General Information

This document contains the text of the Business Process Framework for context and more information please refer to “GB991 Core Frameworks Concepts and Principles” guidebook.

Preface

eTOM Business Process Framework

The eTOM or Business Process Framework is a reference framework for categorizing all the business activities used by an enterprise involved in delivering on-line Information, Communications and Entertainment services. This is done through definition of each area of business activity, in the form of process components or Process Elements that can be decomposed to expose progressive detail. These process elements can then be positioned within a model to show organizational, functional and other relationships, and can be combined within process flows that trace activity paths through the business.

The eTOM framework can serve as the blueprint for standardizing and categorizing business activities (or process elements) that will help set direction and the starting point for development and integration of Business and Operations Support Systems (BSS and OSS respectively). An important additional application for the eTOM framework is that it helps to support and guide work by TM Forum members and others to develop their solutions. It provides an industry-standard reference point, when considering internal process reengineering needs, partnerships, alliances, and general working agreements with other enterprises, and for suppliers into such enterprises, the eTOM framework outlines potential boundaries of process solutions, and the required functions, inputs, and outputs that must be supported by process solutions.

Introduction

This document contains the main text of eTOM for this domain. It is comprised of decompositions and descriptions of the process elements that make out this domain.

The focus of the Business Process Framework is on the business processes used by service providers, the linkages between these processes, and the use of Market, Product, Customer, Service, Resource, Business Partner, and Enterprise Management related information by multiple processes.

The decomposition starts with a top level process which is a Core Process that details the activity that takes place and describes all subsequent activities that occurs. Thereby this Core Process includes all of the information regarding the activity. Lower level processes also known as Task Processes are then describing a unique path of action and further detail the specific process. This is then repeated to lower level of granularly of up to seven levees.

At the start of each Level 2 process a diagram details all of its sub processes is placed. This diagram showers Level 3 process and the level 4 process below them in boxes where the same level boxes are side by side and the their child processes in side each box. Process that have further decomposition include another box in box diagram of level 5, 6 and 7 process if existing.

Process Associations and IDs

To aid understanding and navigation, each process described here has an associated indication.

Processes have been given a process ID throughout this document. The format of the numbering scheme work as follows:

.b.x.c.d.e where

- b: This digit is used to identify the originator of the process It is set to 1 if the process is the TMF original one, to 2 otherwise so if a company chooses to extended the Business Process Framework it can do so keeping the original numbering and extend as needed.
- x: Digit representing Domain
- c: Digit representing Level 2 process
- d: Digit representing Level 3 process
- e: Digit representing Level 4 process

The unique identifier thus associated with individual processes can thus be used to assist in locating individual processes.

Typographic Conventions

- A Business Process is represented by a *decorator* in form of an arrow located to the top right. A red dot decorator with the initial TMF indicates that this is a TM Forum Business Process. The color yellow background hints to the business layer.

Glossary

Name	Description
ABE	Aggregate Business Entity
BE	Business Entity
eTOM	enhanced Telecom Operation Map (TMF Framework)
ODA	Open Digital Architecture
SID	Shared Information Data model (TMF Framework) is the previous name of Information Framework
TAM	Telecom Applications Map (TMF Framework) is the previous name of Application Framework

Service Domain

Service Domain Main Diagram

Service Strategy Management

Process Identifier: 1.4.1

Hierarchy Level: 2

Brief Description:

Enable the development of a strategic view and a multi-year business plan for the enterprise's services and service directions, and the parties who will supply the required services.

Extended Description:

Service Strategy Management processes enable the development of a strategic view and a multi-year business plan for the enterprise's services and service directions, and the parties who will supply the required services. Research & analysis is performed to determine service targets as well as strategies to reach the defined targets. This research may be obtained from the external market, or developed internally through research programs and activities, or leverage of other internal knowledge. A key input to the service strategy arises from the enterprise's market and product portfolio strategy and forecasts. A focus is placed on the expansion of the existing service capabilities and the identification of new service capabilities required.

These processes deliver and develop annual and multi-year service plans in support of products and offers that include volume forecasts, negotiation for required levels of resources, gaining service development and management as well as supply chain commitment and executive approval for the plans.

Forecasting of service demand, and capturing of new opportunities, are both essential to ensure that the enterprise can implement the services necessary for the future needs of their customers and potential customers.

These processes define the service standards sought, key new service capabilities required, service support levels and approaches required, service design elements to be developed, as well as service cost parameters and targets. These processes also define the policies relating to technical services and their implementation.

This process was renamed in 24.0 Old Name was Service Strategy & Planning

Figure 1: Service Strategy Management Children

Gather & Analyze Service Information

Process Identifier: 1.4.1.1

Hierarchy Level: 3

Brief Description:

Research and analyze customer, technology, competitor and marketing information to identify new service directions and industry best practice, and potential enhancements to existing services

Extended Description:

The Gather & Analyze Service Information processes research and analyze customer, technology, competitor and marketing information to identify new service directions and industry best practice, and potential enhancements to existing services. These processes undertake the necessary analysis to identify potential opportunities, compare current capabilities with the identified opportunities, and as a result of the analysis develop new service requirements. Included in this analysis are the capture and analysis of service growth driven by expansion of housing estates, building developments and building approvals forecasts. The new service requirements include an analysis of the customer value proposition.

These processes include the establishment and management of relationships with external providers of service information, and the management of internal resources used for providing service information.

A key source of input to this analysis is derived from the marketing and product strategy and planning processes.

Gather Service Information

Process Identifier: 1.4.1.1.1

Hierarchy Level: 4

Brief Description:

Establish and Management of external Providers and internal resources for providing service information

Extended Description:

Gather Service information processes focus on establishment and Management of relationships with external providers of service information, and management of internal resources used for providing service information.

Analyze new service directions/enhance existing service

Process Identifier: 1.4.1.1.2

Hierarchy Level: 4

Brief Description:

Analyze to identify new service directions, potential enhancements to existing services

Extended Description:

Analyze new service directions/enhance existing service processes focus on research and analyze customer, technology, competitor and marketing information identify new service directions and industry best practice, and potential enhancements to existing services

Analyze to develop new service requirements

Process Identifier: 1.4.1.1.3

Hierarchy Level: 4

Brief Description:

Develop new service requirements

Extended Description:

Analyze to develop new service requirements processes undertake the responsibility of necessary analysis to identify potential opportunities, compare current capabilities with the identified opportunities, and as result of these analysis develop new service requirements. This process also include an analysis of the customer value proposition.

Analyze service growth

Process Identifier: 1.4.1.1.4

Hierarchy Level: 4

Brief Description:

Capture and analysis of service growth

Extended Description:

Analyze service growth processes capture and analyze service growth which is driven by expansion of housing estates, building developments and building approvals forecasts,

Manage Service Research

Process Identifier: 1.4.1.2

Hierarchy Level: 3

Brief Description:

Manage internally driven research investigations and activities which are used to provide detailed assessment or investigation of new and emerging service capabilities

Extended Description:

The Manage Service Research processes manage internally driven research investigations and activities which are used to provide detailed assessment or investigation of new and emerging service capabilities. The actual research activity may be totally internally delivered, or may be outsourced to external parties to perform the actual research activity. These processes manage the administration of the research activity, management of any research prioritization processes, define the assessment methodologies, administer any actual research contracts with external parties, and develop and manage any intellectual property and patent administration required for the service research activity.

Note that the commercial arrangements with external parties are developed within the Engaged Party domain processes.

Note that the actual legal arrangements, analysis and litigation surrounding intellectual property is managed within the Legal Management processes in the Enterprise Management process area.

Manage service research investigations

Process Identifier: 1.4.1.2.1

Hierarchy Level: 4

Brief Description:

Manage internally driven service research investigations and activities

Extended Description:

Manage service research investigations processes manage internally driven research investigations and activities which are used to provide detailed assessment or investigation of new and emerging service capabilities. The actual research activity may be totally internally delivered , or may be outsourced to external parties.

Manage administration of service research

Process Identifier: 1.4.1.2.2

Hierarchy Level: 4

Brief Description:

Manage administration of service research activity

Extended Description:

Manage administration of service research processes are responsible for managing the administration of service research activities, management of any research prioritization process, administer any actual research contracts with external parties, and develop and manage any intellectual property and patent administration required for the service research activity. Actual commercial arrangements with external parties are managed with in Engaged Party domain Processes. Actual legal arrangements and Intellectual property is managed with Legal Management Processes in Enterprise Management Process areas.

Define service research assessment methodologies

Process Identifier: 1.4.1.2.3

Hierarchy Level: 4

Brief Description:

Define Service research assessment methodologies

Extended Description:

Not used for this process element

Establish Service Strategy & Goals

Process Identifier: 1.4.1.3

Hierarchy Level: 3

Brief Description:

Establish the service strategies based on market trends, future products needs, technical capabilities, and addressing shortcomings in existing service performance and support

Extended Description:

The Establish Service Strategy & Goals processes establish the service strategies based on market trends, future products needs, technical capabilities, and addressing shortcomings in existing service performance and support. These processes accept the changing service requirements and develop appropriate service strategies based on the changing needs of the enterprise, and increasing expectations of the market. They establish realistic service goals for the enterprise and for the products they support. They highlight shortcomings in existing support strategies, including issues associated with resourcing and skill sets.

Establish service strategy

Process Identifier: 1.4.1.3.1

Hierarchy Level: 4

Brief Description:

Establish service strategies based on market trends, highlight shortcomings of service performance and support. Define Objectives from established service strategies.

Extended Description:

Establish service strategy processes are responsible for establishing the service strategies based on markets trends, future products needs, technical capabilities, and addressing shortcomings in existing service performance and support. These processes also highlight issue associated with resourcing and skill sets. The result of this assessment sets the objectives of the service strategy.

Develop Service Strategy

Process Identifier: 1.4.1.3.2

Hierarchy Level: 4

Brief Description:

Accept changing service requirements and develop service strategies.

Extended Description:

Develop Service Strategy processes accept the changing service requirements and develop appropriate service strategies based on the changing needs of enterprise, and increasing expectations of the markets. The service strategy is documented.

Establish Service goals

Process Identifier: 1.4.1.3.3

Hierarchy Level: 4

Brief Description:

Establish realistic service goals for enterprise and products

Extended Description:

Establish Service goals processes focus on establishing realistic service goals for the enterprise and for the products they support.

Determine Service Strategy Perspective

Process Identifier: 1.4.1.3.4

Hierarchy Level: 4

Brief Description:

Provide perspective via vision and mission statements about direction, values, beliefs and purpose of established strategy

Extended Description:

Determine Service Strategy Perspective processes generate Mission and Vision statements. Vision statements lead to service goals and Mission statements indicate the value and purpose that the organization uses to realize its vision.

Formulate Strategic Position

Process Identifier: 1.4.1.3.5

Hierarchy Level: 4

Brief Description:

Form a position to differentiate the organization from other organizations in the same line of business.

Extended Description:

Formulate Strategic Position Processes defines how the organization and the services it provides will be differentiated from other organizations providing similar services in the same industry.

Produce Service Strategic Plan

Process Identifier: 1.4.1.3.6

Hierarchy Level: 4

Brief Description:

Craft a strategic plan to identify how the organization's vision and position are achieved

Extended Description:

Produce Strategic Plan Process describes how the organization will achieve its service objectives, position and vision

Determine Actionable Patterns

Process Identifier: 1.4.1.3.7

Hierarchy Level: 4

Brief Description:

Adopt patterns for auctioning the plan that will achieve service goals and objectives efficiently . Adopt patterns for handling change to allow the strategy to adapt and evolve with the organization and its environment.

Extended Description:

Determine Actionable Patterns processes find efficient and effective patterns of auctioning the plan to achieve goals. These processes also find best patterns for dealing with change in Service Strategy. This allows the Service Strategy to adapt and evolve along with the organization and its environment.

Define Service Support Strategies

Process Identifier: 1.4.1.4

Hierarchy Level: 3

Brief Description:

Define the principles, policies and performance standards for the operational organization providing service support

Extended Description:

The Define Service Support Strategies processes define the principles, policies and performance standards for the operational organization providing service support. Over time, the requirements for service levels and service quality on existing services, and the challenges introduced by new services require changes to the support requirements. These processes define the targets, and operational requirements, in this changing environment. The required performance standards are driven by community expectations, internal process and technology capabilities and competitive offerings. A major input to these processes arises from the Gather & Analyze Service Information processes, and from the product portfolio, resource strategy and market strategy processes. These processes also provide the feedback point from analyses undertaken in the Service Management & Operations process to determine bottlenecks and problems associated with existing service support activities.

Define service support Principles

Process Identifier: 1.4.1.4.1

Hierarchy Level: 4

Brief Description:

Define service support principles for the operational organization providing service support.

Extended Description:

Define Service Support Principles processes define principles for service levels and service quality on existing services or new services

Define service support Policies

Process Identifier: 1.4.1.4.2

Hierarchy Level: 4

Brief Description:

Define service support policies for the operational organization providing service support.

