learner's current level of knowledge and skills, and the level of knowledge and skills required to perform a task or a set of tasks. Assess Learning Needs helps to determine target, examine learning goals, and determine learning resources.

Build Learning Resources

Process Identifier: 1.7.15.3

Hierarchy Level: 3

Brief Description:

Build Learning Resources business activity establishes the learning materials or resources that instructors may use to carry out instruction and facilitate the achievement of learning goals.

Extended Description:

Build Learning Resources business activity establishes the learning materials or resources that instructors may use to carry out instruction and facilitate the achievement of learning goals. Build Learning Resources ensures clear learning topics, learning resource content, develops learning concepts, and defines learning plans required to meet learning modes.

Identify Learning Topics

Process Identifier: 1.7.15.3.1

Hierarchy Level: 4

Brief Description:

Identify Learning Topics business activity discover relevant to support a learning objective based on the learners needs assessment outcome.

Extended Description:

Identify Learning Topics business activity discover relevant to support a learning objective based on the learners needs assessment outcome.

Acquire Learning Resource Content

Process Identifier: 1.7.15.3.2

Hierarchy Level: 4

Brief Description:

Acquire Learning Resource Content business activity obtain content relevant to establish curriculum for a Learning Topic.

Extended Description:

Acquire Learning Resource Content business activity obtain content relevant to establish curriculum for a Learning Topic.

Develop Learning Concepts

Process Identifier: 1.7.15.3.3

Hierarchy Level: 4

Brief Description:

Develop Learning Concepts business activity establish and evolve ideas that promote successful learning resource delivery.

Extended Description:

Develop Learning Concepts business activity establish and evolve ideas that promote successful learning resource delivery. This business activity support Training Management by providing methods for training in order to get learners to think about the 'how' and 'why' of learning.

Define Learning Objectives

Process Identifier: 1.7.15.2

Hierarchy Level: 3

Brief Description:

Define Learning Objectives business activity establishes the overall purpose or goal from participating in a learning activity.

Extended Description:

Define Learning Objectives business activity establishes the overall purpose or goal from participating in a learning activity. Define Learning Objectives establish outcomes that capture specifically what knowledge, skills, attitudes a learning program should be able to exhibit following instruction.

Define Learning Objectives include defining desired outcomes (performance, conditions, and criteria), and 'define learning resources'.

Define Desired Outcomes

Process Identifier: 1.7.15.2.1

Hierarchy Level: 4

Brief Description:

Define Desired Outcomes business activity support 'Define Learning Objectives; by establishing the specific performance statement to describe the results after a learning cycle.

Extended Description:

Define Desired Outcomes business activity support 'Define Learning Objectives; by establishing the specific performance statement to describe the results after a learning cycle. Define Desired Outcomes business activity establish performance conditions and criteria that describe what the learner will know or be able to do in specific, measurable terms. Example of a Learning Objective is "Be able to felicitate customer requirements correctly."

Develop Learning Program

Process Identifier: 1.7.15.4

Hierarchy Level: 3

Brief Description:

Develop Learning Program business activity establish the overall initiative and scheme to deliver a learning experience required to achieve competence.

Extended Description:

Develop Learning Program business activity establish the overall initiative and scheme to deliver a learning experience required to achieve competence. Develop Learning Program models and develops the overall learning program to provide trainers/assessors with details about the objectives of learning and assessment; the vocational knowledge, skills or competency that learners are supported to achieve according to an overall program; a profile of the learners and their needs; and suggestions for assessment methods.

Develop Learning Plan

Process Identifier: 1.7.15.4.2

Hierarchy Level: 4

Brief Description:

Develop Learning Plan establishes a the activity schedule that defines how to achieve desired outcomes for a learning objective.

Extended Description:

Develop Learning Plan establishes a the activity schedule that defines how to achieve desired outcomes for a learning objective. Develop Learning Plan ensures clarity so that the progress is orderly and efficient. It includes steps to leverage learning goals as input to identify how individual learning plans may achieve one or several learning goals/objectives. It includes conducting learner assessment, applying learning styles, and when to initiate learning activities to support the goals.

Model Learning Program

Process Identifier: 1.7.15.4.1

Hierarchy Level: 4

Brief Description:

Model Learning Program business activity establish a cohesive and integrated learning process for learners with input from defined learning outcome. Model Learning Program use learning outcomes or the learning objectives (derived from the competency stan

Extended Description:

Model Learning Program business activity establish a cohesive and integrated learning process for learners with input from defined learning outcome. Model Learning Program use learning outcomes or the learning objectives (derived from the competency standards or other criteria) and outline the content, sequence and structure of learning and the delivery and assessment method/s to be used.

Implement Learning Program

Process Identifier: 1.7.15.5

Hierarchy Level: 3

Brief Description:

Implement Learning Program business activity instantiates all the related learning plans and coordinates them under an integrated initiative to support achieving the learning program's experience objective.

Extended Description:

Implement Learning Program business activity instantiates all the related learning plans and coordinates them under an integrated initiative to support achieving the learning program's experience objective. Implement Learning Program implements the individual units of competency and provides the detailed plans for learners to achieve the specified learning outcomes. 'Learning Program' provide 'Training Management' with input for 'Evaluate Training Program'.

Evaluate Learning Program

Process Identifier: 1.7.15.6

Hierarchy Level: 3

Brief Description:

Evaluate Learning Program business activity assess performance of the Learning Program against overall learning objectives.

Extended Description:

Evaluate Learning Program business activity assess performance of the Learning Program against overall learning objectives. Evaluating Learning Program is an ongoing activity that starts with assessing learning program performance needs (collecting learner feedback through performance assessments, and continues to support building learning resources (e.g. designing curricula and learning experiences, facilitating Learning etc.).

Collect Learner Feedback

Process Identifier: 1.7.15.6.1

Hierarchy Level: 4

Brief Description:

Collect Learner Feedback business activity supports 'Evaluate Learning Program' by managing activities that result in receiving information from learners about the learning program.

Extended Description:

Collect Learner Feedback business activity supports 'Evaluate Learning Program' by managing activities that result in receiving information from learners about the learning program.

Assess Learning Performance

Process Identifier: 1.7.15.6.2

Hierarchy Level: 4

Brief Description:

Assess Learning Performance business activity analyzes the learning activities that support a learning program to evaluate levels of understanding of curriculum and content used in learning programs. Assess Learning Performance helps to acquire learning

Extended Description:

Assess Learning Performance business activity analyzes the learning activities that support a learning program to evaluate levels of understanding of curriculum and content used in learning programs. Assess Learning Performance helps to acquire learning performance information from both the learning program, and individual learning plans using any or both of direct and indirect approach.

Training Management

Process Identifier: 1.7.16

Hierarchy Level: 2**Brief Description:**

Training Management business process manage activities that instruct and deliver matters of technical knowledge according to learning management goals.

Extended Description:

Training Management business process manage activities that instruct and deliver matters of technical knowledge according to learning management goals.

Training Management ensures the most effective approach and capability is available to transmit knowledge or information. Training Management is core to the organization being able to match capability and capacity to provide impactful means to the organizations knowledge management goals. The practice of Training Management includes directing and organizing all the training activities for the organization, including assessing training needs, designing the training, implementing the training (such as scheduling and timing the instruction activities, handling training logistics) and evaluating training outcomes against needs.

Figure 42: Training Management Children

Assess Training Needs

Process Identifier: 1.7.16.1

Hierarchy Level: 3

Brief Description:

Assess Training Needs business activity evaluates training gaps and needs, sets training objectives, evaluates roles, prepares plans and identifies place, people, process and technology capacity required to conduct and achieve a specified training objectives

Extended Description:

Assess Training Needs business activity evaluates training gaps and needs, sets training objectives, evaluates roles, prepares plans and identifies place, people, process and technology capacity required to conduct and achieve a specified training objective.

Assess Training Needs lays the necessary groundwork for determining the enterprises needs and how participants in the training will best receive the required training.

Assess Training Needs captures skills proficiency of participants, frequency of skill usage and level of participants skill value to performance.

Output of an Assess Training Need business activity include a map of participant (who) and type of training approach that will be most impactful (how, what, when).

Design Training Program

Process Identifier: 1.7.16.2

Hierarchy Level: 3

Brief Description:

Design Training Program business activity develops the blueprint of capabilities and facilities that achieve training performance goals based on the enterprises learning objectives and knowledge management goals.

Extended Description:

Design Training Program business activity develops the blueprint of capabilities and facilities that achieve training performance goals based on the enterprises learning objectives and knowledge management goals. Design Training Program correlates Learning Management objectives and prior Training Management lessons into training strategies most appropriate for participants. It includes designing the Training Objectives, Developing Training Plan and identifying the type/way/method to implement training (supervised: hands-on; unsupervised: simulation, experiential etc.) that is appropriate and impactful to participants. The output of Design Training activity eradicates the gaps in training and with capabilities and facilities that assure better training performance.

Define Training Objectives

Process Identifier: 1.7.16.2.1

Hierarchy Level: 4

Brief Description:

Define Training Objectives business activity establishes the training program's capabilities and facilities have set objectives that enable develop successful training program.

Extended Description:

Define Training Objectives business activity establishes the training program's capabilities and facilities have set objectives that enable develop successful training program.

Figure 43: Define Training Objectives Children

Develop Training Implementation Method

Process Identifier: 1.7.16.2.1.1

Hierarchy Level: 5

Brief Description:

Develop Training Implementation Method business activity generate the details that support executing the training plan's chosen method.

Extended Description:

Develop Training Implementation Method business activity generate the details that support executing the training plan's chosen method.

Develop Training Evaluation Model

Process Identifier: 1.7.16.2.1.2

Hierarchy Level: 5

Brief Description:

Develop Training Evaluation Model business activity generate the appraisal and rating structure to support the training plan.

Extended Description:

Develop Training Evaluation Model business activity generate the appraisal and rating structure to support the training plan.

Design Training Facility

Process Identifier: 1.7.16.2.1.3

Hierarchy Level: 5

Brief Description:

Design Training Facility business activity defines the specification required to support a training Plan.

Extended Description:

Design Training Facility business activity defines the specification required to support a training Plan.

Develop Training Plan

Process Identifier: 1.7.16.2.2

Hierarchy Level: 4

Brief Description:

Develop Training Plan business activity generate the detailed schedule and sequence of training activities that support achieving the training program.

Extended Description:

Develop Training Plan business activity generate the detailed schedule and sequence of training activities that support achieving the training program.

Acquire Training Capability

Process Identifier: 1.7.16.3

Hierarchy Level: 3

Brief Description:

Acquire Training Capability business activity establishes and makes ready the capability required to support a training plan.

Extended Description:

Acquire Training Capability business activity establishes and makes ready the capability required to support a training plan.

Schedule Training Program

Process Identifier: 1.7.16.4

Hierarchy Level: 3

Brief Description:

Acquire Training Capability business activity establishes and makes ready the capability required to support a training plan.

Extended Description:

Acquire Training Capability business activity establishes and makes ready the capability required to support a training plan.

Implement Training Program

Process Identifier: 1.7.16.5

Hierarchy Level: 3

Brief Description:

Implement Training Program business activity executes training plans altogether to achieve the goals of a training program.

Extended Description:

Implement Training Program business activity executes training plans altogether to achieve the goals of a training program.

Administer Training Program

Process Identifier: 1.7.16.5.2

Hierarchy Level: 4

Brief Description:

Administer Training Program business activity manages the responsibility for the implementation of the training program.

Extended Description:

Administer Training Program business activity manages the responsibility for the implementation of the training program.

Administer Training Program is responsible for the coordination of trainers with training capability and facility. It administers the recordkeeping that tracks training capability, training facility, training participation progress, as well as administrating and budgeting tasks associated with training programs.

Select Training Method

Process Identifier: 1.7.16.5.1

Hierarchy Level: 4

Brief Description:

Select Training Method business activity makes a choice of the method of training to be used in a training program.

Extended Description:

Select Training Method business activity makes a choice of the method of training to be used in a training program. Select Training Method is responsible for guiding selection of the most appropriate training method(s). It takes input from the training assessment activity based on requirements identified between needs and gaps, and recommendations made during the Needs Analysis or training design activities.

Evaluate Training Outcome

Process Identifier: 1.7.16.6

Hierarchy Level: 3

Brief Description:

Evaluate Training Outcome business activity assesses results of training program on participants.

Extended Description:

Evaluate Training Outcome business activity assesses results of training program on participants. Evaluate Training Outcome provides feedback to help identify if training capability and facility achieved intended outcomes. It also helps to make decisions about future training capabilities and facilities.

Monitor Training

Process Identifier: 1.7.16.6.1

Hierarchy Level: 4

Brief Description:

Monitor Training business activity observes and tracks the enterprises training plans and programs.

Extended Description:

Monitor Training business activity observes and tracks the enterprises training plans and programs.

Monitor Training business activity allows the enterprise to maintain control of the training processes, while ensuring proactive adaptive response to the business.

Evaluate Training Program

Process Identifier: 1.7.16.6.2

Hierarchy Level: 4

Brief Description:

Evaluate Training Program business activity assess the enterprises training program support its business goals.

Extended Description:

Evaluate Training Program business activity assess the enterprises training program support its business goals. Evaluate Training Program is the systematic process of collecting information and using that information to improve the enterprises training. Evaluate Training provides feedback to help identify if training programs achieve desired outcomes, and help make decisions about future training programs.

Research Management

Process Identifier: 1.7.17

Hierarchy Level: 2

Brief Description:

Research Management business process administers and controls the activities that support the collection, planning, organization, analysis and delivery of information that increase understanding of topics of concern to the enterprises' business functions.

Extended Description:

Research Management business process administers and controls the activities that support the collection, planning, organization, analysis and delivery of information that increase understanding of topics of concern to the enterprises' business functions. Research Management business processes promote creative and systematic activities that can be undertaken to increase the stock of knowledge. This business process supports 'knowledge management' business process.