Extended Description:

Define Service Support Policies processes define policies for service levels and service quality on existing services or new services

Define Service Support performance standards

Process Identifier: 1.4.1.4.3

Hierarchy Level: 4

Brief Description:

Define service support performance standards for the operational organization providing service support.

Extended Description:

These processes define the targets, and operational requirements, in this changing environment. The required performance standards are driven by community expectations, internal process and technology capabilities and competitive offerings. These processes also provide the feedback point from analyses undertaken in the Service Management & Operations process to determine bottlenecks and problems associated with existing service support activities. A major input to these processes arises from the Gather & Analyze Service Information processes, and from the product portfolio, resource strategy and market strategy processes.

Produce Service Business Plans

Process Identifier: 1.4.1.5

Hierarchy Level: 3

Brief Description:

Develop and deliver annual and multi-year service plans in support of products and offers

Extended Description:

The Produce Service Business Plans processes develop and deliver annual and multi-year service plans in support of products and offers that include volume forecasts, negotiation for required levels of resources and budgets, gaining service development and management as well as supply chain commitment and executive approval for the plans.

Forecasting of service demand, and capturing of new opportunities, are both essential to ensure that the enterprise can implement the services necessary for the future needs of their customers and potential customers. The processes assess the impacts that new or modified service requirements will cause on the installed service infrastructure and workforce, and supporting resource infrastructure, and establish the functions and benefits that new or modified service will provide to users

These processes identify the timetables and logistics for new service capability introduction.

Develop & Deliver annual/multi year service business plans

Process Identifier: 1.4.1.5.1

Hierarchy Level: 4

Brief Description:

Develop and deliver annual and multi-year service plans, negotiations, approvals , service development and management

Extended Description:

Develop & Deliver annual/multi year service business plans focus on developing and delivering annual and multi-year service plans in support of products and offers that include volume forecasts, negotiation for required levels of resources and budgets, gaining service development and management as well as supply chain commitment and executive approval for the plans.

Forecast service demand & capture new opportunities

Process Identifier: 1.4.1.5.2

Hierarchy Level: 4

Brief Description:

Forecast service demand and capture new opportunities for future needs of new/existing customers

Extended Description:

Forecast service demand & capture new opportunities processes ensures that the enterprise can implement the services necessary for the future needs of their customers and potential customers.

Asses impact of service business plan

Process Identifier: 1.4.1.5.3

Hierarchy Level: 4

Brief Description:

Assess the impacts of new and modified service requirements on systems and establish functions and benefits

Extended Description:

Asses impact of service business plan processes assess the impacts that new or modified service requirements will cause on the installed service infrastructure and workforce, and supporting resource infrastructure, and establish the functions and benefits that new or modified service will provide to users

Identify timetables for new service capability introduction

Process Identifier: 1.4.1.5.4

Hierarchy Level: 4

Brief Description:

Identify timetables for new service capability introduction

Extended Description:

Not used for this process element

Identify logistics for new service capability introduction

Process Identifier: 1.4.1.5.5

Hierarchy Level: 4

Brief Description:

Identify logistics for new service capability introduction

Extended Description:

Not used for this process element

Develop Service Partnership Requirements

Process Identifier: 1.4.1.6

Hierarchy Level: 3

Brief Description:

Identify the requirements for service aspects sourced from other parties, and the service aspects to be delivered internally to the enterprise.

Extended Description:

The Develop Service Partnership Requirements processes identify the requirements for service aspects sourced from other parties, and the service aspects to be delivered internally to the enterprise. The processes determine the extent to which service aspects need to be sourced externally or delivered from internal capabilities, they scan external availability, and make recommendations about the specific external parties who should be used to provide the service aspects.

Note that the processes used to actually source any external parties occur with the Party Development & Management processes.

Identify the requirements for service aspects

Process Identifier: 1.4.1.6.1

Hierarchy Level: 4

Brief Description:

Identify the requirements for service aspects sourced from other parties, and the services aspects to be delivered internally to enterprise

Extended Description:

Not used for this process element

Recommend Service Partnership

Process Identifier: 1.4.1.6.2

Hierarchy Level: 4

Brief Description:

Scan external availability and recommend external parties

Extended Description:

Recommend service partnership processes focus on scanning external availability of sourcing Service aspects and make recommendations about specific parties who should be used to provide the service aspects

Determine extent of service aspect sourcing

Process Identifier: 1.4.1.6.3

Hierarchy Level: 4

Brief Description:

Determine the extent to which service aspects needs to be sourced externally or delivered from internal capabilities

Extended Description:

Not used for this process element

Gain Enterprise Commitment to Service Strategies

Process Identifier: 1.4.1.7

Hierarchy Level: 3

Brief Description:

Gain enterprise commitment to the service strategy and service plans.

Extended Description:

The Gain Commitment to Service Plans processes gain enterprise commitment to the service strategy and service plans. These processes include all aspects of identification of stakeholders and negotiation to gain stakeholder approval.

Identify Stakeholders to service strategy and service plans

Process Identifier: 1.4.1.7.1

Hierarchy Level: 4

Brief Description:

Identify stakeholders of service strategy and service plans

Extended Description:

Not used for this process element

Gain service strategy and service plans Stakeholders approval

Process Identifier: 1.4.1.7.2

Hierarchy Level: 4

Brief Description:

Negotiate & gain stakeholder approval for service strategy and service Plans

Extended Description:

Not used for this process element

Gain Enterprise Commitment to service strategy and service plans

Process Identifier: 1.4.1.7.3

Hierarchy Level: 4

Brief Description:

Gain Enterprise commitment to the service strategy and service plans

Extended Description:

Not used for this process element

Service Test Strategy

Process Identifier: 1.4.1.8

Hierarchy Level: 3

Brief Description:

Service Test Strategy develops the strategies of the enterprise for Service Test.

Extended Description:

Service Test Strategy develops the strategies of the enterprise for Service Test.

This process is in charge of identifying types of Service Test to be conducted according to different context (i.e. business activities) for types of Services.

The different context for Service Test are:

- Service Development & Retirement to qualify the capacity to deliver Services before validating a new ServiceSpecification
- Service Configuration & Activation to test the Service before closing the ServiceOrderItem
- Service Quality Management to test Service Quality
- Service Problem Management to test Service functioning
- Service Test Management to conduct tests not specific to a customer's product

Analyze Service Test Quality

Process Identifier: 1.4.1.9

Hierarchy Level: 3

Brief Description:

Analyze Service Test Quality process performs quality analysis of service testing processes, in order to continuously fine-tune and improve them.

Extended Description:

Analyze Service Test Quality process performs quality analysis of service testing processes, in order to continuously fine-tune and improve them.

Service Test Quality Analysis processes provide an offline analysis of the performance of service testing processes to ensure their continuous fitness for purpose, and eventually propose modifications or enhancements to the current service test specifications (including: service testing methods, quota, authorized users, recommendations and course of action if needed).

The analysis is done using statistical service test usage data to evaluate service tests performance and required improvements if needed.

Following the analysis, typical course of action can be:

- No changes needed currently,
- Creation of additional service tests,
- Improving existing service tests,
- Removing service tests that are no longer relevant.

Service Capability Delivery

Process Identifier: 1.4.2

Hierarchy Level: 2

Brief Description:

Plan and deliver the total capabilities required to deliver changes to service.

Extended Description:

Service Capability Delivery processes plan and deliver the total capabilities required to deliver changes to service, as necessary. This involves integration of capability delivered from within the enterprise, and capability delivered from an external party.

Service demand forecasting and capturing of new opportunities, are both essential to ensure that the enterprise can implement the services necessary for the future needs of their customers and potential customers.

Figure 2: Service Capability Delivery Children

Map & Analyze Service Requirements

Process Identifier: 1.4.2.1

Hierarchy Level: 3

Brief Description:

Define the detailed service infrastructure requirements to support the product capabilities required by the enterprise.

Extended Description:

The Map & Analyze Service Requirements processes define the detailed service infrastructure requirements to support the product capabilities required by the enterprise. The processes provide detailed analysis of new service demand forecasts linked to service relevant geographic distributions. The processes also establish the detailed performance requirements. These processes take the forecast information available from the Produce Service Business Plans and requirements information from the Define Product Capability Requirements processes, as well as service infrastructure requirements developed by the Develop Detailed Service Specifications processes, to establish detailed views of anticipated service demand and performance requirements.

The processes include any interaction with cross-enterprise coordination and management functions to ensure that the demand distributions capture the needs of all stakeholders.

These processes provide input into the requirements capture processes in the Resource and Engaged party domains

Capture Service Demand & Performance Requirements

Process Identifier: 1.4.2.1.1

Hierarchy Level: 4

Brief Description:

Capture detailed service demand, performance, and infrastructure requirements to support service capabilities.

Extended Description:

These processes provide detailed analysis of new service demand forecasts linked to service relevant geographic distributions. The processes also establish the detailed performance requirements. These processes take the forecast information available from the Produce Service Business Plans and requirements information from the Define Product Capability Requirements processes, as well as service infrastructure requirements developed by the Develop Detailed Service Specifications processes, to establish detailed views of anticipated service demand and performance requirements. These processes define the detailed infrastructure requirements to support the marketing strategies and forecasts. These processes provide requirements, including process performance targets, for the development of new and/or enhancement of existing marketing infrastructure which are captured by this process.

Agree Service Infrastructure Requirements

Process Identifier: 1.4.2.1.2

Hierarchy Level: 4

Brief Description:

Obtain agreement on detailed service infrastructure requirements and stakeholder needs.

Extended Description:

These processes obtain agreement to the detailed infrastructure requirements to support the product capabilities required by the enterprise. The processes include any interaction with cross-enterprise coordination and management functions to ensure that the demand distributions capture the needs of all stakeholders.

Report Service Infrastructure Requirements

Process Identifier: 1.4.2.1.3

Hierarchy Level: 4

Brief Description:

These processes provide input into the requirements capture processes in the Resource and Engaged party domains.

Extended Description:

Not used for this process element

Capture Service Capability Shortfalls

Process Identifier: 1.4.2.2

Hierarchy Level: 3

Brief Description:

Identify specific or imminent service capacity, service performance and/or service operational support shortfalls

Extended Description:

The Capture Service Capability Shortfalls processes identify specific or imminent service capacity, service performance and/or service operational support shortfalls. These processes take information available from the Service Management & Operations processes to establish detailed views of anticipated service capacity and performance shortfalls and support process issues.

Capture Service Capacity Shortfalls

Process Identifier: 1.4.2.2.1

Hierarchy Level: 4

Brief Description:

These processes identify specific or imminent service capacity shortfalls. These processes take information available from the Service Management & Operations processes to establish detailed views of anticipated service capacity issues.

Extended Description:

Not used for this process element

Capture Service Performance Shortfalls

Process Identifier: 1.4.2.2.2

Hierarchy Level: 4

Brief Description:

Capture specific or imminent service performance shortfalls requiring action.

Extended Description:

These processes identify specific or imminent service performance shortfalls. These processes take information available from the Service Management & Operations processes to establish detailed views of anticipated service performance issues.

Capture Service Operational Support Shortfalls

Process Identifier: 1.4.2.2.3

Hierarchy Level: 4

Brief Description:

Capture specific or imminent service operational support shortfalls requiring action.

Extended Description:

These processes identify specific or imminent service operational support shortfalls. These processes take information available from the Service Management & Operations processes to establish detailed views of anticipated service operational support issues.

Gain Service Capability Investment Approval

Process Identifier: 1.4.2.3

Hierarchy Level: 3

Brief Description:

Capture all activities required to develop and gain necessary approval for investment proposals to develop and deliver the required service capabilities

Extended Description:

The Gain Service Capability Investment Approval processes capture all activities required to develop and gain necessary approval for business proposals to develop and deliver the required service capabilities, including identification of potential Parties. These processes take the input from the Map & Analyze Service Requirements, the Capture Service Capability Shortfalls and the Define Product Capability Requirements processes to develop and gain approval for any business proposals arising. In some cases the business proposal may require the creation and approval of a formal business case, in other cases the business proposal approval may be delegated to local management. In any event requirements for the service infrastructure, identification of required Resource infrastructure capabilities, the cost estimates for delivering the service and supporting resource infrastructure, including costs for materials (equipment and tools), labor and training are part of the investment proposal.

The rules and procedures outlining the necessary approval process to be used are also part of these processes.

The processes include any interaction with cross-enterprise coordination and management functions to ensure that the investment proposals capture the needs of, and are supported by, all stakeholders

Approve Service Capability Investment

Process Identifier: 1.4.2.3.2

Hierarchy Level: 4

Brief Description:

Approve business proposals for required service capability investments.

Extended Description:

These processes capture all activities required to gain necessary approval for business proposals to develop and deliver the required service capabilities, including identification of potential other parties.

The processes include any interaction with cross-enterprise coordination and management functions to ensure that the investment proposals capture the needs of, and are supported by, all stakeholders

Develop Service Capability Investment Proposals

Process Identifier: 1.4.2.3.1

Hierarchy Level: 4

Brief Description:

Develop investment proposals for required service capabilities, infrastructure, and supporting resources.

Extended Description:

These processes capture all activities required to develop business proposals to develop and deliver the required service capabilities, including identification of potential other parties. These processes take the input from the Map & Analyze Service Requirements, the Capture Service Capability Shortfalls and the Define

Product Capability Requirements processes to develop and gain approval for any business proposals arising. In some cases the business proposal may require the creation and approval of a formal business case, in other cases the business proposal approval may be delegated to local management. In any event requirements for the service infrastructure, identification of required Resource infrastructure capabilities, the cost estimates for delivering the service and supporting resource infrastructure, including costs for materials (equipment and tools), labor and training are part of the investment proposal.

The rules and procedures outlining the necessary approval process to be used are also part of these processes.

Design Service Capabilities

Process Identifier: 1.4.2.4

Hierarchy Level: 3

Brief Description:

Manage the design of the service infrastructure to meet the requirements in any approved investment proposals.

Extended Description:

The Design Service Capabilities processes manage the design of the service infrastructure to meet the requirements in any approved investment proposals approved through the Gain Service Capability Investment Approval processes. These processes ensure the collation and coordination of requirements from all approved investment proposals, assess the most appropriate service infrastructure, develop the tactical/solution architecture and design specifications to be used to build or source the necessary service infrastructure components, and select the most appropriate service infrastructure other parties to support the service requirements.

Note that the actual management of the sourcing process is handled within the Engaged Party domains

Define Service Capability Requirements

Process Identifier: 1.4.2.4.1

Hierarchy Level: 4

Brief Description:

These processes ensure the collation and coordination of requirements from all approved investment proposals approved through the Gain Service Capability Investment Approval processes.

Extended Description:

Not used for this process element

Specify Service Capability Infrastructure

Process Identifier: 1.4.2.4.2

Hierarchy Level: 4

Brief Description:

Specify the service infrastructure architecture and design needed to meet capability requirements.

Extended Description:

These processes assess the most appropriate service infrastructure, and develop the tactical/solution architecture and design specifications to be used to build or source the necessary service infrastructure components, to meet the identified service capability requirements.

Select Service Capability At Parties

Process Identifier: 1.4.2.4.3

Hierarchy Level: 4

Brief Description:

These processes select the most appropriate service infrastructure at other parties to support the identified service capability requirements.

Extended Description:

Not used for this process element

Enable Service Support & Operations

Process Identifier: 1.4.2.5

Hierarchy Level: 3

Brief Description:

Manage the design of any improvements or changes required to the service operational support processes to support the investment proposals and new service capabilities and infrastructure

Extended Description:

The Enable Service Support & Operations processes manage the design of any improvements or changes required to the service operational support processes to support the investment proposals and new service capabilities and infrastructure. The processes ensure the identification of operational support groups, required skill sets, and availability of appropriate training programs. These processes ensure the identification, collation and coordination of support requirements from all approved investment proposals, and from any operational support shortfalls identified in the Capture Service Capability Shortfalls processes.

Design Service Operational Support Process Improvements

Process Identifier: 1.4.2.5.1

Hierarchy Level: 4

Brief Description:

These processes manage the design of any improvements or changes required to the service operational support processes to support the investment proposals and new service capabilities and infrastructure.

Extended Description:

Not used for this process element

Identify Service Support Groups, Skills & Training

Process Identifier: 1.4.2.5.2

Hierarchy Level: 4

Brief Description:

The processes ensure the identification of operational support groups, required skill sets, and availability of appropriate training programs.

Extended Description:

Not used for this process element

Identify Service Support Requirements

Process Identifier: 1.4.2.5.3

Hierarchy Level: 4

Brief Description:

Identify and coordinate support requirements arising from approved service proposals and support shortfalls.

Extended Description:

These processes ensure the identification, collation and coordination of support requirements from all approved investment proposals, and from any operational support shortfalls identified in the Capture Service Capability Shortfalls processes.

Manage Service Capability Delivery

Process Identifier: 1.4.2.6

Hierarchy Level: 3

Brief Description:

Manage the provision, implementation and roll-out of the new or enhanced service capability, and associated operational support processes.

Extended Description:

The Manage Service Capability Delivery processes manage the provision, implementation and roll-out of the new or enhanced service capability and associated operational support processes. These processes are predominantly program/project management process functions, and require the detailed management and co-ordination of the delivery of individual service infrastructure components, and any underlying resource infrastructure capability delivery, to achieve the delivery of the overall service capability. These processes are responsible to ensure that the quality of the implemented service capability meets the design specifications. These processes leverage the Engaged Party domains necessary to establish any new sourcing arrangements for the delivery of service components.

These processes develop the detailed delivery, implementation and roll-out timetables, and track the expenditure and staff resource usage to deliver the service components, and provide any reporting necessary to keep stakeholders informed of progress. They are responsible for ensuring that the financial aspects of the approved business proposals are met.

Ensure Service Capability Quality

Process Identifier: 1.4.2.6.2

Hierarchy Level: 4

Brief Description:

These processes are responsible to ensure that the quality of the implemented service capability meets the design specifications.

Extended Description:

Not used for this process element

Establish Service Capability Sourcing

Process Identifier: 1.4.2.6.3

Hierarchy Level: 4

Brief Description:

These processes leverage the Engaged Party domains processes as necessary to establish any new sourcing arrangements for the delivery of service components.

Extended Description:

Not used for this process element

Develop Service Capability Timetables

Process Identifier: 1.4.2.6.4

Hierarchy Level: 4

Brief Description:

These processes develop the detailed delivery, implementation and roll-out timetables.

Extended Description:

Not used for this process element

Track and Report Service Capability Delivery

Process Identifier: 1.4.2.6.5

Hierarchy Level: 4

Brief Description:

These processes track the expenditure and staff resource usage to deliver the service components, and provide any reporting necessary to keep stakeholders informed of progress.

Extended Description:

Not used for this process element

Ensure Service Capability Costs

Process Identifier: 1.4.2.6.6

Hierarchy Level: 4

Brief Description:

These processes are responsible for ensuring that the financial aspects of the approved business proposals are met.

Extended Description:

Not used for this process element

Co-ordinate Service Capability Delivery

Process Identifier: 1.4.2.6.1

Hierarchy Level: 4

Brief Description:

Coordinate delivery and rollout of new or enhanced service capabilities and supporting operations.

Extended Description:

These processes ensure the provision, implementation and roll-out of the new or enhanced service capability and associated operational support processes. These processes are predominantly program/project management process functions, and require the detailed management and co-ordination of the delivery of individual service infrastructure components, and any underlying resource infrastructure capability delivery, to achieve the delivery of the overall service capability.

Manage Handover to Service Operations

Process Identifier: 1.4.2.7

Hierarchy Level: 3

Brief Description:

Manage the processes involved in handover of deployed service infrastructure to operational control

Extended Description:

The Manage Handover to Service Operations processes manage the processes involved in handover of deployed service infrastructure to operational control. These processes ensure that all operational and performance design requirements have been met by the installed service infrastructure, and that all tools, test equipment, operational procedures, support groups, and training is in place to allow for successful operation. These processes include the management and coordination of all stakeholders required to gain approval and acceptance of the handover to operational control.

Validate Service Infrastructure Design

Process Identifier: 1.4.2.7.2

Hierarchy Level: 4

Brief Description:

These processes ensure that all operational and process performance design requirements have been met by the installed service infrastructure.

Extended Description:

Not used for this process element

Ensure Service Handover Support

Process Identifier: 1.4.2.7.3

Hierarchy Level: 4

Brief Description:

These processes ensure that all tools, test equipment, operational procedures, support groups, and training is in place to allow for successful operation.

Extended Description:

Not used for this process element

Service Specification Lifecycle Management

Process Identifier: 1.4.3

Hierarchy Level: 2

Brief Description:

Service Specification Lifecycle Management process is responsible to develop and deliver new or enhanced service types.

Extended Description:

Service Specification Lifecycle Management processes are project oriented in that they develop and deliver new or enhanced service types. These processes include process and procedure implementation, systems changes and customer documentation. They also undertake rollout and testing of the service type, capacity management and costing of the service type. It ensures the ability of the enterprise to deliver service types according to requirements.

This process was renamed in 24.0. old name was- Service Specification Development & Retirement

Figure 3: Service Specification Lifecycle Management Children

Gather & Analyze New Service Ideas

Process Identifier: 1.4.3.1

Hierarchy Level: 3

Brief Description:

Combine specific product requirements with demographic, customer, technology and marketing information to identify specific new service classes/components or enhancements to existing service classes/components.

Extended Description:

The Gather & Analyze New Service Ideas processes combine specific product requirements with demographic, customer, technology and marketing information to identify specific new service classes/components or enhancements to existing service classes/components. These processes undertake the necessary analysis to identify potential service classes, compare current service classes with the identified required service classes, and as a result of the analysis develop new service class ideas. The new service class ideas include an analysis of the customer value proposition.

Analyze Service Classes

Process Identifier: 1.4.3.1.1

Hierarchy Level: 4

Brief Description:

These processes undertake the necessary analysis to identify potential service classes, compare current service classes with the identified required service classes.

Extended Description:

Not used for this process element

Develop Service Classes

Process Identifier: 1.4.3.1.2

Hierarchy Level: 4

Brief Description:

These processes develop new service class ideas. The new service class ideas include an analysis of the customer value proposition.

Extended Description:

Not used for this process element

Assess Performance of Existing Services

Process Identifier: 1.4.3.2

Hierarchy Level: 3

Brief Description:

Analyze the performance of existing services to identify inadequacies and required improvements

Extended Description:

The Assess Performance of Existing Services processes analyze the performance of existing services to identify inadequacies and required improvements. These processes use information from customers and from operational activities to identify required improvements.

Develop New Service Business Proposal

Process Identifier: 1.4.3.3

Hierarchy Level: 3

Brief Description:

Develop and document business proposals for the identified new or enhanced Service ideas

Extended Description:

The Develop New Service Business Proposal processes develop and document business proposals for the identified new or enhanced Service ideas (including if necessary a business case). The business proposal (or business case) identifies the new service requirements, including the specific resource components which underpin the service. The business proposal also identifies the service development, management and operations costs and anticipated benefits, including forecast demand, performance gains, productivity gains and/or operational cost improvements. The business proposal also includes an assessment of the risks and the competitive positioning of the service proposal. As a part of the business proposal development a feasibility assessment can be produced. Potential external parties who can assist in the development of the service classes are also identified (note that commercial arrangements may already be in place with these potential parties). As a part of the process, the business proposal is appropriately approved, and as a result of the approval, necessary staff and other resources are made available.

Gain Service Business Proposal Approval

Process Identifier: 1.4.3.3.2

Hierarchy Level: 4

Brief Description:

These processes manage approval of the business proposal, and as a result of the approval, necessary staff and other resources are made available.

Extended Description:

Not used for this process element

Develop Service Business Proposal

Process Identifier: 1.4.3.3.1

Hierarchy Level: 4

Brief Description:

Develop the business proposal for new or enhanced service capabilities, costs, benefits, and risks.

Extended Description:

These processes develop and document business proposals for the identified new or enhanced Service ideas (including if necessary a business case). The business proposal (or business case) identifies the new service requirements, including the specific resource components which underpin the service. The business proposal also identifies the service development, management and operations costs and anticipated benefits, including forecast demand, performance gains, productivity gains and/or operational cost improvements. The business proposal also includes an assessment of the risks and the competitive positioning of the service proposal. As a part of the business proposal development a feasibility assessment can be produced. Potential parties who can assist in the development of the service classes are also identified (note that commercial arrangements may already be in place with these potential party).

Develop Detailed Service Specifications

Process Identifier: 1.4.3.4

Hierarchy Level: 3

Brief Description:

Develop and document the detailed service-related technical and operational specifications, and customer manuals.

Extended Description:

The Develop Detailed Service Specifications processes develop and document the detailed service-related technical and operational specifications, and customer manuals. These processes develop and document the required service features, the specific underpinning resource requirements and selections, the specific operational, and quality requirements and support activities, any service specific data required for the systems and network infrastructure as agreed through the Develop New Service Business Proposal processes. The Develop Detailed Product Specifications processes provide input to these specifications. The processes ensure that all detailed specifications are produced and appropriately documented. Additionally the processes ensure that the documentation is captured in an appropriate enterprise repository.

Develop Detailed Service Technical Specifications

Process Identifier: 1.4.3.4.1

Hierarchy Level: 4

Brief Description:

Develop and document detailed technical specifications for service infrastructure.

Extended Description:

These processes develop and document the required service features for the systems and network infrastructure as agreed through the Develop New Service Business Proposal processes. The processes ensure that all detailed specifications are produced and appropriately documented. Additionally the processes ensure that the documentation is captured in an appropriate enterprise repository.