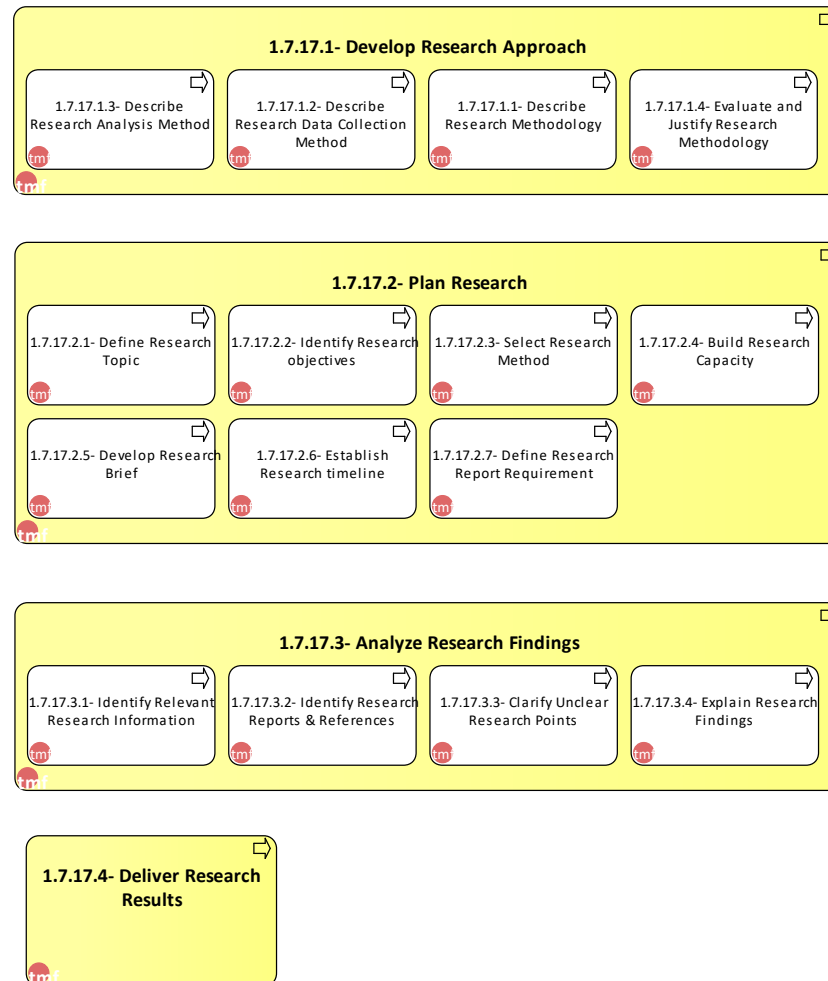

Figure 44: Research Management Children

Develop Research Approach

Process Identifier: 1.7.17.1

Hierarchy Level: 3

Brief Description:

Develop Research Approach business activity describe research methodology, describe data collection method, describe research analysis method, and evaluate and justify research methodology.

Extended Description:

Develop Research Approach business activity describe research methodology, describe data collection method, describe research analysis method, and evaluate and justify research methodology. Develop Research Approach develop the research methodology from broad assumptions to detailed methods of data collection, analysis, and interpretation.

Describe Research Analysis Method

Process Identifier: 1.7.17.1.3

Hierarchy Level: 4

Brief Description:

Describe Research Analysis Method business activity defines the approach that matches the objectives of the research.

Extended Description:

Describe Research Analysis Method business activity defines the approach that matches the objectives of the research. Described Research Analysis Methods cover the tools and procedures used to collect and analyze data (for example, experiments, surveys, and statistical tests).

Describe Research Data Collection Method

Process Identifier: 1.7.17.1.2

Hierarchy Level: 4

Brief Description:

Describe Research Data Collection Method business activity define the research data collect information, and the research data collection sources to provide research insights and answers.

Extended Description:

Describe Research Data Collection Method business activity define the research data collect information, and the research data collection sources to provide research insights and answers. Describe Research Data Collection Method takes an input from 'describe research methodology' to identify the appropriate means sources of data collection, methods of data collection include documents review, observation, questioning, measuring, or a combination of different methods required.

Describe Research Methodology

Process Identifier: 1.7.17.1.1

Hierarchy Level: 4

Brief Description:

Describe Research Methodology business activity define the procedures and techniques that are used to identify, select, process, and analyze information about a research topic.

Extended Description:

Describe Research Methodology business activity define the procedures and techniques that are used to identify, select, process, and analyze information about a research topic. Describe Research Methodology business activity define how a researcher systematically designs a study to ensure valid and reliable results that address the research aims and objectives. Research Methodology describe research strategies, processes flows or techniques that will be utilized in the collection of data or evidence for analysis.

Evaluate and Justify Research Methodology

Process Identifier: 1.7.17.1.4

Hierarchy Level: 4

Brief Description:

Evaluate and Justify Research Methodology business activity assess research method and account for the methodological approach.

Extended Description:

Evaluate and Justify Research Methodology business activity assess research method and account for the methodological approach. Evaluate and Justify Research Methodology begin by introducing overall approach to the research, evaluating the methods of data collection and/or selection, providing analysis on the methods and choices.

Plan Research

Process Identifier: 1.7.17.2

Hierarchy Level: 3

Brief Description:

Plan Research business activity establish the steps needed to be performed in a logical and concise manner.

Extended Description:

Plan Research business activity establish the steps needed to be performed in a logical and concise manner. Plan Research business activity includes tasks that recognize and develop the research topic, perform preliminary research for data, the allocation of capability, appraising data sources and activities to finalize the research.

Define Research Topic

Process Identifier: 1.7.17.2.1

Hierarchy Level: 4

Brief Description:

Define Research Topic business activity describes the subject or issue that a researcher must focus on when conducting research.

Extended Description:

Define Research Topic business activity describes the subject or issue that a researcher must focus on when conducting research. Define Research Topic provides a well-defined research topic as starting point of every successful research project. The choice of a topic is an ongoing process by which researchers explore, define, and refine ideas.

Identify Research objectives

Process Identifier: 1.7.17.2.2

Hierarchy Level: 4

Brief Description:

Identify Research Objectives business activity pinpoint and research goals and targets and discern the focus of research.

Extended Description:

Identify Research Objectives business activity pinpoint and research goals and targets and discern the focus of research. This business activity includes breaking down the research focus into research targets and defining criteria to evaluate research objectives.

Select Research Method

Process Identifier: 1.7.17.2.3

Hierarchy Level: 4

Brief Description:

Select Research Method business activity match the best research method to research objectives.

Extended Description:

Select Research Method business activity match the best research method to research objectives. Select Research Method activity may take input from 'Identify Research Topic' and 'Identify Research Objectives' to understand the best research analysis option (qualitative research, quantitative research a mix of both) to support the research methodology.

Build Research Capacity

Process Identifier: 1.7.17.2.4

Hierarchy Level: 4

Brief Description:

Build Research Capacity business activity develops the abilities and skills enabling the enterprise to perform research.

Extended Description:

Build Research Capacity business activity develops the abilities and skills enabling the enterprise to perform research. Build Research Capacity addresses individual and enterprise-wide research capacity development which leads to higher levels of skills and greater ability to perform research.

Develop Research Brief

Process Identifier: 1.7.17.2.5

Hierarchy Level: 4

Brief Description:

Develop Research Brief business activity builds out the research briefings to provide a concise summary of research knowledge on a particular topic.

Extended Description:

Develop Research Brief business activity builds out the research briefings to provide a concise summary of research knowledge on a particular topic. Develop Research Brief business activity will summarize research evidence in an accessible form to the research audience.

Establish Research timeline

Process Identifier: 1.7.17.2.6

Hierarchy Level: 4

Brief Description:

Establish Research timeline business activity define clear schedules, start and end dates/times for a research plan.

Extended Description:

Establish Research timeline business activity define clear schedules, start and end dates/times for a research plan.

Define Research Report Requirement

Process Identifier: 1.7.17.2.7

Hierarchy Level: 4

Brief Description:

Define Research Report Requirement business activity describe the written or formal outcome of findings and observation of the research.

Extended Description:

Define Research Report Requirement business activity describe the written or formal outcome of findings and observation of the research.

Analyze Research Findings

Process Identifier: 1.7.17.3

Hierarchy Level: 3

Brief Description:

Analyze Research Findings business activity examine the research findings.

Extended Description:

Analyze Research Findings business activity examine the research findings. This business activity breaks research findings down into parts in order to evaluate the insights from the research.

Identify Relevant Research Information

Process Identifier: 1.7.17.3.1

Hierarchy Level: 4

Brief Description:

Identify Relevant Research Information business activity find and discern the right research information to support analyzing for research findings.

Extended Description:

Identify Relevant Research Information business activity find and discern the right research information to support analyzing for research findings.

Identify Research Reports & References

Process Identifier: 1.7.17.3.2

Hierarchy Level: 4

Brief Description:

Identify Research Reports & References business activity capture reports and references that support analyzing research findings.

Extended Description:

Identify Research Reports & References business activity capture reports and references that support analyzing research findings.

Clarify Unclear Research Points

Process Identifier: 1.7.17.3.3

Hierarchy Level: 4

Brief Description:

Clarify Unclear Research Points business activity provide comprehensible information around research points that are need explanation to resolve answers to points around research topics.

Extended Description:

Clarify Unclear Research Points business activity provide comprehensible information around research points that are need explanation to resolve answers to points around research topics.

Explain Research Findings

Process Identifier: 1.7.17.3.4

Hierarchy Level: 4

Brief Description:

Explain Research Findings business activity describe in detail findings from research topics.

Extended Description:

Explain Research Findings business activity describe in detail findings from research topics.

Deliver Research Results

Process Identifier: 1.7.17.4

Hierarchy Level: 3

Brief Description:

Deliver Research Results business activity address modelling research reports for research report recipients with clear insights, ad actionable recommendations for a research.

Extended Description:

Deliver Research Results business activity address modeling research reports for research report recipients with clear insights, ad actionable recommendations for a research.

Corporate Finance Management

Process Identifier: 1.7.18

Hierarchy Level: 2

Brief Description:

Corporate Finance Management business process directs and controls corporate activities that source and allocate funding, organizing capital structure, overseeing activities to increase the value of the firm, and managing the tools used to allocate financial resources.

Extended Description:

Corporate Finance Management business process directs and controls corporate activities that source and allocate funding, organizing capital structure, overseeing activities to increase the value of the firm, and managing the tools used to allocate financial resources.

Corporate Finance Management ensures capital budgets, capital structure, and working capital are managed individually and collectively to maximize the value of the company through its financing and investment decisions, i.e. how to best raise money and use it.

Corporate finance functions are charged with governing and overseeing the enterprises financial activities and capital investment decisions.

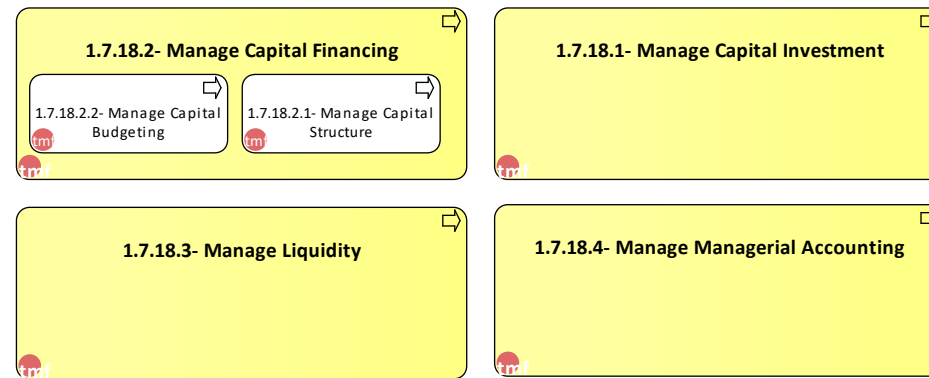

Figure 45: Corporate Finance Management Children

Manage Capital Investment

Process Identifier: 1.7.18.1

Hierarchy Level: 3

Brief Description:

Manage Capital Investment business activity directs and controls corporate expenditure of money to fund the enterprises long-term growth.

Extended Description:

Manage Capital Investment business activity directs and controls corporate expenditure of money to fund the enterprises long-term growth.

Manage Capital Investment can facilitate enterprises acquisition of permanent fixed assets such as real estate and equipment, or provide diversification leveraging Manage Capital Investment business activity. This includes diversification strategies like replacements and modernization.

Manage Capital Financing

Process Identifier: 1.7.18.2

Hierarchy Level: 3

Brief Description:

Manage Capital Financing business activity directs and controls the methods the corporate business uses to raise money.

Extended Description:

Manage Capital Financing business activity directs and controls the methods the corporate business uses to raise money.

Manage Capital Financing covers tasks that manage debt financing (i.e. borrowing money to pay for business operations) an equity financing (i.e. selling ownership stake in the enterprise).

Manage Capital Budgeting

Process Identifier: 1.7.18.2.2

Hierarchy Level: 4

Brief Description:

Manage Capital Budgeting business activity directs and controls the evaluation of prospective investment.

Extended Description:

Manage Capital Budgeting business activity directs and controls the evaluation of prospective investment.

Manage Capital Budgeting helps to map out the cash outlays and cash inflows associated with an investment.

Manage Capital Structure

Process Identifier: 1.7.18.2.1

Hierarchy Level: 4

Brief Description:

Manage Capital Structure business activity directs and controls how the enterprise is financing its operations.

Extended Description:

Manage Capital Structure business activity directs and controls how the enterprise is financing its operations.

Manage Liquidity

Process Identifier: 1.7.18.3

Hierarchy Level: 3

Brief Description:

Manage Liquidity business activity directs and controls corporate visibility into the enterprise cash position.

Extended Description:

Manage Liquidity business activity directs and controls corporate visibility into the enterprise cash position.

Manage Liquidity can be long-term, but for short-term it enables the enterprise to improve decision-making. Visibility into a firm's cash and liquidity position allows corporate treasurers to analyze surplus funds to make better investment and borrowing decisions.

This business activity handles tasks make decisions around working capital and operating cashflows (current assets and current liabilities) in order to avoid disrupting the enterprises business operations. These activities can extend to getting additional credit lines or activating liquidity backups.