Develop Detailed Service Support Specifications

Process Identifier: 1.4.3.4.2

Hierarchy Level: 4

Brief Description:

Develop and document detailed resource support specifications for service infrastructure.

Extended Description:

These processes develop and document the specific underpinning resource requirements and selections required for the systems and network infrastructure as agreed through the Develop New Service Business Proposal processes. The processes ensure that all detailed specifications are produced and appropriately documented. Additionally the processes ensure that the documentation is captured in an appropriate enterprise repository.

Develop Detailed Service Operational Specifications

Process Identifier: 1.4.3.4.3

Hierarchy Level: 4

Brief Description:

Develop and document detailed operational, support, and quality specifications for service infrastructure.

Extended Description:

These processes develop and document the specific operational, and quality requirements and support activities, and any service specific data required for the systems and network infrastructure required for the systems and network infrastructure as agreed through the Develop New Service Business Proposal processes. The processes ensure that all detailed specifications are produced and appropriately documented. Additionally the processes ensure that the documentation is captured in an appropriate enterprise repository.

Develop Detailed Service Customer Manuals

Process Identifier: 1.4.3.4.4

Hierarchy Level: 4

Brief Description:

Develop and document customer manuals required to support new service capabilities.

Extended Description:

These processes develop and document the customer manuals as agreed through the Develop New Service Business Proposal processes. The processes ensure that all detailed specifications are produced and appropriately documented. Additionally the processes ensure that the documentation is captured in an appropriate enterprise repository.

Manage Service Development

Process Identifier: 1.4.3.5

Hierarchy Level: 3

Brief Description:

Ensure the co-coordinated development in line with the approved business case of all required new or enhanced service classes/components for that business case across the enterprise

Extended Description:

The Manage Service Development processes ensure the co-coordinated development in line with the approved business case of all required new or enhanced service classes/components for that business case across the enterprise. These processes ensure that all operational processes and procedures, IT systems changes, network changes, channel changes, operational procedures, testing tools and procedures, etc. required to support the new service class/component are identified and developed. These processes ensure that the necessary documentation and training packages are produced to support the operation of the new service class. These processes also ensure that the required service level agreements and operational level agreements to support the detailed service specifications are developed and agreed for each service class deployed, and that any party operational support has been identified and agreed. These

processes have both program/project management aspects and technical/operational specification aspects, with the detailed management of individual service class deployment managed by the Manage Service Deployment processes.

As well as developing new service classes these processes manage upgrades or enhancements to existing service classes, as the need to review operational and other support is also relevant for upgrading existing classes/components.

Note that management of major new or enhanced infrastructure delivery to support service development is managed within the Service Capability Delivery process.

Identify Required Processes & Procedures for Services

Process Identifier: 1.4.3.5.1

Hierarchy Level: 4

Brief Description:

Identify the operational processes and procedures needed to support new service classes or components.

Extended Description:

These processes ensure that all operational processes and procedures, IT systems changes, network changes, channel changes, operational procedures, testing tools and procedures, etc. required to support the new service class/component are identified.

Develop Required Processes & Procedures for Services

Process Identifier: 1.4.3.5.2

Hierarchy Level: 4

Brief Description:

Develop the operational processes and procedures needed to support new service classes or components.

Extended Description:

These processes ensure that all operational processes and procedures, IT systems changes, network changes, channel changes, operational procedures, testing tools and procedures, etc. required to support the new service class/component are developed.

Develop Service & Operational Agreements for Services

Process Identifier: 1.4.3.5.3

Hierarchy Level: 4

Brief Description:

These processes ensure that the required service level agreements and operational level agreements are developed and agreed for each resource class deployed, and that any party operational support has been identified.

Extended Description:

Not used for this process element

Gain Service & Operational Agreements Approval for Services

Process Identifier: 1.4.3.5.4

Hierarchy Level: 4

Brief Description:

These processes ensure that the required service level agreements and operational level agreements are agreed for each service class deployed, and that any party operational support has been agreed.

Extended Description:

Not used for this process element

Produce Supporting Documentation & Training Packages for Services

Process Identifier: 1.4.3.5.5

Hierarchy Level: 4

Brief Description:

These processes ensure that the necessary documentation and training packages are produced to support the operation of the new service class.

Extended Description:

Not used for this process element

Manage Service Deployment

Process Identifier: 1.4.3.6

Hierarchy Level: 3

Brief Description:

Ensure the co-coordinated deployment in line with the approved business case of all required service classes/components for that business case across the enterprise.

Extended Description:

The Manage Service Deployment processes ensure the co-coordinated deployment in line with the approved business case of all required service classes/components for that business case across the enterprise. These processes ensure that all operational processes and procedures, IT systems changes, network changes, channel changes, operational procedures, testing tools and procedures, etc. required to support the new service class/component have been implemented. These processes ensure that appropriate operational staff are identified and have received the necessary training. These processes ensure that the agreed party operational support has been implemented. These processes also ensure that acceptance testing is successfully performed to assure that the new or enhanced services comply with the specifications. These processes have both program/project and management aspects.

Manage Service Operational Staff Training**Process Identifier:** 1.4.3.6.2**Hierarchy Level:** 4**Brief Description:**

These processes ensure that appropriate operational staff are identified and have received the necessary training.

Extended Description:

Not used for this process element

Develop Service Party Operational Support**Process Identifier:** 1.4.3.6.3**Hierarchy Level:** 4**Brief Description:**

These processes ensure that the agreed party operational support has been implemented.

Extended Description:

Not used for this process element

Manage Service Acceptance Testing

Process Identifier: 1.4.3.6.4

Hierarchy Level: 4

Brief Description:

These processes ensure that acceptance testing is successfully performed to assure that the new or enhanced services comply with the specifications.

Extended Description:

Not used for this process element

Manage Service Process & Procedure Implementation

Process Identifier: 1.4.3.6.1

Hierarchy Level: 4

Brief Description:

Ensure required service processes and procedures are implemented and ready for use.

Extended Description:

These processes ensure that all operational processes and procedures, IT systems changes, network changes, channel changes, operational procedures, testing tools and procedures, etc. required to support the new service class/component have been implemented.

Manage Service Exit

Process Identifier: 1.4.3.7

Hierarchy Level: 3

Brief Description:

Identify existing service which are unviable and manage the processes to exit the Service Class from the market.

Extended Description:

The Manage Service Exit processes identify existing service classes which are unviable and manage the process to exit the Service from the products they support. The processes analyze existing service classes to identify economically or strategically unviable classes, identify products & customers impacted by any exit, develop product & customer specific exit or migration strategies, develop service infrastructure transition and/or replacement strategies, and manage the operational aspects of the exit process. A business proposal identifying the competitive threats, risks and costs may be required as a part of developing the exit strategy. These processes include any interaction with cross-enterprise co-ordination and management functions to ensure that the needs of all stakeholders are identified and managed.

Service Specification Test Development & Retirement

Process Identifier: 1.4.3.8

Hierarchy Level: 3

Brief Description:

Service Test Development & Retirement is in charge of the Service Test catalogue.

Extended Description:

Service Test Development & Retirement is in charge of the Service Test catalogue.

A type of Service Test aims at measuring proper functioning and capacities of a Service.

Service Test Development & Retirement includes:

- Specifying in detail each Service Test according to the different context. It includes specifying:
 - the roles authorized to use the Test and quotas for each type of role
 - the method to conduct the Test
 - the rules that define the strategies for conducting the test (including the test plan)
 - the thresholds and related actions
 - the relationships with lower level tests (Resource Test)
 - the report of test results with rules for enrichment of Resource Tests results according to role asking for it
- Specifying test scenarios defining sequence of Tests with rules about context and planning to trigger it. It includes roles allowed for asking test scenario and corresponding quotas.

Service Support Management

Process Identifier: 1.4.4

Hierarchy Level: 2

Brief Description:

Manage service infrastructure, ensuring that the appropriate service capacity is available and ready to support the SM&O Fulfillment, Assurance and Billing processes

Extended Description:

Service Support Management processes manage service infrastructure, ensuring that the appropriate service capacity is available and ready to support the SM&O Fulfillment, Assurance and Billing processes in instantiating and managing service instances, and for monitoring and reporting on the capabilities and costs of the individual SM&O FAB processes.

The responsibilities of these processes include, but are not limited to:

- Supporting the operational introduction of new and/or modified service infrastructure;
- Managing and ensuring the ongoing quality of the Service Inventory;
- Applying service capacity rules from Infrastructure Lifecycle Management processes;
- Analyzing availability and quality over time on service infrastructure and service instances, including trend analysis and forecasting;
- Ensuring the operational capability of the SM&O processes
- Maintaining rating and tariff information for service infrastructure and service instances.
- . Conducting Vulnerability Management;
- . Conducting Threat Assessments;
- . Conducting Risk Assessments;
- . Conducting Risk Mitigation;
- . Conducting Secure Configuration Activities

This process was renamed in 23.5. old name was Service Readiness & Support

This process was renamed in 24.0 old name was Service Support Readiness

Figure 4: Service Support Management Children

Manage Service Inventory

Process Identifier: 1.4.4.1

Hierarchy Level: 3

Brief Description:

Establish, manage and administer the enterprise's service inventory, as embodied in the Service Inventory Database, and monitor and report on the usage and access to the service inventory, and the quality of the data maintained in it.

Extended Description:

The responsibilities of the Manage Service Inventory processes are twofold - establish, manage and administer the enterprise's service inventory, as embodied in the Service Inventory Database, and monitor and report on the usage and access to the service inventory, and the quality of the data maintained in it.

The service inventory maintains records of all service infrastructure and service instance configuration, version, and status details. It also records test and performance results and any other service related- information, required to support SM&O and other processes.

The service inventory is also responsible for maintaining the association between customer purchased product offering instances and service instances, created as a result of the Service Configuration & Activation processes.

Responsibilities of these processes include, but are not limited to:

- Identifying the inventory-relevant information requirements to be captured for service infrastructure and service instances ;
- Identifying, establishing and maintaining service inventory repository facilities;
- Establishing and managing the service inventory management and information capture processes;
- Managing the registration and access control processes that enable processes to create, modify, update, delete and/or download service data to and from the service inventory;

- Ensuring the service inventory repository accurately captures and records all identified service infrastructure and service instance details, through use of automated or manual audits;
- Tracking and monitoring of the usage of, and access to, the service inventory repository and associated costs, and reporting on the findings
- Identifying any technical driven shortcomings of the service inventory repository, and providing input to Resource Development & Management processes to rectify these issues.

Manage Service Inventory Database and Processes

Process Identifier: 1.4.4.1.1

Hierarchy Level: 4

Brief Description:

Establishing, managing and administering the enterprise's service inventory

Extended Description:

- Identifying the inventory-relevant information requirements to be captured for service infrastructure and service instances;
- Identifying, establishing and maintaining service inventory repository facilities;
- Establishing and managing the service inventory management and information capture processes;
- Managing the registration and access control processes that enable processes to create, modify, update, delete and/or download service data to and from the service inventory

Perform Service Inventory Audit Tests

Process Identifier: 1.4.4.1.2

Hierarchy Level: 4

Brief Description:

Performing audit if inventory repository accurately captures and records all identified service infrastructure and service instance details

Extended Description:

- Ensuring the service inventory repository accurately captures and records all identified service infrastructure and service instance details, through use of automated or manual audits;

Track and Monitor Service Inventory Capabilities

Process Identifier: 1.4.4.1.3

Hierarchy Level: 4

Brief Description:

Monitoring and reporting on the usage and access to the service inventory, and the quality of the data maintained in it.

Extended Description:

- Tracking and monitoring of the usage of, and access to, the service inventory repository and associated costs, and reporting on the findings;

Identify Service Inventory Issues and Provide Reports and Warnings

Process Identifier: 1.4.4.1.4

Hierarchy Level: 4

Brief Description:

Managing and Identifying any service Inventory Repository issues and providing warnings.

Extended Description:

- Identifying any technical driven shortcomings of the service inventory repository, and providing input to Service Development & Management processes to rectify these issues.

Enable Service Configuration & Activation

Process Identifier: 1.4.4.2

Hierarchy Level: 3

Brief Description:

Planning and deployment of service infrastructure, and for ensuring availability of sufficient service infrastructure to support the Service Configuration & Activation processes.

Extended Description:

The Enable Service Configuration & Activation processes are responsible for planning and deployment of service infrastructure, and for ensuring availability of sufficient service infrastructure to support the Service Configuration & Activation processes.

The responsibilities of these processes include, but are not limited to:

- forecasting at an operational level service infrastructure volume requirements and run-out timeframes;
- the capacity planning associated with the deployment of new and/or modified service infrastructure;

- establishment and monitoring of organizational arrangements to support deployment and operation of new and/or modified service infrastructure;
- creation, deployment, modification and/or upgrading of service infrastructure deployment support tools (including Service Inventory) and processes for new and/or modified service infrastructure;
- development and promulgation of service infrastructure capacity deployment rules and controls;
- authoring, reviewing and approving operational procedures developed by Service Development & Management processes prior to service infrastructure deployment;
- the testing and acceptance of new and/or modified service infrastructure as part of the handover procedure from the Service Development & Management processes to Operations;
- detecting service infrastructure operational limitations and/or deployment incompatibilities and providing requirements to address these aspects to Service Development & Management processes;
- co-ordination and roll-out, in accordance with approved plans, of the approved new and/or modified service infrastructure;
- monitoring capacity utilization of deployed service infrastructure to provide early detection of potential service infrastructure shortfalls;
- reconfiguration and re-arrangement of under-utilized deployed service infrastructure;
- managing recovery and/or removal of obsolete or unviable service infrastructure;
- reporting on deployed service infrastructure capacity;
- Tracking and monitoring of the service infrastructure deployment processes and costs (including where service infrastructure is deployed and managed by third parties), and reporting on the capability of the service infrastructure deployment processes;
- establishing and managing service provisioning notification facilities and lists to support the Service Configuration & Activation notification and reporting processes

- updating the Service Inventory of any changes to the available service infrastructure capacity.

Plan & Forecast Service Infrastructure Requirements and Manage Capacity Planning

Process Identifier: 1.4.4.2.1

Hierarchy Level: 4

Brief Description:

Planning, managing, deploying, monitoring and reporting of new and/or modified service infrastructure

Extended Description:

Planning, managing, deploying, monitoring and reporting of new and/or modified service infrastructure to ensure availability of sufficient service infrastructure to support the Service Provisioning processes. This includes:

- Forecasting at an operational level service infrastructure volume requirements and run-out timeframes;
- Managing capacity planning associated with the deployment of new and/or modified service infrastructure

Establish, Manage, and Develop Service Infrastructure Organization, Tools and Processes

Process Identifier: 1.4.4.2.2

Hierarchy Level: 4

Brief Description:

Establishing, Creating, Managing, and developing organization, Tools and processes for operations of new/or modified service infrastructure.

Extended Description:

- Establishing and monitoring of organizational arrangements to support deployment and operation of new and/or modified service infrastructure;
- Creating, deploying, modifying and/or upgrading of service infrastructure deployment support tools (including service Inventory) and processes for new and/or modified service infrastructure;

Develop and Implement Service Infrastructure Capacity and Operational Rules and Procedures

Process Identifier: 1.4.4.2.3

Hierarchy Level: 4

Brief Description:

Developing and implementing the capacity deployment rules and administrating the infrastructure operational procedures.

Extended Description:

- Developing and promulgating service infrastructure capacity deployment rules and controls;
- Authoring, reviewing and approving operational procedures developed by Service Development & Management processes prior to service infrastructure deployment;

Perform Service Infrastructure Acceptance Test and Address & Monitor the Change

Process Identifier: 1.4.4.2.4

Hierarchy Level: 4

Brief Description:

Performing acceptance test during the hand over process of new and/or modified service infrastructure. Also monitoring the new and/or modified infrastructure and addressing the operational limitations.

Extended Description:

- Testing and acceptance of new and/or modified service infrastructure as part of the handover procedure from the Service Development & Management processes to Operations;
- Detecting service infrastructure operational limitations and/or deployment incompatibilities and providing requirements to address these aspects to Service Development & Management processes;

Monitor, Report and Release Mgmt. of Service Infrastructure and Capacity Utilization

Process Identifier: 1.4.4.2.5

Hierarchy Level: 4

Brief Description:

Monitoring and reporting the capacity utilization of existing infrastructure.

Extended Description:

- Monitoring capacity utilization of deployed service infrastructure to provide early detection of potential service infrastructure shortfalls;
- Monitoring of, and reporting on, service infrastructure and resource instance currency and version management;

Optimize Existing Service Infrastructure Utilization

Process Identifier: 1.4.4.2.6

Hierarchy Level: 4

Brief Description:

Optimizing the infrastructure capacity utilization.

Extended Description:

- Reconfiguring and re-arranging under-utilized deployed service infrastructure

Update Service Inventory Record

Process Identifier: 1.4.4.2.7

Hierarchy Level: 4

Brief Description:

Updating the inventory record.

Extended Description:

- Updating the Service Inventory of any changes to the available service infrastructure capacity.

Support Service Problem Management

Process Identifier: 1.4.4.3

Hierarchy Level: 3

Brief Description:

Assist Service Problem Management processes by proactively undertaking statistically driven preventative and scheduled service infrastructure maintenance activities and monitoring, managing and reporting on the capability of the Service Problem Management processes.

Extended Description:

The responsibilities of the Support Service Problem Management processes are twofold - assist Service Problem Management processes by proactively undertaking statistically driven preventative and scheduled service infrastructure maintenance activities and monitoring, managing and reporting on the capability of the Service Problem Management processes.

These processes are responsible for ensuring that the service infrastructure is working effectively and efficiently.

Responsibilities of these processes include, but are not limited to:

- Extracting and analyzing, including undertaking trend analysis, historical and current service instance problem reports and performance reports to identify potential service infrastructure or service instances requiring proactive maintenance and/or replacement;
- Requesting scheduling of additional service instance data collection to assist in the analysis activity;
- Requesting scheduling of service instance performance testing to assist in analysis activity;
- Developing and managing service infrastructure and service instance proactive maintenance programs;
- Requesting service provisioning activity to prevent anticipated service problems associated with capacity limitations identified in the analysis activities;
- Reporting outcomes of trend analysis to Service Development & Management processes to influence new and/or modified service infrastructure development;
- Tracking and monitoring of the Service Problem Management processes and associated costs (including where service infrastructure is deployed and managed by third parties), and reporting on the capability of the Service Problem Management processes;
- Establishing and managing service problem notification facilities and lists to support the Service Problem Management notification and reporting processes;

Manage Service Infrastructure, Provisioning and Preventive Maintenance Schedules

Process Identifier: 1.4.4.3.2

Hierarchy Level: 4

Brief Description:

Proactively undertaking statistically driven preventative and scheduled service infrastructure maintenance activities, and repair activities, and monitoring, managing and reporting on the capability of the Service Problem Management processes.

Extended Description:

- Requesting scheduling of additional service instance data collection to assist in the analysis activity;
- Requesting scheduling of service instance performance testing to assist in analysis activity;
- Developing and managing service infrastructure and service instance proactive maintenance programs;
- Requesting service provisioning activity to prevent anticipated resource troubles associated with capacity limitations identified in the analysis activities;

Manage Service Problem & Performance Data Collection

Process Identifier: 1.4.4.3.1

Hierarchy Level: 4

Brief Description:

Reviewing the trend analysis and undertaking the analysis of trouble and performance report to identify the necessary preventative activities.

Extended Description:

- Extracting and analyzing, including undertaking trend analysis, historical and current service instance trouble reports and performance reports to identify potential service infrastructure or service instances requiring proactive maintenance and/or replacement;

Report Service Problem Trends

Process Identifier: 1.4.4.3.3

Hierarchy Level: 4

Brief Description:

Proactively generating reports based on the trend analysis.

Extended Description:

- Reporting outcomes of trend analysis to Service Development & Management processes to influence new and/or modified service infrastructure development;

Track, Monitor and Manage Service Problem Processes

Process Identifier: 1.4.4.3.4

Hierarchy Level: 4

Brief Description:

Track, monitor and assess the service performance management processes and associated costs and report.

Extended Description:

- Tracking and monitoring of the Service Problem Management processes and associated costs, and reporting on the capability of the Service Problem Management processes;

Provide Support for Service Problem Processes

Process Identifier: 1.4.4.3.5

Hierarchy Level: 4

Brief Description:

Establishing, managing and maintaining the supporting facilities and quality management support for Service Problem management processes.

Extended Description:

- Establishing and managing Service Problem notification facilities and lists to support the Service Problem Management notification and reporting processes
- Supporting the Support Service Problem Management process

Enable Service Quality Management

Process Identifier: 1.4.4.4

Hierarchy Level: 3

Brief Description:

Support Service Quality Management processes by proactively monitoring and assessing service infrastructure performance, and monitoring, managing and reporting on the capability of the Service Quality Management processes.

Extended Description:

The responsibilities of the Enable Service Quality Management processes are twofold -support Service Quality Management processes by proactively monitoring and assessing service infrastructure performance, and monitoring, managing and reporting on the capability of the Service Quality Management processes.

Proactive management is undertaken using a range of performance parameters, whether technical, time, economic or process related.

The responsibilities of the processes include, but are not limited to:

- Undertaking proactive monitoring regimes of service infrastructure as required to ensure ongoing performance within agreed parameters over time;
- Developing and maintaining a repository of acceptable performance threshold standards for service instances to support the Service Quality Management processes;
- Undertaking trend analysis, and producing reports, of the performance of service infrastructure to identify any longer term deterioration;
- Monitoring and analyzing the service instance analyses produced by the Service Quality Management processes to identify problems that may be applicable to the service infrastructure as a whole;
- Sourcing details relating to service instance performance and analysis from the service inventory to assist in the development of trend analyses;
- Logging the results of the analysis into the service inventory repository;
- Establishing and managing service quality data collection schedules, including managing the collection of the necessary information from the Resource Data Collection & Distribution processes, to support proactive monitoring and analysis activity, and requests from Service Quality Management processes for additional data to support service instance performance analysis;
- Establishing and managing facilities to support management of planned service infrastructure and service instance outages;
- Establishing, maintaining and managing the testing of Service Quality control plans to cater for anticipated service quality disruptions;
- Proactively triggering the instantiation of control plans to manage performance through programmed and/or foreseen potentially disruptive events, i.e. anticipated traffic loads on Xmas day, planned outages, etc.;
- Tracking and monitoring of the Service Quality Management processes and associated costs (including where service infrastructure is deployed and managed by third parties), and reporting on the capability of the Service Quality Management processes;

- Establishing and managing service quality notification facilities and lists to support the Service Quality Management notification and reporting processes
- Supporting the Support Customer QoS/SLA Management process.

Establish and Maintain Service Performance Threshold Standards

Process Identifier: 1.4.4.4.1

Hierarchy Level: 4

Brief Description:

Establishing and maintaining the rules and standards for performance threshold

Extended Description:

- Developing and maintaining a repository of acceptable performance threshold standards for resource instances to support the Service Quality Management processes;

Monitor and Analyze Service Performance Reports, and Identify Issues

Process Identifier: 1.4.4.4.2

Hierarchy Level: 4

Brief Description:

Review the service performance management operational report prepared by resource performance management processes.

Extended Description:

- Monitoring and analyzing the service instance analyses produced by the Service Quality Management processes to identify problems that may be applicable to the service infrastructure as a whole;

Correlate the Service Performance Problem Reports & Manage Inventory Repository

Process Identifier: 1.4.4.4.3

Hierarchy Level: 4

Brief Description:

Correlating the Performance issues identified based on the performance report review and logging the results in inventory repository.

Extended Description:

- Sourcing details relating to service instance performance and analysis from the resource inventory to assist in the development of trend analyses;
- Logging the results of the analysis into the service inventory repository;

Manage Service Performance Data Collection

Process Identifier: 1.4.4.4.4

Hierarchy Level: 4

Brief Description:

Developing and managing the service performance data collection schedules and supporting the monitoring activities to gather the resource performance data.

Extended Description:

- Establishing and managing service quality data collection schedules, including managing the collection of the necessary information from the Resource Data Collection & Distribution processes, to support proactive monitoring and analysis activity, and requests from Service Quality Management processes for additional data to support service instance performance analysis;
- Management processes for additional data to support service instance performance analysis;

Assess and Report Service Quality Management Processes

Process Identifier: 1.4.4.4.5

Hierarchy Level: 4

Brief Description:

Track, monitor and assess the service performance management processes and associated costs and report.

Extended Description:

- Tracking and monitoring of the Service Quality Management processes and associated costs (including where service infrastructure is deployed and managed by third parties), and reporting on the capability of the Service Quality Management processes;

Support Service & Specific Instance Rating

Process Identifier: 1.4.4.5

Hierarchy Level: 3

Brief Description:

Ensure that rating and tariff information is maintained for each service class, for use by Service & Specific Instance Rating

Extended Description:

The purpose of the Support Service & Specific Instance Rating processes ensure that rating and tariff information is maintained for each service class, for use by Service & Specific Instance Rating. They are also responsible for the processing of this information related to administration of the services

Manage Service Test

Process Identifier: 1.4.4.6

Hierarchy Level: 3

Brief Description:

Manage Service Test process manages the end-to-end execution of a test or test scenario for services not specific to a customer. Tests can be manual or automated.

Extended Description:

Manage Service Test process manages the end-to-end execution of a test or test scenario for services not specific to a customer. Tests can be manual or automated.

Service Test Management processes rely on Product and Resource Test Management processes due to dependencies between product tests and resource tests.