Manage Managerial Accounting

Process Identifier: 1.7.18.4

Hierarchy Level: 3

Brief Description:

Manage Managerial Accounting business activity directs, analyzes and communicates financial data to corporate managers who use the information to make business decisions.

Extended Description:

Manage Managerial Accounting business activity directs, analyzes and communicates financial data to corporate managers who use the information to make business decisions.

Enterprise Audit Management

Process Identifier: 1.7.19

Hierarchy Level: 2

Brief Description:

Enterprise Audit Management business activity directs and controls the assessment, evaluation and reporting on the enterprises state of compliance, according to regulations and internal policies, by way of its day-to-day of activities while checking and reporting consistency operating against established directives.

Extended Description:

Manage Enterprise Audit business activity directs and controls the assessment, evaluation and reporting on the enterprises state of compliance, according to regulations and internal policies, by way of its day-to-day of activities while checking and reporting consistency operating against established directives.

Manage Enterprise Audit helps simplify and well-organize the workflow and collaboration process of compiling and reporting of audits and their findings. The business activity provide assurance to senior management and the enterprise Board that the business processes and controls are effective and conform to relevant directives and applicable standards.

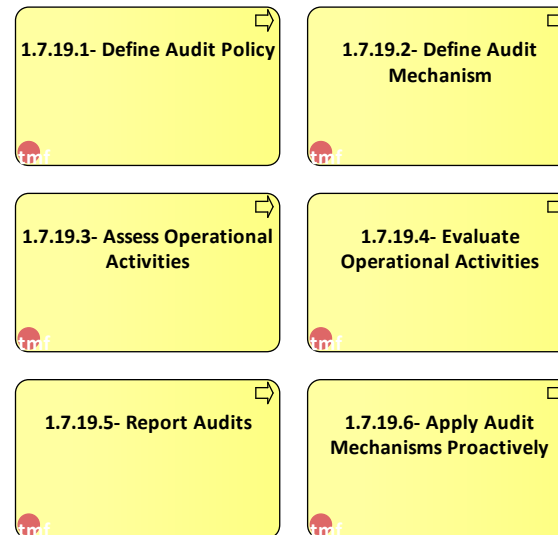

Figure 46: Enterprise Audit Management Children

Define Audit Policy

Process Identifier: 1.7.19.1

Hierarchy Level: 3

Brief Description:

Define the audit policies and procedures

Defines the audit policies and procedures. It will depend on the type of audit like but not limited to Risk audit, Data Management, Data Governance Audit etc.

Extended Description:

Defines the audit policies and procedures. It will depend on the type of audit like but not limited to Risk audit, Data Management, Data Governance Audit etc.

Define Audit Mechanism

Process Identifier: 1.7.19.2

Hierarchy Level: 3

Brief Description:

Define the audit approach to be used depending on the circumstances, as well as the risk assessment methodology and scoring approach to be used. identify, prioritize and manage audit program.

Extended Description:

Define the audit approach to be used depending on the circumstances, as well as the assessment methodology and scoring approach to be used. identify, prioritize and manage audit program .

Assess Operational Activities

Process Identifier: 1.7.19.3

Hierarchy Level: 3

Brief Description:

Assess operational activities to ensure necessary or mandated control structures are in place.

Extended Description:

Assess operational activities to ensure necessary or mandated control structures are in place.

Evaluate Operational Activities

Process Identifier: 1.7.19.4

Hierarchy Level: 3

Brief Description:

Provide an estimate to the extent to which the procedures are followed and are effective.

Extended Description:

Provide an estimate to the extent to which the procedures are followed and are effective.

Report Audits

Process Identifier: 1.7.19.5

Hierarchy Level: 3

Brief Description:

Provide assurance to senior management and the enterprise Board that the enterprise operational processes and controls are effective and conform to relevant adopted standards (which may be externally imposed or internally adopted).

Extended Description:

Provide assurance to senior management and the enterprise Board that the enterprise operational processes and controls are effective and conform to relevant adopted standards (which may be externally imposed or internally adopted). Audit Management processes may be managed by external independent

organizations, or by internal groups within the enterprise, but in either case are designed to support senior management/Board assurance. However, the assurance role of the processes is more related to reactive assessment. The processes ensure that appropriate reports relating to compliance and capability are provided to senior management/Board within appropriate defined timeframes.

Apply Audit Mechanisms Proactively

Process Identifier: 1.7.19.6

Hierarchy Level: 3

Brief Description:

Use audit mechanisms proactively to develop risk assessment methodologies, scoring systems, and advice to operational groups who are responsible for the operations processes.

Extended Description:

Use audit mechanisms proactively to develop assessment methodologies, scoring systems, and advice to operational groups who are responsible for the operations processes.

Enterprise Privacy Management

Process Identifier: 1.7.20

Hierarchy Level: 2

Brief Description:

Manage Enterprise Privacy business activity establish and formalize the enterprise privacy strategy according to the privacy promise of the organization into implementation and operational policies that associate consented policy to all data/information c

Extended Description:

Manage Enterprise Privacy business activity establish and formalize the enterprise privacy strategy according to the privacy promise of the organization into implementation and operational policies that associate consented policy to all data/information collected.

Manage Enterprise Privacy ensure that consented policy are adequately defined based on understanding of all types of data held by the organization on engaged parties, and defines information and data access types, profiles and control decisions that can be operationalized to enforce the privacy promise to customers, business partners and employees.

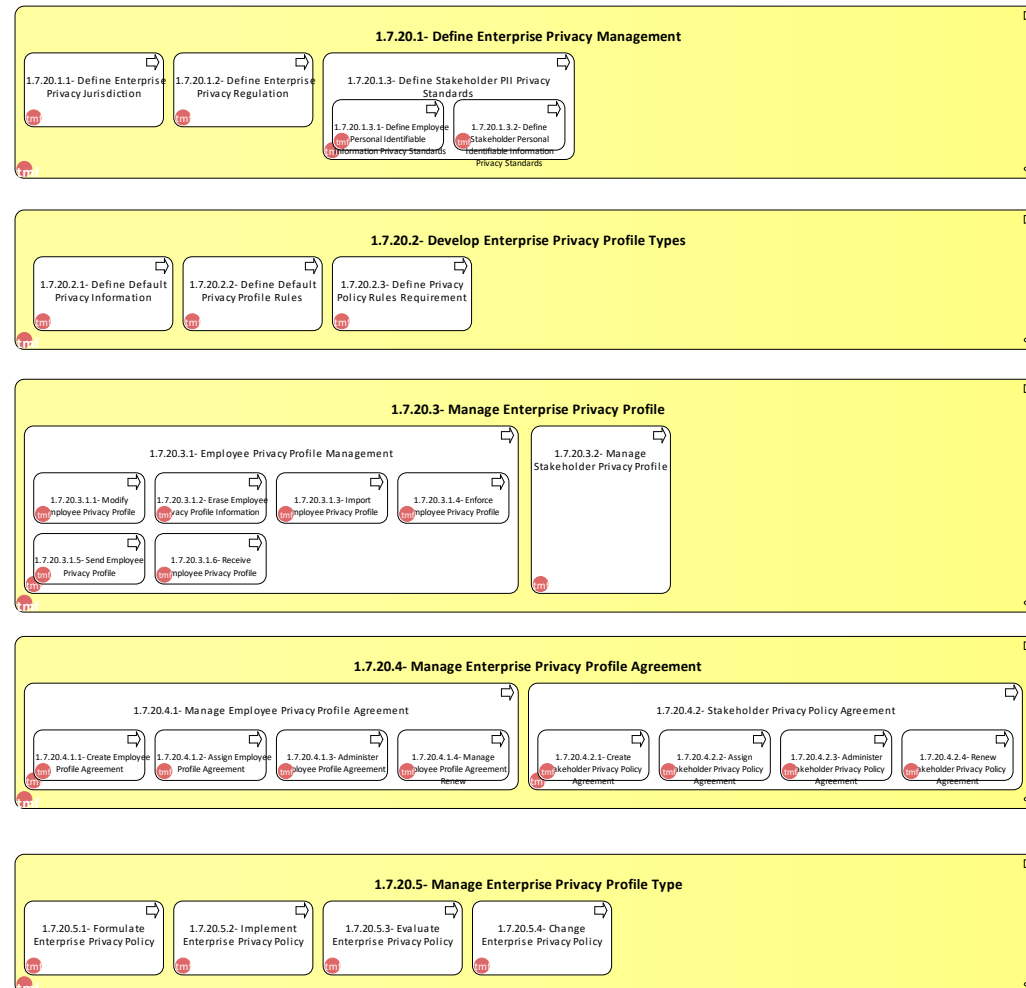

Figure 47: Enterprise Privacy Management Children

Define Enterprise Privacy Management

Process Identifier: 1.7.20.1

Hierarchy Level: 3

Brief Description:

Define Enterprise Privacy Management processes manage the definition of the enterprise privacy management that applies to employees and stakeholders (outside of customers and business partners).

Extended Description:

Define Enterprise Privacy Management Definition processes manage the definition of the enterprise privacy management that applies to employees and stakeholders (outside of customers and business partners).

This process is used to determine the legal expectations of entities that want to apply and use employee or other stakeholder information (such as jurisdiction, location, regulation, and standards).

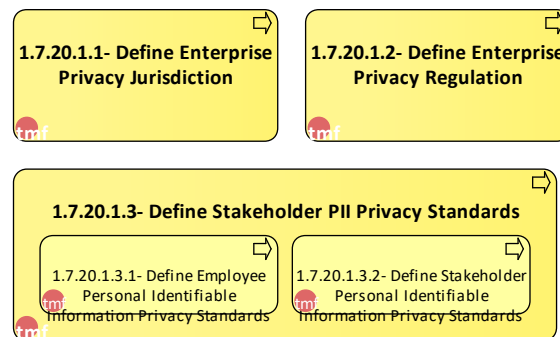

Figure 48: Define Enterprise Privacy Management Children

Define Enterprise Privacy Jurisdiction

Process Identifier: 1.7.20.1.1

Hierarchy Level: 4

Brief Description:

Define Enterprise Privacy Location and Regulation process establish how the relevant privacy regulations must be followed with regards to employees and/or stakeholders.

Extended Description:

Define Enterprise Privacy Location and Regulation process establish how the relevant privacy regulations must be followed with regards to employees and/or stakeholders. This will include the geographical regions where employees/stakeholders operate from/to; and the location of the Data processing entities.

Define Enterprise Privacy Location and Regulation process is used to:

Identify locations (regulatory jurisdiction) impacted by employee and/or stakeholder privacy concerns.

Define the locations where entities processing information related to employees and/or stakeholders will be located

Define the employee and/or stakeholder privacy regulations that apply to locations

Define the dominant regulation

Define the highest standards that apply for multiple legislative locations

Define Enterprise Privacy Regulation

Process Identifier: 1.7.20.1.2

Hierarchy Level: 4

Brief Description:

Define Enterprise Privacy Regulation process establish rules or directives that govern the handling of privacy across the enterprise. This will include coverage of all the geographical regions where engagements happen, and the locations of stakeholders.

Extended Description:

Define Enterprise Privacy Regulation process is used to establish strategic and operating rules that will typically accompany authoritative mechanism for monitoring and enforcing compliance. This will cover the need to:

Identify legislative boundaries and their impact on business/operations.

Define locations for processing of information

Define privacy regulations that apply to locations

Define the dominant regulation

Define the highest standards that apply for multiple legislative locations.

etc.

Define Stakeholder PII Privacy Standards

Process Identifier: 1.7.20.1.3

Hierarchy Level: 4

Brief Description:

Define Stakeholder Personal Identifiable Information Privacy Standards process ensure that privacy standards are applied to Personal Identifiable Information of stakeholder during retention, storage and processing.

Extended Description:

Define Stakeholder Personal Identifiable Information Privacy Standards process ensure that privacy standards are applied to Personal Identifiable Information of stakeholder during retention, storage and processing.

This process ensures definition of Personal Identifiable Information Privacy Standards of:

Shareholders and their responsibilities

Regulatory bodies

etc.

Define Employee Personal Identifiable Information Privacy Standards

Process Identifier: 1.7.20.1.3.1

Hierarchy Level: 5

Brief Description:

Define Employee Personal Identifiable Information Privacy Standards processes ensure that privacy standards are applied to Personal Identifiable Information of employees and/or stakeholders during retention, storage and processing.

Extended Description:

Define Employee Personal Identifiable Information Privacy Standards processes ensure that privacy standards are applied to Personal Identifiable Information of employees and/or stakeholders during retention, storage and processing.

This includes all employee roles, stakeholder roles, 3rd party roles and responsibilities, obligations and privileges associated.

This process ensures definition of Personal Identifiable Information Privacy Standards of:

Employees and their responsibilities

Obligations of all employees

Privileges of all employees

Define Stakeholder Personal Identifiable Information Privacy Standards

Process Identifier: 1.7.20.1.3.2

Hierarchy Level: 5

Brief Description:

Define Stakeholder Personal Identifiable Information Privacy Standards processes ensure that privacy standards are applied to Personal Identifiable Information of employees and/or stakeholders during retention, storage and processing.

Extended Description:

Define Stakeholder Personal Identifiable Information Privacy Standards processes ensure that privacy standards are applied to Personal Identifiable Information of employees and/or stakeholders during retention, storage and processing.

This includes all stakeholder roles and responsibilities, obligations and privileges associated. This process ensures definition of Personal Identifiable Information Privacy Standards of:

Stakeholders and their responsibilities

Obligations of all stakeholders

Privileges of all stakeholders

Develop Enterprise Privacy Profile Types

Process Identifier: 1.7.20.2

Hierarchy Level: 3

Brief Description:

Develop Enterprise Privacy Profile Types process are used to develop the Privacy Profile Type for all engaged party profile types.

Extended Description:

Develop Enterprise Privacy Profile Types process are used to develop the Privacy Profile Types for all engaged party profile types. This includes Information concerned by the Privacy Management, as well as the minimum mandatory requirements that must be enforced for privacy policies to be adhered to.

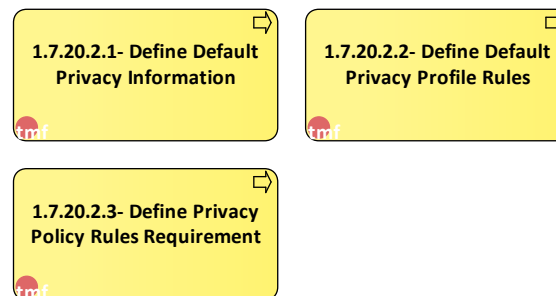

Figure 49: Develop Enterprise Privacy Profile Types Children

Define Default Privacy Information

Process Identifier: 1.7.20.2.1

Hierarchy Level: 4

Brief Description:

Define Default Privacy Information process define the Information pertaining to all engaged parties that must be considered personal identifiable information, and where Privacy Management applies.

Extended Description:

Define Default Privacy Information process identifies the information that can be considered Personal Identifiable Information. Such information may include, but not limited to:

Information explicitly defined for storage.

Information about Service Usage, for example the Product Usage records

Information very specific to a service, such as customer demographic

etc.

Define Default Privacy Profile Rules

Process Identifier: 1.7.20.2.2

Hierarchy Level: 4

Brief Description:

Define Default Privacy Profile Rules process ensure that minimum and mandatory rules are in place to support processing Personally Identifiable Information defined by the Define Default Privacy Information process.

Extended Description:

Define Default Privacy Profile Rules process ensure that minimum mandatory rules are in place to support processing personally identifiable information of customers. This includes:

Internal Purpose Rule (the purpose behind each possible use)

External Purpose Rule (the purpose behind each possible use of a personal identifiable information)

Internal Retention Rule (possible retention times for each personal identifiable information)

External Retention Rule (possible retention times for each personal identifiable information)

Define Privacy Policy Rules Requirement

Process Identifier: 1.7.20.2.3

Hierarchy Level: 4

Brief Description:

Define Privacy Policy Rules Requirement process is used to define the requirements possible for each Privacy Profile Rule (Internal/External Purpose Rules, Internal/External Retention Rules).

Extended Description:

Define Privacy Policy Rules Requirement process is used to define the requirements possible for each Privacy Profile Rule (Internal/External Purpose Rules, Internal/External Retention Rules).

This establishes privacy options available to a customer, which can be engaged through consent.

Manage Enterprise Privacy Profile

Process Identifier: 1.7.20.3

Hierarchy Level: 3

Brief Description:

Manage Enterprise Privacy Profile process is used to handle the life cycle of all enterprise privacy profiles. This process is the organizations activities with any engaged party.

Extended Description:

Manage Enterprise Privacy Profile process is used to handle the life cycle of all enterprise privacy profiles. This process is the organizations activities with any engaged party.

It helps all entities processing data to conform with the organization's privacy policies and the laws & regulation under which it operates.

It encompasses:

The Enforcement of the enterprise Privacy Profiles

Import/export of the Privacy Profile for personal identifiable information received or sent

Modify a Privacy Profile, through engaged party consent

Meet regulatory and legal requirements (such as the demonstration of compliance, the 'right of erasure' or 'right to be forgotten'. etc.)

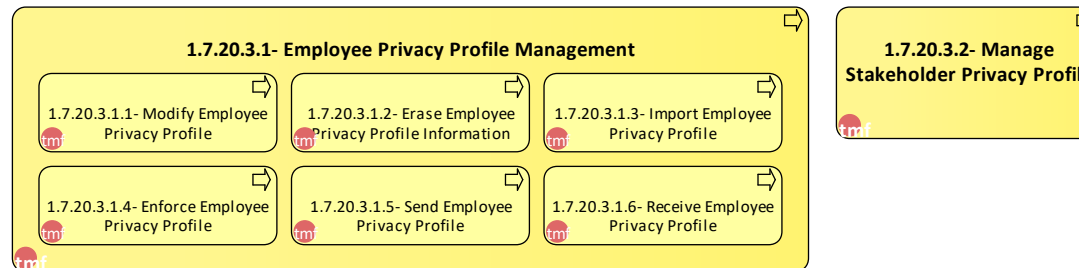

Figure 50: Manage Enterprise Privacy Profile Children

Employee Privacy Profile Management

Process Identifier: 1.7.20.3.1

Hierarchy Level: 4

Brief Description:

Employee Privacy Profile Management process is used to handle the life cycle of employee privacy profiles.

Extended Description:

Employee Privacy Profile Management process is used to handle the life cycle of employee privacy profiles.

It helps to administer processes that ensure that all entities processing data do conform with the organization's privacy policies and the laws & regulation under which it operates.

Modify Employee Privacy Profile

Process Identifier: 1.7.20.3.1.1

Hierarchy Level: 5

Brief Description:

Modify Employee Privacy Profile process is used to modify the rules of privacy profiles following an agreement of a privacy profile between a data processing entity and an employee.

Extended Description:

Modify Employee Privacy Profile process is used to modify the rules of privacy profiles following an agreement of a privacy profile between a data processing entity and an employee.

Such modifications may occur in the Dashboard and honored according to the requirements stipulated by a by privacy policy type.

Erase Employee Privacy Profile Information

Process Identifier: 1.7.20.3.1.2

Hierarchy Level: 5

Brief Description:

Erase Employee Privacy Profile Information process ensures all employee information referenced in the Privacy Profile according to data processing entity rules are erased.

Extended Description:

Erase Employee Privacy Profile Information process ensures all employee information referenced in the Privacy Profile according to data processing entity rules are erased.

It can be done according to employees' request, or retention rules.

Import Employee Privacy Profile

Process Identifier: 1.7.20.3.1.3

Hierarchy Level: 5

Brief Description:

Import Employee Privacy Profile process ingests the privacy profile pre-defined by an employee and integrates it into the privacy profile.

Extended Description:

Import Employee Privacy Profile process ingests the privacy profile pre-defined by an employee and integrates it into the privacy profile.

Enforce Employee Privacy Profile

Process Identifier: 1.7.20.3.1.4

Hierarchy Level: 5

Brief Description:

Enforce Employee Privacy Profile process manages the application of the Employee privacy profile so that any third party processing such data can comply with mandatory legislation, and the agreed wish of the enterprise's employees.

Extended Description:

Enforce Employee Privacy Profile process manages the application of the Employee privacy profile so that any third party processing such data can comply with mandatory legislation, and the agreed wish of the enterprise's employees.

For each action performed by the third party processing personal identifiable information data of the employee, the third party processing such data must ensure their action is compliant with the rules set by default, and validated or amended by the employee.

Send Employee Privacy Profile

Process Identifier: 1.7.20.3.1.5

Hierarchy Level: 5

Brief Description:

Send Employee Privacy Profile process manages the application of privacy policy rules, when personal identifiable information must be sent to a data processing entity.

Extended Description:

Send Employee Privacy Profile process manages the application of privacy policy rules when personal identifiable information must be sent to a data processing entity.

It applies the external rules, then transforms the existing employee privacy profile external rules into internal rules, in order the Data Processor Party can import it into its Privacy Management.

Receive Employee Privacy Profile

Process Identifier: 1.7.20.3.1.6

Hierarchy Level: 5

Brief Description:

Receive Employee Privacy Profile process is used to receive an Employee Profile from a data processing entity.

Extended Description:

Receive Employee Privacy Profile process is used to receive an Employee Profile from a data processing entity.

This process ensures that all the authorization required are agreed by the employee, else a request for changing it will be triggered.

Manage Stakeholder Privacy Profile

Process Identifier: 1.7.20.3.2

Hierarchy Level: 4

Brief Description:

Manage Stakeholder Privacy Profile process is used to handle the life cycle of employee privacy profiles.

Extended Description:

Manage Stakeholder Privacy Profile process is used to handle the life cycle of employee privacy profiles.

It helps to administer processes that ensure that all entities processing data do conform with the organization's privacy policies and the laws & regulation under which it operates.

Manage Enterprise Privacy Profile Agreement

Process Identifier: 1.7.20.4

Hierarchy Level: 3

Brief Description:

Manage Enterprise Privacy Profile Agreement process provides the organization the ability to establish and amend agreements with employees and stakeholder it engages with.

Extended Description:

Manage Enterprise Privacy Profile Agreement process provides the organization the ability to establish and amend agreements with employees and stakeholder it engages with.

This process is used to prove the conformance with Laws & Regulation, particularly showing the explicit consent and information about the Purposes and Retention of any personal identifiable information.

It creates the agreement regarding the privacy management of an employee. In all engagement with employees, an agreement with the privacy policy needs to be acknowledged.

Depending on the flexibility of the personal identifiable information privacy attributes, the employee can agree to some requirement or change them.

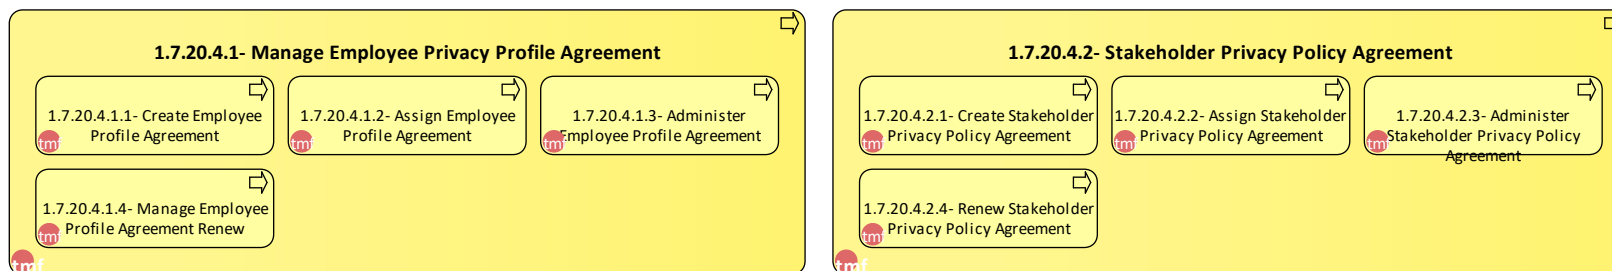

Figure 51: Manage Enterprise Privacy Profile Agreement Children

Manage Employee Privacy Profile Agreement

Process Identifier: 1.7.20.4.1

Hierarchy Level: 4

Brief Description:

Manage Employee Privacy Profile Agreement process provides the organization the ability to establish and amend agreements with employees and stakeholder it engages with.

Extended Description:

Manage Employee Privacy Profile Agreement process provides the organization the ability to establish and amend agreements with employees and stakeholder it engages with.

Create Employee Profile Agreement

Process Identifier: 1.7.20.4.1.1

Hierarchy Level: 5

Brief Description:

Create Employee Profile Agreement process provides the organization the ability to create privacy agreements for employees.

Extended Description:

Create Employee Profile Agreement Creation process provides the organization the ability to create privacy agreements for employees.

Assign Employee Profile Agreement

Process Identifier: 1.7.20.4.1.2

Hierarchy Level: 5

Brief Description:

Assign Employee Profile Agreement Assignment process provides the organization the ability to assign privacy agreements to employees.

Extended Description:

Assign Employee Profile Agreement t Assignment process provides the organization the ability to assign privacy agreements to employees.

Administer Employee Profile Agreement

Process Identifier: 1.7.20.4.1.3

Hierarchy Level: 5

Brief Description:

Administer Employee Profile Agreement process provides the organization the ability to ensure performance privacy agreements by employees.

Extended Description:

Administer Employee Profile Agreement process provides the organization the ability to ensure performance privacy agreements by employees.

Manage Employee Profile Agreement Renew

Process Identifier: 1.7.20.4.1.4

Hierarchy Level: 5

Brief Description:

Manage Employee Profile Agreement Renew process provides the organization the ability to ensure privacy profile agreements are always in effect across tenures.

Extended Description:

Manage Employee Profile Agreement Renew process provides the organization the ability to ensure privacy profile agreements are always in effect across tenures.

Stakeholder Privacy Policy Agreement

Process Identifier: 1.7.20.4.2

Hierarchy Level: 4

Brief Description:

Stakeholder Privacy Policy Agreement process provides the organization the ability to establish and amend agreements with employees and stakeholder it engages with.

Extended Description:

Stakeholder Privacy Policy Agreement process provides the organization the ability to establish and amend agreements with employees and stakeholder it engages with.

Stakeholders covered in here include governments, trade association, shareholders etc.

Create Stakeholder Privacy Policy Agreement

Process Identifier: 1.7.20.4.2.1

Hierarchy Level: 5

Brief Description:

Create Stakeholder Privacy Policy Agreement process provides the organization the ability to create privacy agreements with members or groups without whose support the organization will not be successful.

Extended Description:

Create Stakeholder Privacy Policy Agreement process provides the organization the ability to create privacy agreements with members or groups without whose support the organization will not be successful.

Stakeholders covered in here include governments, trade association, shareholders etc.

Assign Stakeholder Privacy Policy Agreement

Process Identifier: 1.7.20.4.2.2

Hierarchy Level: 5

Brief Description:

Assign Stakeholder Privacy Policy Agreement process provides the organization the ability to assign privacy agreements to stakeholders.

Extended Description:

Assign Stakeholder Privacy Policy Agreement process provides the organization the ability to assign privacy agreements to stakeholders.

Stakeholders covered in here include governments, trade association, shareholders etc.

Administer Stakeholder Privacy Policy Agreement

Process Identifier: 1.7.20.4.2.3

Hierarchy Level: 5

Brief Description:

Administer Stakeholder Privacy Policy Agreement process provides the organization the ability to ensure performance privacy agreements by employees.

Extended Description:

Administer Stakeholder Privacy Policy Agreement process provides the organization the ability to ensure performance privacy agreements by employees.

Stakeholders covered in here include governments, trade association, shareholders etc.

Renew Stakeholder Privacy Policy Agreement

Process Identifier: 1.7.20.4.2.4

Hierarchy Level: 5

Brief Description:

Renew Stakeholder Privacy Policy Agreement process provides the organization the ability to ensure privacy profile agreements are always in effect across tenures.