Service Test Management includes:

- Identification of service tests needed according to fulfillment and assurance issues

- triggering of service tests in manual or automated mode
- Execution of service tests
- Verification of test authorization (role and context) and quota management
- Identification and prioritization of tests
- Setting up the test context and configuration
- Triggering appropriate product and resource Tests
- Tests can be on-demand or planned according to specific needs
- Enrichment with product and resource tests results based on applicable service test rules
- Reporting of test results

Service Activation Management

Process Identifier: 1.4.5

Hierarchy Level: 2

Brief Description:

Allocation, implementation, configuration, activation and testing of specific services to meet customer requirements.

Extended Description:

Service Activation Management processes encompass allocation, implementation, configuration, activation and testing of specific services to meet customer requirements, or in response to requests from other processes to alleviate specific service capacity shortfalls, availability concerns or failure conditions. Where included in the service provider offering, these processes extend to cover customer premises equipment.

Responsibilities of the Service Configuration & Activation processes include, but are not limited to:

- Verifying whether specific service designs sought by customers are feasible as part of pre-order feasibility checks;
- Allocating the appropriate specific service parameters to support service orders or requests from other processes;
- Reserving specific service parameters (if required by the business rules) for a given period of time until the initiating customer order is confirmed, or until the reservation period expires (if applicable);
- Implementing, configuring and activating specific services, as appropriate;
- Testing the specific services to ensure the service is working correctly;
- Recovery of specific services;
- Updating of the Service Inventory Database to reflect that the specific service has been allocated, modified or recovered;
- Assigning and tracking service provisioning activities;
- Managing service provisioning jeopardy conditions
- Reporting progress on service orders to other processes.

This process was renamed in 24.0 Old name was Service Configuration & Activation

Figure 5: Service Activation Management Children

Design Solution

Process Identifier: 1.4.5.1

Hierarchy Level: 3

Brief Description:

Develop an end-end specific service design which complies with a particular customer's requirement

Extended Description:

The purpose of the Design Solution processes is to develop an end-end specific service design which complies with a particular customer's requirement.

These processes are invoked when a customer order requires special or unusual end-end service arrangements, which are not able to be satisfied using standard service arrangements. These processes may be invoked as part of a service feasibility assessment, or as a result of a confirmed customer order.

The responsibilities of these processes include, but are not limited to:

- Developing an overall service solution design for a particular customer, including customer premises equipment, operational methods, resource assignments and pre-order feasibility;
- Developing an implementation plan considering training and operational support measures and needs, such as the proper parameter information for the Service Quality Management process;
- Consideration of current and future service and underlying resources infrastructure, as well as expected solution results, budget, duration and risks;
- Consideration of the time schedule according with customer requirements;

- Ensure service and provisioning efficiency;
- Undertaking a business assessment, ensuring an appropriate time-to-revenue as a result of the service and underlying resource investment
- Developing a detailed design identifying the relevant service orders to be issued to the Implement,

Configure & Activate Service process and the Allocate Specific Service Parameters to Services processes.

A specific service design may require inclusion of some or all of the above aspects depending on whether the service design is being undertaken as part of a feasibility assessment, or is being developed as a result of a committed customer order.

These processes invoke requests to Resource Domain provisioning processes to determine the availability of suitable specific resources, or parties through the Service Domain process in the event that the service design requires either the inclusion of outsourced or partner provided specific services.

Develop Overall Service Design

Process Identifier: 1.4.5.1.1

Hierarchy Level: 4

Brief Description:

Develop an overall service solution design for a particular customer, including customer premises equipment, operational methods, resource assignments and pre-order feasibility;

Extended Description:

Not used for this process element

Develop Service Implementation Plan

Process Identifier: 1.4.5.1.2

Hierarchy Level: 4

Brief Description:

Develop the plan for implementing the service, including timing, support needs, budget, and risks.

Extended Description:

Develop an implementation plan considering training and operational support measures and needs, such as the proper parameter information for the Service Quality Management process;

? Consideration of current and future service and underlying resources infrastructure, as well as expected solution results, budget, duration and risks;

? Consideration of the time schedule according with customer requirements;

? Ensure service and provisioning efficiency;

? Undertaking a business assessment, ensuring an appropriate time-to-revenue as a result of the service and underlying resource investment;

Develop Detailed Service Design

Process Identifier: 1.4.5.1.3

Hierarchy Level: 4

Brief Description:

Develop a detailed design identifying the relevant service orders to be issued to the Implement,

Configure & Activate Service process and the Allocate Specific Service Parameters to Services processes.

Extended Description:

Not used for this process element

Allocate Specific Service Parameters to Services

Process Identifier: 1.4.5.2

Hierarchy Level: 3

Brief Description:

Issue service identifiers for new services.

Extended Description:

The purpose of the Allocate Specific Service Parameters to Services processes is to issue service identifiers for new services.

Where the Allocate Specific Service Parameters to Services processes are requested by a pre-feasibility service order, or by the Design Services processes, these processes determine whether the requested service parameters are available. Depending on business rules, and on any specific levels of commitment contained in the initiating service order or service design request, these processes may reserve specific service parameters linked to the initiating service order or service design request for a period of time, and releasing them when the time period has expired. These processes are responsible for creating a response to the initiating processes with respect to the feasibility assessment.

Where the Allocate Specific Service Parameters to Services processes are requested by a service order issued in response to a confirmed customer order, these processes are responsible for allocating the specific service parameters required to satisfy the initiating service order. Any previously reserved specific service parameters are marked as allocated.

Determine Service Parameter Availability

Process Identifier: 1.4.5.2.1

Hierarchy Level: 4

Brief Description:

Where the Allocate Specific Service Parameters to Services processes are requested by a pre-feasibility service order, or by the Design Services processes, these processes determine whether the requested service parameters are available.

Extended Description:

Not used for this process element

Release Service Parameter

Process Identifier: 1.4.5.2.3

Hierarchy Level: 4

Brief Description:

Release the reservation when the time period has expired.

Extended Description:

Not used for this process element

Allocate Service Parameters

Process Identifier: 1.4.5.2.4

Hierarchy Level: 4

Brief Description:

Allocate the specific service parameters required to fulfill the initiating service order.

Extended Description:

Where the Allocate Specific Service Parameters to Services processes are requested by a service order issued in response to a confirmed customer order, this process is responsible for allocating the specific service parameters required to satisfy the initiating service order. Any previously reserved specific service parameters are marked as allocated.

Track & Manage Service Provisioning

Process Identifier: 1.4.5.3

Hierarchy Level: 3

Brief Description:

Ensure service provisioning activities are assigned, managed and tracked efficiently.

Extended Description:

The objective of the Track & Manage Service Provisioning processes is to ensure service provisioning activities are assigned, managed and tracked efficiently.

Responsibilities of these processes include, but are not limited to:

- Scheduling, assigning and coordinating service provisioning related activities;

- Generating the respective resource order creation request(s) to Issue Resource Orders based on specific service orders;
- Escalating status of service orders in accordance with local policy; • Undertaking necessary tracking of the execution process;
- Adding additional information to an existing service order;
- Modifying information in an existing service order;•
- Modifying the service order status;
- Canceling a service order when the initiating customer order is cancelled;
- Monitoring the jeopardy status of service orders, and escalating service orders as necessary
- Indicating completion of a service order by modifying the service order status.

Note that some specific service components may be delivered by other parties. In these cases the Track & Manage Service Provisioning process is responsible for initiating requests, through Party Order handling for the delivery by the party of the specific service components.

Assign Service Provisioning Activity

Process Identifier: 1.4.5.3.1

Hierarchy Level: 4

Brief Description:

Schedule, assign and coordinate service provisioning related activities.

Extended Description:

Not used for this process element

Track Service Provisioning Activity

Process Identifier: 1.4.5.3.2

Hierarchy Level: 4

Brief Description:

Undertake necessary tracking of the execution process. Monitor the jeopardy status of service orders, and escalating service orders as necessary.

Extended Description:

Not used for this process element

Manage Service Provisioning Activity

Process Identifier: 1.4.5.3.3

Hierarchy Level: 4

Brief Description:

Manage service provisioning activities, including status, tracking, updates, cancellations, and related resource orders.

Extended Description:

Responsibilities of this processes include, but are not limited to:

- Generating the respective resource order creation request(s) to Issue Resource Orders based on specific service orders;

- Escalating status of service orders in accordance with local policy;
- Undertaking necessary tracking of the execution process;
- Adding additional information to an existing service order;
- Modifying information in an existing service order;?
- Modifying the service order status;
- Canceling a service order when the initiating customer order is cancelled;
- Indicating completion of a service order by modifying the service order status.

Note that some specific service components may be delivered by other parties. In these cases the Track & Manage Service Provisioning process is responsible for initiating requests, through Party Order handling for the delivery by the party of the specific service components.

Implement, Configure & Activate Service

Process Identifier: 1.4.5.4

Hierarchy Level: 3

Brief Description:

Implement, configure and activate the specific services allocated against an issued service order.

Extended Description:

The purpose of the Implement, Configure & Activate Service processes is to implement, configure and activate the specific services allocated against an issued service order.

These processes are responsible for, but not limited to:

- Assessing and planning the approach to be undertaken for implementation, configuration and activation;
- Re-using standard implementation, configuration and activation processes applicable to specific services;
- Implementing, configuring and reconfiguring specific services, including customer premises equipment if part of the service provider offering.
- Providing notifications as required if the implementation, configuration and activation activity requires a planned outage or is likely to initiate false specific service alarm event notifications
- Updating the information contained in the service inventory as to the configuration of specific services and their status.

At the successful conclusion of these activities, the status of the specific services will be changed from allocated to activated, which means they are in-use.

Configure Service

Process Identifier: 1.4.5.4.1

Hierarchy Level: 4

Brief Description:

Configure or reconfigure specific services and update service inventory information as required.

Extended Description:

Assess and plan the approach to be undertaken for configuration.

Re-use standard configuration and processes applicable to specific services.

Configure and reconfigure specific services, including customer premises equipment if part of the service provider offering.

Provide notifications as required if the configuration activity requires a planned outage or is likely to initiate false specific service alarm event notifications.

Update the information contained in the service inventory as to the configuration of specific services and their status.

Implement Service

Process Identifier: 1.4.5.4.2

Hierarchy Level: 4

Brief Description:

Implement specific services using standard methods and provide required notifications.

Extended Description:

Assess and plan the approach to be undertaken for implementation.

Re-use standard implementation processes applicable to specific services.

Implement specific services, including customer premises equipment if part of the service provider offering.

Provide notifications as required if the implementation activity requires a planned outage or is likely to initiate false specific service alarm event notifications.

Activate Service

Process Identifier: 1.4.5.4.3

Hierarchy Level: 4

Brief Description:

Activate specific services and update their status to in-use following successful activation.

Extended Description:

Assess and plan the approach to be undertaken for activation.

Re-used standard activation processes applicable to specific services.

Provide notifications as required if the activation activity requires a planned outage or is likely to initiate false specific service alarm event notifications.

At the successful conclusion of this activity, the status of the specific services will be changed from allocated to activated, which means they are in-use.

Test Service End-to-End

Process Identifier: 1.4.5.5

Hierarchy Level: 3

Brief Description:

Test specific services to ensure all components are operating within normal parameters, and that the service is working to agreed performance levels

Extended Description:

The responsibility of the Test Service End-to-End processes is to test specific services to ensure all components are operating within normal parameters, and that the service is working to agreed performance levels before its activation for the customer.

This purpose is performed through testing the service end-to-end as far as possible.

These processes test specific services against external party defined test plans, or against test plans developed by the service provider.

Where appropriate test plans are not available these processes are responsible for developing appropriate test plans. These processes are also responsible for capturing and storing the test results for historical and downstream testing comparison purposes.

If these tests succeed, the specific services will be marked as in-service which means the specific services are available for use by customers.

Test Service

Process Identifier: 1.4.5.5.1

Hierarchy Level: 4

Brief Description:

Test specific services end-to-end to ensure they meet agreed operating and performance levels before activation.

Extended Description:

Test specific services to ensure all components are operating within normal parameters, and that the service is working to agreed performance levels before its activation for the customer.

This purpose is performed through testing the service end-to-end as far as possible.

These processes test specific services against external party defined test plans, or against test plans developed by the service provider.

Capture Service Test Results

Process Identifier: 1.4.5.5.3

Hierarchy Level: 4

Brief Description:

Capture and store the test results for historical and downstream testing comparison purposes.

If the tests succeed, the specific services will be marked as in-service which means the specific services are available for use by customers.

Extended Description:

Not used for this process element

Issue Service Orders

Process Identifier: 1.4.5.6

Hierarchy Level: 3

Brief Description:

Issue correct and complete service orders

Extended Description:

The purpose of the Issue Service Orders processes is to issue correct and complete service orders.