Extended Description:

Renew Stakeholder Privacy Policy Agreement process provides the organization the ability to ensure privacy profile agreements are always in effect across tenures.

Stakeholders covered in here include governments, trade association, shareholders etc.

Manage Enterprise Privacy Profile Type

Process Identifier: 1.7.20.5

Hierarchy Level: 3

Brief Description:

Manage Enterprise Privacy Profile Type process provides the organization the ability to formulate, implement, evaluate, and change its Privacy Policies in a way that assures it business interests.

Extended Description:

Manage Enterprise Privacy Profile Type process provides the organization the ability to formulate, implement, evaluate, and change its Privacy Policies in a way that assures it business interests.

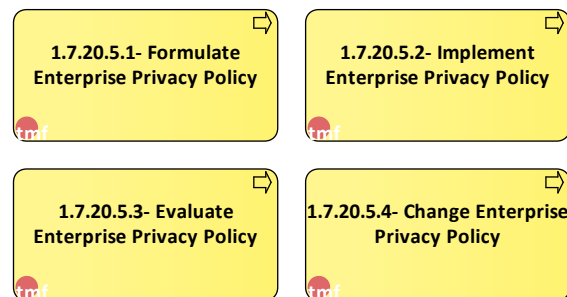

Figure 52: Manage Enterprise Privacy Profile Type Children

Formulate Enterprise Privacy Policy

Process Identifier: 1.7.20.5.1

Hierarchy Level: 4

Brief Description:

Formulate Enterprise Privacy Policy process provides the organization the ability to formulate Privacy Policies in a way that assures it business interests with the understanding and consideration of all statutory and regulatory mandates.

Extended Description:

Formulate Enterprise Privacy Policy process provides the organization the ability to formulate Privacy Policies in a way that assures it business interests with the understanding and consideration of all statutory and regulatory mandates.

Implement Enterprise Privacy Policy

Process Identifier: 1.7.20.5.2

Hierarchy Level: 4

Brief Description:

Implement Enterprise Privacy Policy process provides the organization the ability to put into effect Privacy Policies in a way that assures it business interests with the understanding and consideration of all statutory and regulatory mandates.

Extended Description:

Implement Enterprise Privacy Policy process provides the organization the ability to put into effect Privacy Policies in a way that assures it business interests with the understanding and consideration of all statutory and regulatory mandates.

Evaluate Enterprise Privacy Policy

Process Identifier: 1.7.20.5.3

Hierarchy Level: 4

Brief Description:

Evaluate Enterprise Privacy Policy process provides the organization the ability to collect and analyze information needed to make judgements about contexts, activities, characteristics, or outcomes of privacy policies by virtue of ongoing business needs, and / or impact of external regulations in markets it operates or intends to operate in.

Extended Description:

Evaluate Enterprise Privacy Policy process provides the organization the ability to collect and analyze information needed to make judgements about contexts, activities, characteristics, or outcomes of privacy policies by virtue of ongoing business needs, and / or impact of external regulations in markets it operates or intends to operate in.

Change Enterprise Privacy Policy

Process Identifier: 1.7.20.5.4

Hierarchy Level: 4

Brief Description:

Change Enterprise Privacy Policy process provides the organization the ability to make changes to its privacy policies on an ongoing basis in order to effectively address its business concerns.

Extended Description:

Change Enterprise Privacy Policy process provides the organization the ability to make changes to its privacy policies on an ongoing basis in order to effectively address its business concerns

Enterprise Information Management

Process Identifier: 1.7.21

Hierarchy Level: 2

Brief Description:

Enterprise Information Management business activity controls and oversee the management of information, information and data models, information/data integration, and access to information and data from its creation to retirement, so as to optimize its utility, minimize legal risks, and inform business decisions.

Manage Information business activity is in charge of defining the enterprise plan and approach to direct and control Information and data following a lifecycle from creation to final disposal.

Extended Description:

Enterprise Information Management business activity controls and oversee the management of information, information and data models, information/data integration, and access to information and data from its creation to retirement, so as to optimize its utility, minimize legal risks, and inform business decisions. Manage Information aligns information with business requirements through service levels and management policies for all data types, including master data, reference data, transactional data, metadata, unstructured data, integrated data, and application data exchange. The process involves activities for data acquisition, creation, modeling, storage, maintenance, processing, distribution, disposition, and archival. Manage Information & Data Lifecycle business activity is in charge of defining the enterprise plan and approach to direct and control Information and data following a lifecycle from creation to final disposal.

This process was renamed in 23.5. Old name was Manage Information & Data

in 24.0 this process was changed it was an L4 process and was called Manage Information & Data

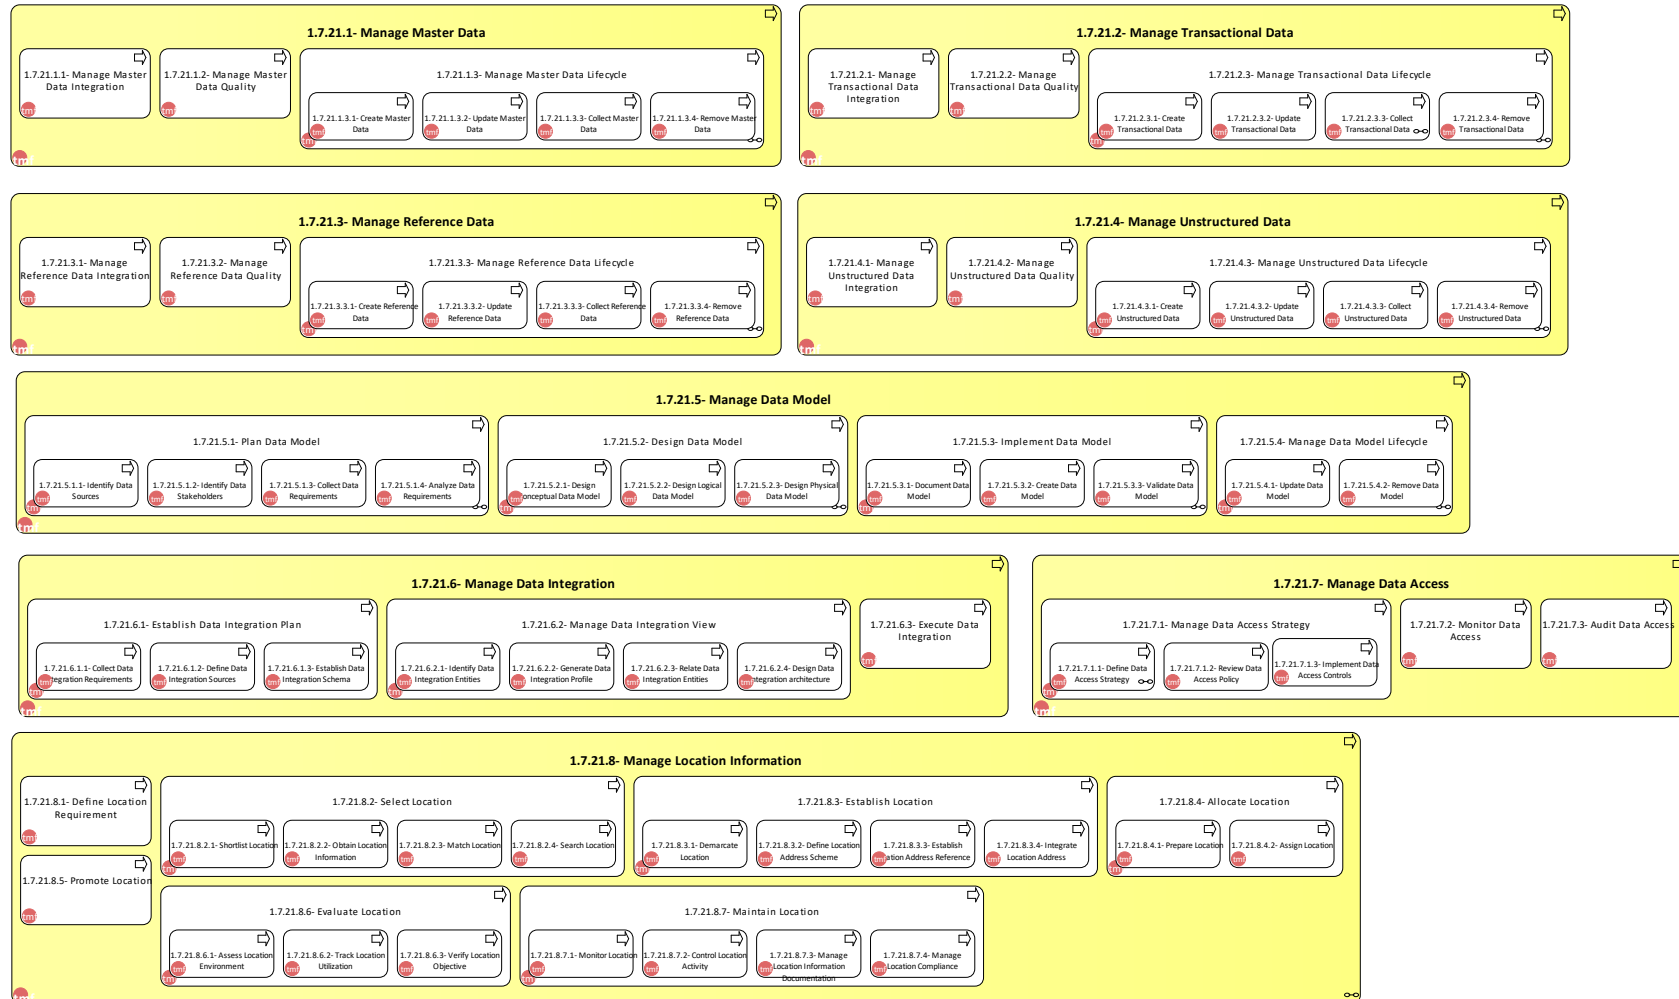

Figure 53: Enterprise Information Management Children

Manage Master Data

Process Identifier: 1.7.21.1

Hierarchy Level: 3

Brief Description:

Manage Master Data business activity directs and controls tasks to create a master record for each entity (person, place, or thing) in a business, from across internal and external data sources and applications.

Extended Description:

Manage Master Data business activity directs and controls tasks to create a master record for each entity (person, place, or thing) in a business, from across internal and external data sources and applications.

Manage Master Data ensures that the enterprise delivers consistent and trusted data to every user, promotes accurate reporting, reduces data errors, removes redundancy, and helps the organization make better-informed business decisions. It creates a master record (also known as a “golden record” or “best version of the truth”) that contains the essential information on which the business/organization relies.

Manage Master Data Integration

Process Identifier: 1.7.21.1.1

Hierarchy Level: 4

Brief Description:

Manage Master Data Integration business activity direct and control tasks to syndicate master data for a harmonized view across all business applications.

Extended Description:

Manage Master Data Integration business activity direct and control tasks to syndicate master data for a harmonized view across all business applications. Manage Master Data Integration ensure that master data is consistently integrated across various systems in an organization with the aim of achieving a coherent enterprise data model with common semantics that can be used to exchange data between business applications. This business activity involves data mapping, transformation, and loading (ETL), data synchronization, conflict resolution, and distributing master data based on a common model for end-to-end process integration.

Manage Master Data Quality

Process Identifier: 1.7.21.1.2

Hierarchy Level: 4

Brief Description:

Manage Master Data Quality business activity direct and control tasks to ensure and improve the accuracy, completeness, and consistency of master data.

Extended Description:

Manage Master Data Quality business activity direct and control tasks to ensure and improve the accuracy, completeness, and consistency of master data.

Manage Master Data Quality ensure the reliability of business decisions made based on the information/data, comply with regulations, and increase operational efficiency. It involves activities such as data profiling, data cleansing, data enrichment, and ongoing data quality monitoring.

Manage Master Data Lifecycle

Process Identifier: 1.7.21.1.3

Hierarchy Level: 4**Brief Description:**

Manage Master Data Lifecycle business activity direct and control tasks to manage the entire lifecycle of master data from creation to retirement.

Extended Description:

Manage Master Data Lifecycle business activity direct and control tasks to manage the entire lifecycle of master data from creation to retirement.

Manage Master Data Lifecycle ensure data relevancy, compliance with data retention policies, and optimize storage resources. It involves activities such as master data creation, master data usage and update, master data archiving, and master data removal/deletion.

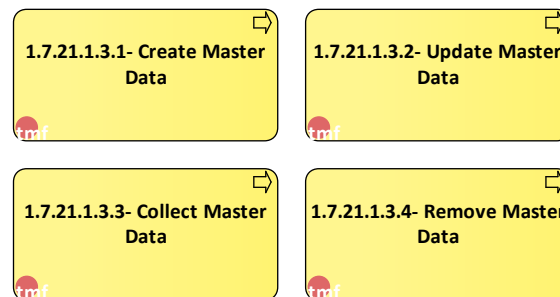

Figure 54: Manage Master Data Lifecycle Children

Create Master Data

Process Identifier: 1.7.21.1.3.1

Hierarchy Level: 5

Brief Description:

Create Master Data business activity is responsible for initiating a new set of master data, and ensuring that new master data is accurate, consistent, and relevant to the business.

Extended Description:

Create Master Data business activity is responsible for initiating a new set of master data, and ensuring that new master data is accurate, consistent, and relevant to the business.

Create Master Data involves identifying master data, evaluating data sources, analyzing metadata, and analyzing underlying master data lifecycle(s) according to business goals.

Update Master Data

Process Identifier: 1.7.21.1.3.2

Hierarchy Level: 5

Brief Description:

Extended Description:

Update Master Data business activity is responsible for making changes to existing master data to ensure it remains accurate and up-to-date.

Update Master Data maintains the integrity of the master data, ensuring it reflects current business realities, and improves business activities and events.

Collect Master Data

Process Identifier: 1.7.21.1.3.3

Hierarchy Level: 5

Brief Description:

Collect Master Data business activity is responsible for gathering master data from various sources.

Extended Description:

Collect Master Data business activity is responsible for gathering master data from various sources.

Collect Master Data ensures data's accuracy, completeness, and relevance to the organization based on a well-defined scope. It involves defining the role of the master data, choosing the data collection method, planning data collection procedures, and collecting the data.