The service orders may be required to satisfy pertinent customer order information received, may arise as a result of requests for service provisioning to satisfy service problem recovery activities, may arise to alleviate service performance issues, or may arise as a result of information received from parties in relations to specific services.

These processes assess the information contained in the customer order, through a service order request, relating to the purchased product offering, initiating service process or external party initiated request, to determine the associated service orders that need to be issued.

The issued service order may require a service feasibility assessment or a service design to be produced, may require new provisioning activities for specific services, may require a change to a previously issued service order, or may require deletion and/or recovery of previously delivered specific services. Where, the initiating request or the purchased product offering has a standard set of associated service orders this process is responsible for issuing the service orders, and for creating a record of the relevant initiating request or customer order information and the associated service orders.

Where the initiating request or the purchased product offering has special or unusual requirements, and a specific feasibility assessment and/or service design has been previously created, this process is responsible for issuing the service orders, and for creating a record of the relevant initiating request or customer order information and the associated service orders.

Where the purchased product offering has special or unusual requirements, and a specific feasibility assessment and/or specific service design has not been previously created, this process marks the issued service order as requiring special handling, and passes management for further processing to the Track & Manage Service Provisioning process.

The orchestration, if required, and tracking of the service order progress is the responsibility of the Track & Manage Service Provisioning processes.

Assess Service Request

Process Identifier: 1.4.5.6.1

Hierarchy Level: 4

Brief Description:

Assess service requests to determine the service orders required to fulfill the initiating need.

Extended Description:

This process assesses the information contained in the customer order, through a service order request, relating to the purchased product offering, initiating service process or party initiated request, to determine the associated service orders that need to be issued.

Create Service Orders

Process Identifier: 1.4.5.6.2

Hierarchy Level: 4

Brief Description:

Create and issue service orders associated with customer orders, service changes, or recovery activities.

Extended Description:

The service orders may be required to satisfy pertinent customer order information received, may arise as a result of requests for service provisioning to satisfy service problem recovery activities, may arise to alleviate service performance issues, or may arise as a result of information received from parties in relations to specific services.

The issued service order may require a service feasibility assessment or a service design to be produced, may require new provisioning activities for specific services, may require a change to a previously issued service order, or may require deletion and/or recovery of previously delivered specific services. Where, the initiating request or the purchased product offering has a standard set of associated service orders this process is responsible for issuing the service orders, and for creating a record of the relevant initiating request or customer order information and the associated service orders.

Where the initiating request or the purchased product offering has special or unusual requirements, and a specific feasibility assessment and/or service design has been previously created, this process is responsible for issuing the service orders, and for creating a record of the relevant initiating request or customer order information and the associated service orders.

Mark Service Order for Special Handling

Process Identifier: 1.4.5.6.3

Hierarchy Level: 4

Brief Description:

Mark service orders for special handling when special requirements need further design or feasibility work.

Extended Description:

Where the purchased product offering has special or unusual requirements, and a specific feasibility assessment and/or specific service design has not been previously created, this process marks the issued service order as requiring special handling, and passes management for further processing to the Track & Manage Service Provisioning process.

The orchestration, if required, and tracking of the service order progress is the responsibility of the Track & Manage Service Provisioning processes.

Report Service Provisioning

Process Identifier: 1.4.5.7

Hierarchy Level: 3

Brief Description:

Monitor the status of service orders, provide notifications of any changes and provide management reports.

Extended Description:

The objective of the Report Service Provisioning processes is to monitor the status of service orders, provide notifications of any changes and provide management reports.

These processes are responsible for continuously monitoring the status of service orders and managing notifications to processes and other parties registered to receive notifications of any status changes. Notification lists are managed and maintained by the Enable Service Configuration & Activation processes.

These processes record, analyze and assess the service order status changes to provide management reports and any specialized summaries of the efficiency and effectiveness of the overall Service Configuration & Activation process. These specialized summaries could be specific reports required by specific audiences.

Monitor Service Order Status

Process Identifier: 1.4.5.7.1

Hierarchy Level: 4

Brief Description:

responsible for continuously monitoring the status of service orders; record, analyze and assess the service order status changes

Extended Description:

Not used for this process element

Distribute Service Order Notification

Process Identifier: 1.4.5.7.2

Hierarchy Level: 4

Brief Description:

Distribute notifications of service order status changes to the required parties.

Extended Description:

Provide notifications of any changes the status of service orders. Notifications are used to notify the owner of the current status of the order and also distributed to the other parties who require it. Notification lists are managed and maintained by the Enable Service Configuration & Activation processes.

Distribute Service Provisioning Reports

Process Identifier: 1.4.5.7.3

Hierarchy Level: 4

Brief Description:

Provide management reports and any specialized summaries of the efficiency and effectiveness of the overall Service Configuration & Activation process. These specialized summaries could be specific reports required by specific audiences.

Extended Description:

Not used for this process element

Close Service Order

Process Identifier: 1.4.5.8

Hierarchy Level: 3

Brief Description:

Close a service order when the service provisioning activities have been completed

Extended Description:

The objective of the Close Service Order processes is to close a service order when the service provisioning activities have been completed.

These processes monitor the status of all open service orders, and recognize that a service order is ready to be closed when the status is changed to completed.

Recover Service

Process Identifier: 1.4.5.9

Hierarchy Level: 3

Brief Description:

Recover specific services that are no longer required by customers.

Extended Description:

The responsibility of the Recover Service processes is to recover specific services that are no longer required by customers.

These processes follow recovery plans specified by the external party, or against recovery plans developed by the service provider.

Where appropriate recovery plans are not available these processes are responsible for developing appropriate recovery plans.

Where recovery of services is likely to impact other in-use specific services, this process is responsible for providing appropriate notification of the recovery proposal and ensuring authorization is received to proceed with the recovery plan. When the recovery activity is about to commence, these processes are responsible for notifying when recovery work is commencing and when it is completed.

When recovered, the specific services and/or associated service specific parameters will be marked as unallocated.

Develop Service Recovery Plan

Process Identifier: 1.4.5.9.1

Hierarchy Level: 4

Brief Description:

Where appropriate recovery plans are not available this process is responsible for developing appropriate recovery plans.

Extended Description:

Not used for this process element

Provide Service Recovery Proposal Notification

Process Identifier: 1.4.5.9.2

Hierarchy Level: 4

Brief Description:

Where recovery of services is likely to impact other in-use specific services, this process is responsible for providing appropriate notification of the recovery proposal.

Extended Description:

Not used for this process element

Request Service Recovery Authorization

Process Identifier: 1.4.5.9.3

Hierarchy Level: 4

Brief Description:

Ensure authorization is received to proceed with the recovery plan.

Extended Description:

Not used for this process element

Commence Service Recovery

Process Identifier: 1.4.5.9.4

Hierarchy Level: 4

Brief Description:

When the recovery activity is about to commence, this processes is responsible for notifying when recovery work is commencing.

Extended Description:

Not used for this process element

Complete Service Recovery

Process Identifier: 1.4.5.9.5

Hierarchy Level: 4

Brief Description:

This process is responsible for notifying when it is completed.

When recovered, the specific services and/or associated service specific parameters will be marked as unallocated.

Extended Description:

Not used for this process element

Reserve Service Parameters

Process Identifier: 1.4.5.2.2

Hierarchy Level: 4

Brief Description:

Reserve required service parameters for a defined period based on business rules and commitments.

Extended Description:

Depending on business rules, and on any specific levels of commitment contained in the initiating service order or service design request, these processes may reserve specific service parameters linked to the initiating service order or service design request for a period of time

Service Problem Management

Process Identifier: 1.4.6

Hierarchy Level: 2

Brief Description:

Respond immediately to customer-affecting service problems or failures in order to minimize their effects on customers, and to invoke the restoration of the service, or provide an alternate service as soon as possible.

Extended Description:

Service Problem Management processes are responsible for the management of problems associated with specific services. The objective of these processes is to respond immediately to reported service problems or failures in order to minimize their effects on customers, and to invoke the restoration of the service, or provide an alternate service as soon as possible.

Responsibilities of the Service Problem Management processes include, but are not limited to:

- Detecting, analyzing, managing and reporting on service alarm event notifications;
- Initiating and managing service trouble reports;

- Performing service problem localization analysis;
- Correcting and resolving service problems;
- Reporting progress on service trouble reports to other processes;
- Assigning & tracking service problem testing and recovery activities
- Managing service problem jeopardy conditions

Service Problem Management processes perform analysis, decide on the appropriate actions/responses and carry them out with the intent of restoring normal operation on specific services.

However these activities need to interact with the Problem Handling processes, as the latter have a view on customer impact. Service Problem Management processes are responsible for informing Problem Handling processes of any potential customer problems. Where the original report arose as a result of customer problems, the Service Problem Management processes may be coordinated by Problem Handling processes.

Figure 6: Service Problem Management Children

Create Service Trouble Report

Process Identifier: 1.4.6.1

Hierarchy Level: 3

Brief Description:

Create a new service trouble report.

Extended Description:

The objective of the Create Service Trouble Report process is to create a new service trouble report.

A new service trouble report may be created as a result of service alarm event notification analysis, and subsequent creation of new service alarm event records, undertaken by the Survey & Analyze Service Problem processes, or at the request of analysis undertaken by other processes in the Customer (in particular a Customer Problem Report can generate one or more Service Trouble Reports), Service or Resource Domains which detect that some form of failure has occurred for which service restoration activity is required to restore normal operation.

If the service trouble report is created as a result of a notification or request from processes other than the Survey & Analyze Service Problem processes, the Create Service Trouble Report processes are responsible for converting the received information into a form suitable for the Service Problem Management processes, and for requested additional information if required.

These processes will make estimates of the time to restore service which will be included in the new service trouble report so that other processes can gain access to this information.

Generate Service Problem

Process Identifier: 1.4.6.1.1

Hierarchy Level: 4

Brief Description:

This process creates a new Service Trouble report.

Extended Description:

Not used for this process element

Convert Report To Service Problem Format

Process Identifier: 1.4.6.1.2

Hierarchy Level: 4

Brief Description:

Convert incoming trouble information into the format required for service problem management.

Extended Description:

If the service trouble report is created as a result of a notification or request from processes other than the Survey & Analyze Service Problem processes, this process is responsible for converting the received information into a form suitable for the Service Problem Management processes, and for requested additional information if required.

Estimate Time For Restoring Service

Process Identifier: 1.4.6.1.3

Hierarchy Level: 4

Brief Description:

This process estimates the time to restore service which is included in the new Service Trouble report so that other processes can gain access to this information.

Extended Description:

Not used for this process element

Diagnose Service Problem

Process Identifier: 1.4.6.2

Hierarchy Level: 3

Brief Description:

Identify the root cause of the specific service problem, including those service problems related to security events.

Extended Description:

The objective of the Diagnose Service Problem processes is to identify the root cause of the specific service problem. These processes are invoked by the Track & Manage Service Problem processes.

The responsibilities of these processes include, but are not limited to:

- Verifying whether the service configuration matches the appropriate product features;
- Performing diagnostics against the specific services;
- Running tests against the specific services;
- Starting and stopping audits against specific services

- Scheduling routine testing of the specific services.

The Diagnose Service Problem processes will make the results of the root cause analysis available to other processes. The Diagnose Service Problem processes will update the open service trouble report, as required during the assessment, and when the root cause has been identified.

When the process is complete the Diagnose Service Problem processes will notify the Track & Manage Service Problem processes.

Verify Service Configuration

Process Identifier: 1.4.6.2.1

Hierarchy Level: 4

Brief Description:

This process verifies whether the service configuration matches the appropriate product features.

Extended Description:

Not used for this process element

Perform Specific Service Problem Diagnostics

Process Identifier: 1.4.6.2.2

Hierarchy Level: 4

Brief Description:

This process performs diagnostics against the specific services.

Extended Description:

Not used for this process element

Perform Specific Service Problem Tests

Process Identifier: 1.4.6.2.3

Hierarchy Level: 4

Brief Description:

This process runs tests against the specific services.

Extended Description:

Not used for this process element

Schedule Routine Service Problem Tests [deleted]

Process Identifier: (This Process ID has been deliberately unused!)

Hierarchy Level: 4

Brief Description:

This process schedules routine testing of the specific services.

Extended Description:

Not used for this process element

Stop And Start Audit On Services

Process Identifier: 1.4.6.2.5

Hierarchy Level: 4

Brief Description:

This process starts and stops audits against specific services.

Extended Description:

Not used for this process element

Notify T&M Root Cause Service Problem

Process Identifier: 1.4.6.2.6

Hierarchy Level: 4

Brief Description:

Notify tracking and management processes of identified root causes for service problems.

Extended Description:

This process makes the results of the root cause analysis available to other processes. It updates the open Service Trouble report, as required during the assessment, and when the root cause has been identified. This process notifies the Track & Manage Service Problem processes.