Remove Master Data

Process Identifier: 1.7.21.1.3.4

Hierarchy Level: 5

Brief Description:

Remove Master Data business activity is responsible for deleting or deactivating master data that is no longer needed in order to maintain the relevancy of master data, comply with data retention policies, and optimize storage resources.

Extended Description:

Remove Master Data business activity is responsible for deleting or deactivating master data that is no longer needed in order to maintain the relevancy of master data, comply with data retention policies, and optimize storage resources.

Remove Master Data business activity involves cleaning up to remove or deactivate master data records and disassociating mastership of such data.

Manage Transactional Data

Process Identifier: 1.7.21.2

Hierarchy Level: 3

Brief Description:

Manage Transactional Data business activity directs and controls activities to track and manage business and operations transaction data.

Extended Description:

Manage Transactional Data business activity directs and controls activities to track and manage business and operations transaction data.

Manage Transactional Data ensures that enterprises can understand behavior, understand the context of activity-generated data, track business events or actions and gain insights into business operations.

Manage Transactional Data Integration

Process Identifier: 1.7.21.2.1

Hierarchy Level: 4

Brief Description:

Manage Transactional Data Integration business activity directs and controls tasks to ensure transactional data is consistently integrated across various systems in an organization.

Extended Description:

Manage Transactional Data Integration business activity directs and controls tasks to ensure transactional data is consistently integrated across various systems in an organization.

Manage Transactional Data Integration improves data consistency, reduce redundancy, and ensure that all systems are using the same, most up-to-date version of data.

It includes activities that do data mapping, data transformation, data loading (ETL), data synchronization, and data conflict resolution.

Manage Transactional Data Quality

Process Identifier: 1.7.21.2.2

Hierarchy Level: 4

Brief Description:

Manage Transactional Data Quality business activity direct and control tasks to ensure the accuracy, completeness, and consistency of transactional data.

Extended Description:

Manage Transactional Data Quality business activity direct and control tasks to ensure the accuracy, completeness, and consistency of transactional data.

Manage Transactional Data Quality improve the reliability of business decisions made based on the data, comply with regulations, and increase operational efficiency. It includes activities that perform transactional data profiling, transactional data cleansing, transactional data enrichment, and ongoing transactional data quality monitoring.

Manage Transactional Data Lifecycle

Process Identifier: 1.7.21.2.3

Hierarchy Level: 4

Brief Description:

Manage Transactional Data Lifecycle business activity directs and controls tasks to manage the entire lifecycle of transactional data from creation to retirement.

Extended Description:

Manage Transactional Data Lifecycle ensure transactional data relevancy, comply with data retention policies, and optimize storage resources. Underlying tasks include transactional data creation, transactional data collection and usage, transactional data update, transactional data archiving, and deletion.

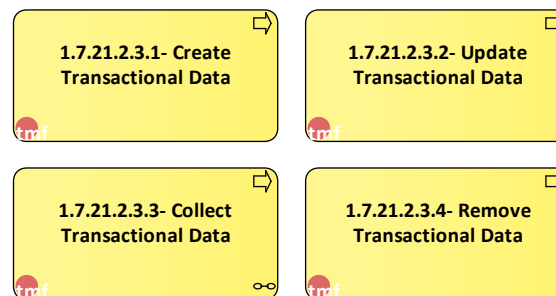

Figure 55: Manage Transactional Data Lifecycle Children

Create Transactional Data

Process Identifier: 1.7.21.2.3.1

Hierarchy Level: 5

Brief Description:

Create Transactional Data business activity is responsible for generating and data entry of new transactional data for storage accurately and in a timely fashion.

Extended Description:

Create Transactional Data business activity is responsible for generating and data entry of new transactional data for storage accurately and in a timely fashion.

Create Transactional Data includes creating new business records, create data for a sales transaction, or any event that needs to be recorded.

Update Transactional Data

Process Identifier: 1.7.21.2.3.2

Hierarchy Level: 5

Brief Description:

Update Transactional Data ensure changes or corrections in the transaction data.

Extended Description:

Update Transactional Data ensure changes or corrections in the transaction data.

Update Transactional Data ensure that changes to transaction data can maintain accuracy and relevance of the underlying transaction.

Collect Transactional Data

Process Identifier: 1.7.21.2.3.3

Hierarchy Level: 5

Brief Description:

Collect Transactional Data business activity is responsible for gathering transactional data for onward processing (analysis and reporting).

Extended Description:

Collect Transactional Data business activity is responsible for gathering transactional data for onward processing (analysis and reporting).

Collect Transactional Data involves extracting transactional data from various sources, transforming it into a suitable format, and loading it into appropriate storage to support decision-making with timely and reliable information.

Remove Transactional Data

Process Identifier: 1.7.21.2.3.4

Hierarchy Level: 5

Brief Description:

Remove Transactional Data business activity is responsible for deleting transactional data that is no longer needed, in compliance with data retention policies and regulations.

Extended Description:

Remove Transactional Data business activity is responsible for deleting transactional data that is no longer needed, in compliance with data retention policies and regulations.

Remove Transactional Data includes optimization of transactional data management performance, and ensuring compliance with data security, retention, and privacy regulations and laws.

Manage Reference Data

Process Identifier: 1.7.21.3

Hierarchy Level: 3

Brief Description:

Manage Reference Data business activity directs and controls tasks to define lookup data (e.g. location data, currency, transaction codes etc) or controlled vocabulary (country names, city names etc.) used to classify and characterize other information and data so as to ensure consistent and continued viability of information / data used for operations and decision making.

Extended Description:

Manage Reference Data business activity directs and controls tasks to define lookup data (e.g. location data, currency, transaction codes etc) or controlled vocabulary (country names, city names etc.) used to classify and characterize other information and data so as to ensure consistent and continued viability of information / data used for operations and decision making.

Manage Reference Data involves managing reference data with technology, such as automating workflows to create new codes and code sets, delivering codes and code sets to data users, and mapping data. Manage Reference Data is required to properly manage reference data e.g. location (Country, City, Town, Street, Street numbers), currency, language codes etc. This process includes tasks to handle information/data collection from public or private sources, potential on-site visits for further controls, history management, etc.)

Manage Reference Data Integration

Process Identifier: 1.7.21.3.1

Hierarchy Level: 4

Brief Description:

Manage Reference Data Integration business activity directs and controls the seamless integration of reference data (such as location, currency, transaction codes, units, etc) across various systems and platforms within an organization.

Extended Description:

Manage Reference Data Integration business activity directs and controls the seamless integration of reference data (such as location, currency, transaction codes, units, etc) across various systems and platforms within an organization.

Manage Reference Data Integration ensures that reference data is consistently and accurately represented across all systems, thereby reducing discrepancies and improving data integrity. Manage Reference Data Integration facilitates efficient data sharing and synchronization across different business units and includes activities that map reference data, consolidate reference data, and establish reference data integration protocols.

Manage Reference Data Quality

Process Identifier: 1.7.21.3.2

Hierarchy Level: 4

Brief Description:

Manage Reference Data Quality business activity directs and controls tasks to maintain and enhance the quality of reference data and information.

Extended Description:

Manage Reference Data Quality business activity directs and controls tasks to maintain and enhance the quality of reference data and information.

Manage Reference Data Quality ensures reference data is accurate, complete, timely, and relevant for the business operations. It improves reference data usage, reduces reference data errors, and enhances operational efficiency through tasks such as reference data validation, reference data cleansing, reference data enrichment, and the implementation of reference data quality metrics and controls.

Manage Reference Data Lifecycle

Process Identifier: 1.7.21.3.3

Hierarchy Level: 4

Brief Description:

Manage Reference Data Lifecycle business activity directs and controls tasks to support the entire lifecycle tasks for reference data management, from creation and maintenance to retirement.

Extended Description:

Manage Reference Data Lifecycle business activity directs and controls tasks to support the entire lifecycle tasks for reference data management, from creation and maintenance to retirement.

Manage Reference Data Lifecycle ensures that reference data remains up-to-date and relevant throughout its lifecycle. It maximizes the value of reference data for the organization while minimizing risks associated with outdated or irrelevant data. It includes reference data creation, reference data maintenance, reference data archiving, and reference data retirement and/or removal.

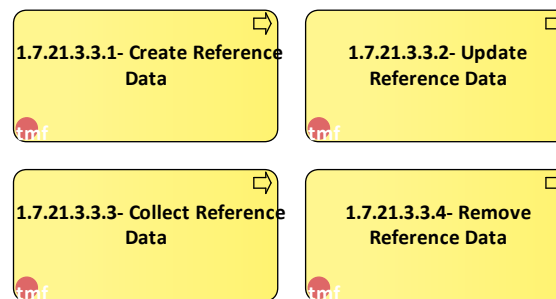

Figure 56: Manage Reference Data Lifecycle Children

Create Reference Data

Process Identifier: 1.7.21.3.3.1

Hierarchy Level: 5

Brief Description:

Create Reference Data business task is responsible for generating new reference data that can be used across various systems and applications within an organization.

Extended Description:

Create Reference Data business task is responsible for generating new reference data that can be used across various systems and applications within an organization.

Create Reference Data ensures that the new reference data is accurate, consistent, and relevant to the business. This involves defining the reference data elements, setting up the reference data structure, and populating reference data.

Update Reference Data

Process Identifier: 1.7.21.3.3.2

Hierarchy Level: 5

Brief Description:

Update Reference Data business task is responsible for making changes to existing reference data to ensure it remains accurate and up-to-date.

Extended Description:

Update Reference Data business task is responsible for making changes to existing reference data to ensure it remains accurate and up-to-date.

Update Reference Data ensures that reference data maintains the integrity of the data, ensure reference data reflects current business realities, and improves the business operations. This includes transactions or developing actions to update reference data.

Collect Reference Data

Process Identifier: 1.7.21.3.3.3

Hierarchy Level: 5

Brief Description:

Collect Reference Data business task activity is responsible for gathering reference data from various sources to be used in the organization.

Extended Description:

Collect Reference Data business task is responsible for gathering reference data from various sources to be used in the organization.

Collect Reference Data ensures that reference data is accurate, complete, and relevant to the organization and its operations. This involves defining the aim of collecting reference data, choosing the reference data collection method, planning reference data collection procedures, and collecting the reference data.

Remove Reference Data

Process Identifier: 1.7.21.3.3.4

Hierarchy Level: 5

Brief Description:

Remove Reference Data business task is responsible for deleting or remove reference data that is no longer needed.

Extended Description:

Remove Reference Data business task is responsible for deleting or remove reference data that is no longer needed.

Remove Reference Data supports the need to maintain the relevancy of the reference data, comply with data retention policies, and optimize data storage resources. This includes reference data cleanup to remove or unlink reference data.

Manage Unstructured Data

Process Identifier: 1.7.21.4

Hierarchy Level: 3

Brief Description:

Manage Unstructured Data business activity directs and control tasks to create, read, update, and remove data that does not have a predefined data model, and extract value from unstructured data using data management platforms.

Extended Description:

Manage Unstructured Data business activity directs and control tasks to create, read, update, and remove data that does not have a predefined data model, and extract value from unstructured data using data management platforms.

Manage Unstructured Data involves using tools and techniques (e.g. artificial intelligence algorithms) to formulate and extract meaning (automatically or manually) from (volumes of) unstructured data.

Manage Unstructured Data Integration

Process Identifier: 1.7.21.4.1

Hierarchy Level: 4

Brief Description:

Manage Unstructured Data Integration business activity directs and control tasks to connect to many different sources of unstructured business/operational data, extract that data, and store it in a suitable destination, such as a data lake or data warehouse.

Extended Description:

Manage Unstructured Data Integration business activity directs and control tasks to connect to many different sources of unstructured business/operational data, extract that data, and store it in a suitable destination, such as a data lake or data warehouse.

Manage Unstructured Data Integration improve the consistency of unstructured data, provide comprehensive unstructured data access, and deliver timely, accurate unstructured data for decision support. This includes extracting reference data from sources, transforming unstructured data to fit operational needs, and loading unstructured data into target (database, data mart, or data warehouse) storage systems.

Manage Unstructured Data Quality

Process Identifier: 1.7.21.4.2

Hierarchy Level: 4

Brief Description:

Manage Unstructured Data Quality is responsible for ensuring high quality and trust of unstructured data across the enterprise.

Extended Description:

Manage Unstructured Data Quality is responsible for ensuring high quality and trust of unstructured data across the enterprise.

Manage Unstructured Data Quality tasks include unstructured data cleansing, unstructured data transformation, and unstructured data integration.

Manage Unstructured Data Lifecycle

Process Identifier: 1.7.21.4.3

Hierarchy Level: 4

Brief Description:

Manage Unstructured Data Lifecycle business activity directs and controls tasks to manage unstructured data/information from the moment it is created and stored, up to the time it is archived or destroyed or considered useful.

Extended Description:

Manage Unstructured Data Lifecycle business activity directs and controls tasks to manage unstructured data/information from the moment it is created and stored, up to the time it is archived or destroyed or considered useful.

Manage Unstructured Data Lifecycle tasks to maintain the confidentiality, integrity, and availability of unstructured data throughout its lifecycle. This includes tasks for unstructured data creation and acquisition, unstructured data retention and protection, and unstructured data retirement.

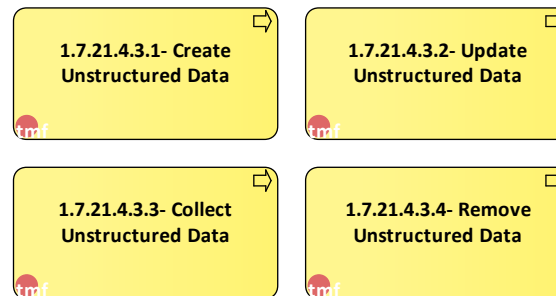

Figure 57: Manage Unstructured Data Lifecycle Children

Create Unstructured Data

Process Identifier: 1.7.21.4.3.1

Hierarchy Level: 5

Brief Description:

Create Unstructured Data task is responsible for generating new unstructured data, and ensuring that new unstructured data is accurate and consistent.

Extended Description:

Create Unstructured Data task is responsible for generating new unstructured data, and ensuring that new unstructured data is accurate and consistent.

Create Unstructured Data involves defining the unstructured data elements, setting up the unstructured data structure, and populating the data.

Update Unstructured Data

Process Identifier: 1.7.21.4.3.2

Hierarchy Level: 5

Brief Description:

Update Unstructured Data task is responsible for making changes to existing unstructured data to ensure it remains accurate and up-to-date.

Extended Description:

Update Unstructured Data task is responsible for making changes to existing unstructured data to ensure it remains accurate and up-to-date.

Update Unstructured Data maintains the integrity of unstructured data, ensuring it reflects current realities, and improves the businesses operations. It involves using transactions or developing custom initiatives to update unstructured data.

Collect Unstructured Data

Process Identifier: 1.7.21.4.3.3

Hierarchy Level: 5

Brief Description:

Collect Unstructured Data task is responsible for gathering unstructured data from various sources to be used in the organization.

Extended Description:

Collect Unstructured Data task is responsible for gathering unstructured data from various sources to be used in the organization.

Collect Unstructured Data ensures unstructured data is accurate, complete, and relevant to the organization. It includes tasks to define the aim of the collecting unstructured data, choosing the unstructured data collection method, planning unstructured data collection procedures, and collecting the unstructured data.

Remove Unstructured Data

Process Identifier: 1.7.21.4.3.4

Hierarchy Level: 5

Brief Description:

Remove Unstructured Data task is responsible for deleting or removing unstructured data that is no longer needed according to the enterprise's data management policies.

Extended Description:

Remove Unstructured Data task is responsible for deleting or removing unstructured data that is no longer needed according to the enterprise's data management policies.

Remove Unstructured Data supports activities to maintain the relevancy of data, comply with data retention policies, and optimize storage resources. This includes unstructured data removal.

Manage Data Model

Process Identifier: 1.7.21.5

Hierarchy Level: 3

Brief Description:

Manage Data Model business activity directs and controls tasks to structure how the organization organizes data elements and standardizes how they relate to one another and to the properties of real-world entities.

Extended Description:

Manage Data Model business activity directs and controls tasks to structure how the organization organizes data elements and standardizes how they relate to one another and to the properties of real-world entities.

Manage Data Model ensure data consistency, data integrity, and data independence by designing data models, implementing and maintaining these models, and evolving them as necessary.

Plan Data Model

Process Identifier: 1.7.21.5.1

Hierarchy Level: 4

Brief Description:

Plan Data Model task is responsible for gathering and analyzing business requirements to enable design a structure for data based on relationship and data properties.

Extended Description:

Plan Data Model task is responsible for gathering and analyzing business requirements to enable design a structure for data based on relationship and data properties.

Plan Data Model will identify the appropriate representation to organize and structure data to support the organization and its business functions. It includes defining business goals for data models, identifying relevant master data, evaluating data sources, analyzing metadata, and analyzing data lifecycle and relationships of data.

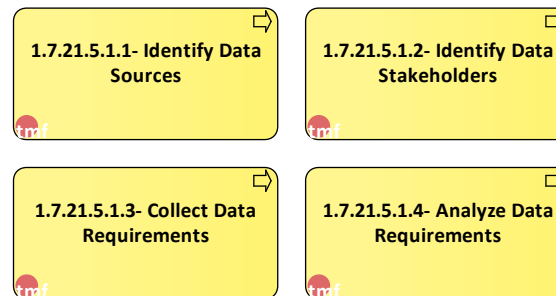

Figure 58: Plan Data Model Children

Identify Data Sources

Process Identifier: 1.7.21.5.1.1

Hierarchy Level: 5

Design Data Model

Process Identifier: 1.7.21.5.2

Hierarchy Level: 4

Brief Description:

Design Data Model task is responsible for creating the structure that organizes data elements and standardizes how they relate to one another and to the properties of real-world entities.

Extended Description:

Design Data Model task is responsible for creating the structure that organizes data elements and standardizes how they relate to one another and to the properties of real-world entities.

Design Data Model ensures data consistency, data integrity, and data independence. It involves designing relationships between data objects/entities, and supporting the implementation and maintenance of data models, and evolving them as necessary.

Implement Data Model

Process Identifier: 1.7.21.5.3

Hierarchy Level: 4

Brief Description:

Implement Data Model task is responsible for executing the plan to realize a data model for the organization and its business operations.

Extended Description:

Implement Data Model task is responsible for executing the plan to realize a data model for the organization and its business operations.

Implement Data Model improves the consistency of describing the relationship between data and providing the relationships validation between data sources.

Manage Data Integration

Process Identifier: 1.7.21.6

Hierarchy Level: 3

Brief Description:

Manage Data Integration business activity directs and controls tasks to combine information/data residing in different sources and provide users with a unified view of the data in order to improve the consistency of data, provide comprehensive data access, and deliver timely, accurate data for decision making.

Extended Description:

Manage Data Integration business activity directs and controls tasks to combine information/data residing in different sources and provide users with a unified view of the data in order to improve the consistency of data, provide comprehensive data access, and deliver timely, accurate data for decision making.

Manage Data Integration involves extracting data from various sources, transforming it to fit operational needs, and loading it into the end target environment (database, data mart, or data warehouse) for further processing.

Establish Data Integration Plan

Process Identifier: 1.7.21.6.1

Hierarchy Level: 4

Brief Description:

Establish Data Integration Plan task is responsible for setting clear objectives for the data integration process and revise it periodically as goals and datasets change.

Extended Description:

Establish Data Integration Plan task is responsible for setting clear objectives for the data integration process and revise it periodically as goals and datasets change.

Establish Data Integration Plan guide the entire data integration process and ensure that its success can be measured and monitored. It involves defining the data integration sources, understanding data integration requirements, and designing the data integration schema or framework.

Collect Data Integration Requirements

Process Identifier: 1.7.21.6.1.1

Hierarchy Level: 5

Brief Description:

Manage Data Integration View

Process Identifier: 1.7.21.6.2

Hierarchy Level: 4

Brief Description:

Manage Data Integration View business activity direct and control tasks to provide a unified view of data by connecting many different sources of data, extracting that data, and presenting it in a suitable destination (such as a data lake or data warehouse).

Extended Description:

Manage Data Integration View business activity direct and control tasks to provide a unified view of data by connecting many different sources of data, extracting that data, and presenting it in a suitable destination (such as a data lake or data warehouse).

Manage Data Integration View involves identifying data integration entities, generating data integration profiles, relating data integration entities and designing data integration architecture. Altogether, this business activity improves the consistency of integrated data while providing a comprehensive view of data across the organization and its business operations.

Identify Data Integration Entities

Process Identifier: 1.7.21.6.2.1

Hierarchy Level: 5

Brief Description:

Extended Description:

TBA

Generate Data Integration Profile

Process Identifier: 1.7.21.6.2.2

Hierarchy Level: 5

Brief Description:

Extended Description:

TBA

Relate Data Integration Entities

Process Identifier: 1.7.21.6.2.3

Hierarchy Level: 5

Brief Description:

Extended Description:

TBA

Design Data Integration architecture

Process Identifier: 1.7.21.6.2.4

Hierarchy Level: 5

Brief Description:

TBA

Extended Description:

TBA

Execute Data Integration

Process Identifier: 1.7.21.6.3

Hierarchy Level: 4

Brief Description:

Execute Data Integration task is responsible for combining data from different sources into a unified view.

Extended Description:

Execute Data Integration task is responsible for combining data from different sources into a unified view.

Execute Data Integration is performed for various purposes, such as data analysis, data warehousing, data migration, data quality improvement, or data synchronization. The task includes identifying the data sources and the target systems, defining data integration rules and mappings, extracting the data from the sources, transforming the data according to the rules and mappings, loading data into the target systems, and verifying data integrity and quality.

Manage Data Access

Process Identifier: 1.7.21.7

Hierarchy Level: 3

Brief Description:

Manage Data Access business activity directs and controls tasks to determine who/what has access to which data assets wherever they may be in order to secure information, define ownership of information/data, and implement managed access controls.

Extended Description:

Manage Data Access business activity directs and controls tasks to determine who/what has access to which data assets wherever they may be in order to secure information, define ownership of information/data, and implement managed access controls.

Manage Data Access tasks involve setting up authentication and authorization mechanisms, managing identities and access permissions, and monitoring and auditing information/data access.

Manage Data Access Strategy

Process Identifier: 1.7.21.7.1

Hierarchy Level: 4

Brief Description:

Manage Data Access Strategy business activity directs and controls tasks to regulate access to data.

Extended Description:

Manage Data Access Strategy business activity directs and controls tasks to regulate access to data.

Manage Data Access Strategy maintains data security, protects personally identifiable information, controls access to critical data assets, and manages permissions. It includes defining who/what has access to which data assets, plans to secure information, definitions of ownership of data, risk models and implementing plans that manage access controls.

Define Data Access Strategy

Process Identifier: 1.7.21.7.1.1

Hierarchy Level: 5

Brief Description:

Extended Description:

Manage Data Access Strategy business activity directs and controls tasks to regulate access to data.

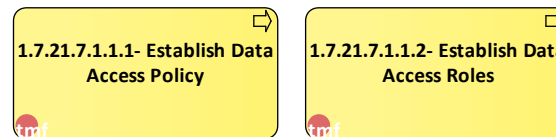

Figure 62: Define Data Access Strategy Children

Establish Data Access Policy

Process Identifier: 1.7.21.7.1.1.1

Hierarchy Level: 6

Brief Description:

Extended Description:

TBA

Establish Data Access Roles

Process Identifier: 1.7.21.7.1.1.2

Hierarchy Level: 6

Brief Description:

Extended Description:

TBA

Review Data Access Policy

Process Identifier: 1.7.21.7.1.2

Hierarchy Level: 5

Brief Description:

Extended Description:

TBA

Implement Data Access Controls

Process Identifier: 1.7.21.7.1.3

Hierarchy Level: 5

Brief Description:

Implement Data Access Controls task is responsible for creating access controls for individuals, organizations, business users, and any other entity that has access to data.

Extended Description:

Implement Data Access Controls task is responsible for creating access controls for individuals, organizations, business users, and any other entity that has access to data.

Implement Data Access Controls secure information, define ownership of data, and implement managed access controls. It includes utilizing risk assessment and execution of access management.

Monitor Data Access

Process Identifier: 1.7.21.7.2

Hierarchy Level: 4

Brief Description:

Monitor Data Access task is responsible for insight into when data is in use, who/what is accessing it, and what data, which data is accessed, and why it is accessed.

Extended Description:

Monitor Data Access task is responsible for insight into when data is in use, who/what is accessing it, and what data, which data is accessed, and why it is accessed.

Monitor Data Access ensures that data is monitored and secured to mitigate risks. It includes observing all business and technical / application-related functions that require data for a smooth and reliable flow of core, supporting and enabling business processes.

Audit Data Access

Process Identifier: 1.7.21.7.3

Hierarchy Level: 4

Brief Description:

Extended Description:

Audit Data Access task is responsible for examining and verifying the accuracy and integrity of access to data.

Audit Data Access ensures that access to data is authorized and valid, compliant with policies and standards, and meets the enterprise's established standards for access. This includes preventing unauthorized access, data breaches, and potential security incidents and having supporting oversight of data/information access management.

Manage Location Information

Process Identifier: 1.7.21.8

Hierarchy Level: 3

Brief Description:

Manage Location Information business activity is responsible for coordinating activities that direct and control physical and/or virtual location information of interest to the organization.

Extended Description:

Manage Location Information business activity is responsible for coordinating activities that direct and control physical and/or virtual location information of interest to the organization. Manage Location Information includes coordinating the tasks that define location requirement, establish location information, allocate location information, promote location, evaluate locations and maintain locations according to the organization's strategic objectives, and operational requirements. These activities ensure efficient utilization of space, resources, and infrastructure, such as managing office spaces, warehouses, retail stores, site, data centers or distribution centers.

Manage Location is a decision-supporting activity that identifies, evaluates, selects and determines the optimal position or place where a use (marketing, sales, customers, products, services and resources) is identified, referenced or situated. This decision-supporting activity will manage location data to enable maximize business value (market share, reduce product/service/resource costs, and enhance customer accessibility).

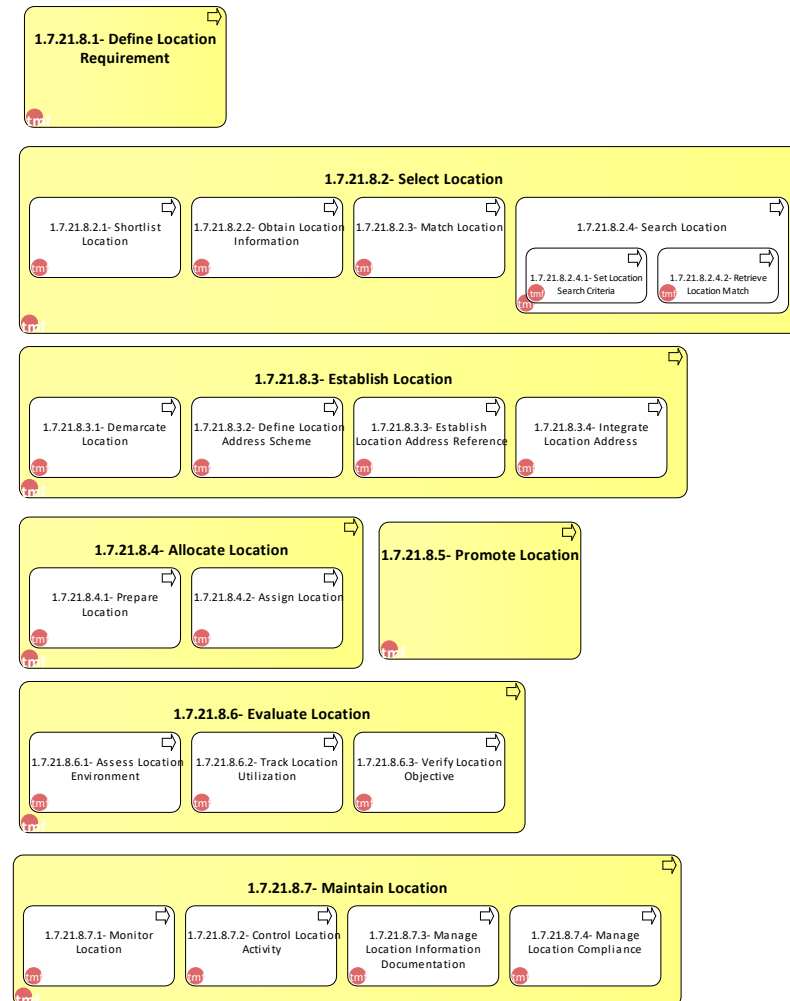

Figure 63: Manage Location Information Children

Define Location Requirement

Process Identifier: 1.7.21.8.1

Hierarchy Level: 4

Brief Description:

“Define Location Requirement task is responsible for identifying and documenting the specific criteria (like specifying the location criteria) that a location must meet to support the organization's operational needs.”

Extended Description:

“Define Location Requirement task is responsible for identifying and documenting the specific criteria (like specifying the location criteria) that a location must meet to support the organization's operational needs.”

Define Location Requirement task supports management of location by setting the considerations and needs, such as location size, location accessibility, relevant location infrastructure, and any proximity to key resources or markets to met a location need.

Select Location

Process Identifier: 1.7.21.8.2

Hierarchy Level: 4

Brief Description:

Select Location task is responsible for choosing the most suitable location based on predefined criteria. Select Location includes tasks that shortlist location, obtain location information, search location and match location.

Extended Description:

Select Location task is responsible for choosing the most suitable location based on predefined criteria. Select Location includes tasks that shortlist location, obtain location information, search location and match location. Select Location supports the location decision-making of the organization when evaluating potential locations against the defined criteria to choose the most suitable location for its operations. This task involves filtering through various locations based on set factors (like budget, location features, and strategic fit) to create a manageable list of location candidates for final consideration.

Shortlist Location

Process Identifier: 1.7.21.8.2.1

Hierarchy Level: 5

Brief Description:

Shortlist Location task is responsible for narrowing down potential locations to a manageable number for in-depth evaluation, based on preliminary assessments against the organization's location requirements.

Extended Description:

Shortlist Location task is responsible for narrowing down potential locations to a manageable number for in-depth evaluation, based on preliminary assessments against the organization's location requirements.

Shortlist Location support location selection by providing the best potential locations from a larger list of locations that are viable to meet the locations purpose.

Obtain Location Information

Process Identifier: 1.7.21.8.2.2

Hierarchy Level: 5

Brief Description:

Shortlist Location task is responsible for narrowing down potential locations to a manageable number for in-depth evaluation, based on preliminary assessments against the organization's location requirements.

Extended Description:

Obtain Location Information task is responsible for gathering the detailed data about potential locations through relevant methods (such as reconnaissance, site visits, and research) to inform the selection process.

Match Location

Process Identifier: 1.7.21.8.2.3

Hierarchy Level: 5

Brief Description:

Match Location task is responsible for comparing shortlist locations with the organization's specific location requirements to identify the best fit for operational needs.

Extended Description:

Match Location task is responsible for comparing shortlist locations with the organization's specific location requirements to identify the best fit for operational needs.

Search Location

Process Identifier: 1.7.21.8.2.4

Hierarchy Level: 5

Brief Description:

Search Location task is responsible for actively exploring and investigating potential sites that could meet the organization's location criteria.

Extended Description:

Search Location task is responsible for actively exploring and investigating potential sites that could meet the organization's location criteria.

Search Location includes tasks to set the location's search criteria, and retrieve all matches that meet the search criteria.

Set Location Search Criteria

Process Identifier: 1.7.21.8.2.4.1

Hierarchy Level: 6

Brief Description:

Set Location Search Criteria task is responsible for establishing the parameters and conditions that potential locations must satisfy during the search process.

Extended Description:

Set Location Search Criteria task is responsible for establishing the parameters and conditions that potential locations must satisfy during the search process.

Set Location Search Criteria task includes actions to identify key factors such as geographic preferences, size requirements, location budget constraints, and specific facility needs that will shape the location search process.

Retrieve Location Match

Process Identifier: 1.7.21.8.2.4.2

Hierarchy Level: 6

Brief Description:

Retrieve Location Match task is responsible for identifying and compiling a list of locations that align with the search criteria set by the organization.

Extended Description:

Retrieve Location Match task is responsible for identifying and compiling a list of locations that align with the search criteria set by the organization.

Retrieve Location Match task includes actions to compile and analyze data on potential locations to present a selection that aligns with the organization's defined needs and preferences.

Establish Location

Process Identifier: 1.7.21.8.3

Hierarchy Level: 4

Brief Description:

Establish Location task is responsible for formalizing the setting up of a location, including legal, logistical, and operational arrangements, to make it functional for the organization's use.

Extended Description:

Establish Location task is responsible for formalizing the setting up of a location, including legal, logistical, and operational arrangements, to make it functional for the organization's use. Establish Location task includes tasks to demarcate location, define location address scheme, establish location address reference, and integrate location. The task ensures the organization can finalize all administrative activities to confirm the existence of a location, such as registry data, lease agreements or purchases, plans for use, and coordinating the logistics of setting up the new location for use.

Demarcate Location

Process Identifier: 1.7.21.8.3.1

Hierarchy Level: 5

Brief Description:

Demarcate Location task is responsible for defining the boundaries (physical and/or virtual) and size of a location to delineate the operational space.

Extended Description:

Demarcate Location task is responsible for defining the boundaries (physical and/or virtual) and size of a location to delineate the operational space.

Demarcate Location task includes actions to map and mark out locations based through zoning/segmentation/spacing etc., ensuring the location meets a spatial requirement. Further more it supports documenting the demarcated details for legal and operational purposes.

Define Location Address Scheme

Process Identifier: 1.7.21.8.3.2

Hierarchy Level: 5

Brief Description:

Define Location Address Scheme task is responsible for creating a systematic approach to assigning addresses within a location to facilitate identification and navigation.

Extended Description:

Define Location Address Scheme task is responsible for creating a systematic approach to assigning addresses within a location to facilitate identification and navigation.

Define Location Address Scheme task includes actions hat develop a logical and systematic addressing system that can be easily understood and used by the organization, customers, suppliers and partners.

Establish Location Address Reference

Process Identifier: 1.7.21.8.3.3

Hierarchy Level: 5

Brief Description:

Establish Location Address Reference tasks is responsible for setting up a system for referencing and cataloging location addresses within the organization.

Extended Description:

Establish Location Address Reference tasks is responsible for setting up a system for referencing and cataloging location addresses within the organization.

Establish Location Address Reference task includes actions to create database or directory that contain all address-related information for a location, ensuring it is accessible and up-to-date for internal and external use.

Integrate Location Address

Process Identifier: 1.7.21.8.3.4

Hierarchy Level: 5

Brief Description:

Integrate Location Address task is responsible for incorporating the address scheme into the organization's broader operational framework.

Extended Description:

Integrate Location Address task is responsible for incorporating the address scheme into the organization's broader operational framework.

Integrate Location Address task includes actions to ensure that the address of locations are consistently used across all business functions and underlying platforms, from mail services to digital maps, applications, location registries and directories.

Allocate Location

Process Identifier: 1.7.21.8.4

Hierarchy Level: 4

Brief Description:

Allocate Location task is responsible for assigning specific spaces/zones/demarcated areas within a location to different functions or individuals based on the organization's needs.

Extended Description:

Allocate Location task is responsible for assigning specific spaces/zones/demarcated areas within a location to different functions or individuals based on the organization's needs.

Allocate Location task includes preparing location through plans, and assigning locations by distributing location areas/zones/spaces to maximize efficiency and meet the organization's operational requirements.

Prepare Location

Process Identifier: 1.7.21.8.4.1

Hierarchy Level: 5

Brief Description:

Prepare Location task is responsible for making necessary adjustments and arrangements to ensure the space/zone/demarcated area corresponding to the location is ready for use.

Extended Description:

Prepare Location task is responsible for making necessary adjustments and arrangements to ensure the space/zone/demarcated area corresponding to the location is ready for use.

Prepare Location task includes tasks such as outfitting the location (with amenities, furniture, equipment, utility access and technology etc.), as well as ensuring compliance with safety and accessibility standards.

Assign Location

Process Identifier: 1.7.21.8.4.2

Hierarchy Level: 5

Brief Description:

Assign Location task involves designating specific areas or spaces within a location to particular functions, teams, or individuals.

Extended Description:

Assign Location task involves designating specific areas or spaces within a location to particular functions, teams, or individuals.

Assign Location task includes actions to determine the best use of location based on the organization and its work flows, and clearly communicating these assignments to all relevant parties.

Promote Location

Process Identifier: 1.7.21.8.5

Hierarchy Level: 4

Brief Description:

Promote Location task is responsible for enhancing the visibility and appeal of a location to attract use.

Extended Description:

Promote Location task is responsible for enhancing the visibility and appeal of a location to attract use.

Promote Location task includes actions to support marketing activities of the location (e.g. Site sharing preparation, and engaging in value driven outreach) so as to highlight the benefits and features of the location.

Evaluate Location

Process Identifier: 1.7.21.8.6

Hierarchy Level: 4

Brief Description:

Evaluate Location task is responsible for assessing the suitability and performance of a location against the organization's objectives and performance criteria.

Extended Description:

Evaluate Location task is responsible for assessing the suitability and performance of a location against the organization's objectives and performance criteria.

Evaluate Location task includes actions to assess location environment, track location utilization, and verify location objective. These tasks enable conduct regular reviews and analyses to determine if the location continues to meet the needs of the organization and suggesting improvements or changes if necessary.

Assess Location Environment

Process Identifier: 1.7.21.8.6.1

Hierarchy Level: 5

Brief Description:

Assess Location Environment task is responsible for examining the adjacent environment (surrounding environment) of a location to ensure it meets organizations assessment criteria (including safety, compliance, and operational standards).

Extended Description:

Assess Location Environment task is responsible for examining the adjacent environment (surrounding environment) of a location to ensure it meets organizations assessment criteria (including safety, compliance, and operational standards).

Assess Location Environment task includes actions for evaluating location factors (such as noise levels, air quality, and proximity to services and amenities etc.) to ensure the location provides a suitable environment for the organization's activities.

Track Location Utilization

Process Identifier: 1.7.21.8.6.2

Hierarchy Level: 5

Brief Description:

Track Location Utilization task is responsible for monitoring how spaces/zones/demarcated areas within a location are being used, and identifying usage patterns or trends.

Extended Description:

Track Location Utilization task is responsible for monitoring how spaces/zones/demarcated areas within a location are being used, and identifying usage patterns or trends.

Track Location Utilization task includes actions for collecting location data such as occupancy, location resource usage, and location traffic flow etc. to inform future allocation and management decisions.

Verify Location Objective

Process Identifier: 1.7.21.8.6.3

Hierarchy Level: 5

Brief Description:

Verify Location Objective task is responsible for confirming that the location meets the strategic and operational goals set out by the organization.

Extended Description:

Verify Location Objective task is responsible for confirming that the location meets the strategic and operational goals set out by the organization.

Verify Location Objective task includes reviewing the location's contribution to the organization's success and ensuring that it supports the overall mission and objectives.

Maintain Location

Process Identifier: 1.7.21.8.7

Hierarchy Level: 4

Brief Description:

Maintain Location task is responsible for ongoing upkeep and to sustain a location to ensure it remains functional and meets organizational standards.

Extended Description:

Maintain Location task is responsible for ongoing upkeep and to sustain a location to ensure it remains functional and meets organizational standards.

Maintain Location task includes actions to monitor location, control location activity, manage location information documentation and manage location compliance. These tasks cover scheduling regular maintenance, addressing need to maintain and update location information promptly and consistently, and updating upstream functions as required to keep the locations and location information in optimal condition.

Monitor Location

Process Identifier: 1.7.21.8.7.1

Hierarchy Level: 5

Brief Description:

Monitor Location task is responsible for regular observation and review of a location to ensure compliance and performance standards are met.

Extended Description:

Monitor Location task is responsible for regular observation and review of a location to ensure compliance and performance standards are met.

Monitor Location task includes actions to conduct inspections, review location usage/access reports, and staying informed about any changes in regulations and/or policies that impact the location's operations.

Control Location Activity

Process Identifier: 1.7.21.8.7.2

Hierarchy Level: 5

Brief Description:

Control Location Activity task is responsible for overseeing and regulating the activities that take place within a location to maintain order and efficiency.

Extended Description:

Control Location Activity task is responsible for overseeing and regulating the activities that take place within a location to maintain order and efficiency.

Control Location Activity task includes managing location activity schedules, coordinating location events, and implementing systems to streamline operations and prevent location usage conflicts or disruptions.

Manage Location Information Documentation

Process Identifier: 1.7.21.8.7.3

Hierarchy Level: 5

Brief Description:

Manage Location Information is responsible for collection, storage, and updates to information (including addresses, registration, titles etc.) of locations within the organization.

Extended Description:

Manage Location Information Documentation is responsible for collection, storage, and updates to information (including addresses, registration, titles etc.) of locations within the organization.

Manage Location Information task includes actions to maintains a database of location information, ensuring location information is accurate and consistent, and making it location information accessible to those who need it through access control measures.

This process was named Manage Location Information, in 25.5 name was amend because of duplicity

Manage Location Compliance

Process Identifier: 1.7.21.8.7.4

Hierarchy Level: 5

Brief Description:

Manage Location Compliance task is responsible for ensuring that all aspects of use of a location continue to adhere to relevant laws, regulations, and organizational policies.

Extended Description:

Manage Location Compliance task is responsible for ensuring that all aspects of use of a location continue to adhere to relevant laws, regulations, and organizational policies.

Manage Location Compliance task includes actions to stay up-to-date with legal requirements, conducting compliance audits, and implementing corrective actions to maintain policy stipulations, as well as legal and regulatory standards for location usage.