Categorize Service Problem

Process Identifier: 1.4.6.2.7

Hierarchy Level: 4

Brief Description:

This process is responsible for categorizing the service problem according to the type of the problem, impact, and standardized criteria at SM&O level. Moreover, this activity will be carried out with appropriate diligence, in order to provide inputs to the "Track & Manage Service Problem" process.

Extended Description:

This process is responsible for categorizing the service problem according to the type of the problem, impact, and standardized criteria at SM&O level. Moreover, this activity will be carried out with appropriate diligence, in order to provide inputs to the "Track & Manage Service Problem" process.

Correct & Resolve Service Problem

Process Identifier: 1.4.6.3

Hierarchy Level: 3

Brief Description:

Restore the service to a normal operational state as efficiently as possible

Extended Description:

The objective of the Correct & Resolve Service Problem processes is to restore the service to a normal operational state as efficiently as possible.

Based on the nature of the service failure leading to the associated service alarm event notification, automatic restoration procedures might be triggered. Manual restoration activity is assigned to the Correct & Resolve Service Problem processes from the Track & Manage Service Problem processes.

Depending on the nature of the specific service failure, these processes may possibly re-assign services or re-configure service parameters.

For large service failures requiring extensive re-assignment and/or re-configuration activity to restore normal operation, these processes will attempt to implement work-arounds to recover the specific service operation. In these circumstances, recovery of normal operation may require invocation of the Support Service Problem Management processes.

They will also report successful restoration of normal service operation, restoration through temporary work-arounds or an unsuccessful attempt at service restoration to Track & Manage Service Problem through updates to the associated service trouble report.

Reassign / Reconfigure Failed Service

Process Identifier: 1.4.6.3.1

Hierarchy Level: 4

Brief Description:

Reassign or reconfigure failed services to restore normal operation where possible.

Extended Description:

Depending on the nature of the specific service failure, these processes may possibly re-assign services or re-configure service and/or security parameters. It also reports successful restoration of normal operation or an unsuccessful attempt at restoration to Track & Manage Service Problem through updates to the associated Service Trouble report.

Manage Service Restoration

Process Identifier: 1.4.6.3.2

Hierarchy Level: 4

Brief Description:

Manage restoration activities needed to recover normal service operation after a failure.

Extended Description:

Based on the nature of the service failure leading to the associated service alarm event notification, this restoration process might be triggered. It reports successful restoration of normal operation or an unsuccessful attempt at restoration to Track & Manage Service Problem through updates to the associated Service Trouble report.

Implement Service Problem Work Arounds

Process Identifier: 1.4.6.3.3

Hierarchy Level: 4

Brief Description:

Implement temporary workarounds to recover service operation during major service failures.

Extended Description:

For large service failures requiring extensive re-assignment and/or re-configuration activity to restore normal operation, this process will attempt to implement workarounds to recover the specific service operation. It also reports restoration through temporary workarounds or an unsuccessful attempt at restoration to Track & Manage Service Problem through updates to the associated Service Trouble report.

Invoke Support Service Problem Management Processes

Process Identifier: 1.4.6.3.4

Hierarchy Level: 4

Brief Description:

Invoke support service problem management processes to restore normal service operation.

Extended Description:

This process recovers normal operation by invocation of the Support Service Problem Management processes. It also reports successful restoration of normal operation or an unsuccessful attempt at restoration to Track & Manage Service Problem through updates to the associated Service Trouble report.

Review Major Service Problem

Process Identifier: 1.4.6.3.5

Hierarchy Level: 4

Brief Description:

To review the resolution of service problems that have been categorized as major impact, in order to prevent recurrence and learn lessons for the future.

Extended Description:

To review the resolution of service problems that have been categorized as major impact, in order to prevent recurrence and learn lessons for the future.

Track & Manage Service Problem

Process Identifier: 1.4.6.4

Hierarchy Level: 3

Brief Description:

Ensure that testing, repair and restoration activities are assigned, coordinated and tracked efficiently, and that escalation is invoked as required for any open service trouble reports in jeopardy

Extended Description:

The purpose of the Track & Manage Service Problem processes is to ensure that testing, repair and restoration activities are assigned, coordinated and tracked efficiently, and that escalation is invoked as required for any open service trouble reports in jeopardy.

Responsibilities of these processes include, but are not limited to:

- Initiating first-in testing using automated remote testing capabilities;
- Adding additional information to an open service trouble report based on the first-in testing;
- Scheduling, assigning and coordinating repair and restoration activities;
- Generating the respective resource trouble report creation request(s) to Create Resource Trouble Report based on specific service trouble reports;
- Initiate any final testing to confirm clearance of the service problem;
- Undertake necessary tracking of the execution progress;
- Modifying information in an existing service trouble report based on assignments;
- Modifying the service trouble report status;
- Canceling a service trouble report when the specific problem was related to a false service alarm event
- Monitoring the jeopardy status of open service trouble reports, and escalating service trouble reports as necessary.

Note that some specific resource components may be owned and managed by other parties. In these cases the Track & Manage Service Problem process is responsible for initiating requests, through Party Problem Handling processes for restoration and recovery by the party related to the specific resource components.

These processes will co-ordinate all the actions necessary in order to guarantee that all tasks are finished at the appropriate time and in the appropriate sequence.

The Track & Manage Service Problem processes are responsible for engaging external parties in correction and recovery activities when:

- higher level expertise and/or higher level support is required to resolve the service problem, (which may be automatic in the case of highest priority service problems);
- the specific service has been purchased from an external party (as in an interconnect service).
- the specific service is delivered by an external party.

Where the engagement with an external party is for purchased or delivered services, as the case may be, the tracking and management of the party problem resolution activity is actually performed by the Party Problem Handling processes, with the Track & Manage Service Problem processes relegated to an overall coordination role. The Track & Manage Service Problem processes will also inform the Close Service Problem processes by modifying the service trouble report status to cleared when the service problem has been resolved.

Coordinate Service Problem

Process Identifier: 1.4.6.4.1

Hierarchy Level: 4

Brief Description:

Coordinate repair and restoration activities for service problems and manage report status.

Extended Description:

This process coordinates all the actions necessary in order to guarantee that all tasks are finished at the appropriate time and in the appropriate sequence. It schedules, assigns and coordinates repair and restoration activities, undertakes necessary tracking of the execution progress, modifies information in an existing Service Trouble report based on assignments, and modifies the Service Trouble report status.

Perform First in Service Testing

Process Identifier: 1.4.6.4.2

Hierarchy Level: 4

Brief Description:

This process initiates first-in testing using automated remote testing capabilities, and adds additional information to an open Service Trouble report based on the first-in testing.

Extended Description:

Not used for this process element

Cancel Service Problem

Process Identifier: 1.4.6.4.3

Hierarchy Level: 4

Brief Description:

This process cancels a Service Trouble report when the specific trouble was related to a false alarm event.

Extended Description:

Not used for this process element

Escalate/End Service Problem

Process Identifier: 1.4.6.4.4

Hierarchy Level: 4

Brief Description:

Escalate unresolved service problems or end handling in accordance with agreed rules.

Extended Description:

This process provides the escalations between support levels and actors when a service problem cannot be solved by the current assigned group. Therefore, the escalation can be carried out between supports levels at SM&O level, or, it can be escalated to others actors, such as, resource provider or other external parties. It is essential the ability to rapidly escalate service problems according to clear and agreed rules.

Perform Final Service Test

Process Identifier: 1.4.6.4.5

Hierarchy Level: 4

Brief Description:

This process initiates any final testing to confirm clearance of the Service Problem.

Extended Description:

Not used for this process element

Prioritize Service Problem

Process Identifier: 1.4.6.4.6

Hierarchy Level: 4

Brief Description:

This process is responsible for assigning the prioritization to service problem in order to establish an order for managing it. The prioritization is assigned (usually automatically) according to criteria, such as, categorization, services affected and SL

Extended Description:

This process is responsible for assigning the prioritization to service problem in order to establish an order for managing it. The prioritization is assigned (usually automatically) according to criteria, such as, categorization, services affected and SLAs.

Report Service Problem

Process Identifier: 1.4.6.5

Hierarchy Level: 3

Brief Description:

Monitor the status of service trouble reports, provide notifications of any changes and provide management reports. This includes service trouble caused by security events.

Extended Description:

The objective of the Report Service Problem processes is to monitor the status of service trouble reports, provide notifications of any changes and provide management reports.

These processes are responsible for continuously monitoring the status of service trouble reports and managing notifications to processes and other parties registered to receive notifications of any status changes, for example, Service Quality Management and Customer QoS/SLA Management processes. Notification lists are managed and maintained by the Support Service Problem Management processes.

These processes record, analyze and assess the service trouble report status changes to provide management reports and any specialized summaries of the efficiency and effectiveness of the overall Service Problem Management process. These specialized summaries could be specific reports required by specific audiences.

These processes will make the necessary reports about the problem that occurred, the root cause and the activities carried out for restoration.

Monitor Service Problem

Process Identifier: 1.4.6.5.1

Hierarchy Level: 4

Brief Description:

Monitor service trouble report status and manage notifications to registered parties.

Extended Description:

This process is responsible for continuously monitoring the status of Service Trouble reports and managing notifications to processes and other parties registered to receive notifications of any status changes, for example, Resource Performance Management and Service Quality Management. Notification lists are managed and maintained by the Support Service Problem Management processes.

Distribute Service Problem Notifications

Process Identifier: 1.4.6.5.2

Hierarchy Level: 4

Brief Description:

This process makes the necessary reports about the Service Problem that occurred, the root cause and the activities carried out for restoration.

Extended Description:

Not used for this process element

Distribute Service Problem Management Reports & Summaries

Process Identifier: 1.4.6.5.3

Hierarchy Level: 4

Brief Description:

Distribute management reports and summaries on service problem status and process effectiveness.

Extended Description:

This process records, analyzes and assesses the Service Performance Degradation Report status changes to provide management reports and any specialized summaries of the efficiency and effectiveness of the overall Service Quality Management process. These specialized summaries could be specific reports required by specific audiences.

Close Service Trouble Report

Process Identifier: 1.4.6.6

Hierarchy Level: 3

Brief Description:

Close a service trouble report when the service problem has been resolved

Extended Description:

The objective of the Close Service Trouble Report processes is to close a service trouble report when the service problem has been resolved.

These processes monitor the status of all open service trouble reports, and recognize that a service trouble report is ready to be closed when the status is changed to cleared.

Survey & Analyze Service Problem

Process Identifier: 1.4.6.7

Hierarchy Level: 3

Brief Description:

Monitor service alarm event notifications and manage service alarm event records in real-time. Service alarm events include security event alarms.

Extended Description:

The objective of the Survey & Analyze Service Problem processes is to monitor service alarm event notifications and manage service alarm event records in real-time.

Responsibilities of the Survey & Analyze Service Problem processes include, but are not limited to:

- Detecting and collecting service alarm event notifications;
- Initiating and managing service alarm event records;
- Performing service alarm event notification localization analysis;
- Correlating and filtering service alarm event records;
- Reporting service alarm event record status changes to other processes;
- Managing service alarm event record jeopardy conditions.

Service alarm event notification analysis encompasses the identification of the service alarm event in terms of reporting entity and nature of the service alarm event. It will then analyze the service alarm events based on a number of criteria and then suppress redundant, transient or implied service alarm events by means of filtering and correlation. It includes the notification of new service alarm event records, or status changes of previously reported service alarm event records, as well as abatement messages when service alarm event records have been cleared.

The analysis will correlate service alarm event notifications to planned outage notifications to remove false service alarm event notifications arising as a result of the planned outage activity.

These processes may determine that a service alarm event notification may represent a customer impacting condition. In these circumstances this process is responsible for indicating a potential customer problem to the Problem Handling processes. As a part of this indication this process is responsible for identifying the impacted deployed product instances associated with the service instances presenting alarm event notifications and passing this information to the Problem Handling processes.

Service alarm event record correlation and filtering encompasses the correlation of redundant, transient or implied service alarm event notifications with a specific “root cause” service alarm event notification and associated service alarm event record.

The Survey & Analyze Service Problem processes might trigger a well-defined action based on specific service alarm event notification information as well as the non-arrival of service alarm event notification information after a specific time interval has elapsed.

These processes are also responsible for monitoring and triggering the appropriate action when a service alarm event record is not cleared within a pre-defined period of time.

Manage Service Alarm Event Notifications

Process Identifier: 1.4.6.7.1

Hierarchy Level: 4

Brief Description:

Manage service alarm event notifications and identify potential customer impacts.

Extended Description:

This process may determine that a service alarm event notification may represent a customer impacting condition. In these circumstances this process is responsible for indicating a potential customer problem to the Problem Handling processes. As a part of this indication this process is responsible for identifying the impacted deployed product instances associated with the service instances presenting alarm event notifications and passing this information to the Problem Handling processes.

Filter Service Alarm Event Notifications

Process Identifier: 1.4.6.7.2

Hierarchy Level: 4

Brief Description:

This process encompasses the correlation of redundant, transient or implied service alarm event notifications with a specific “root cause” service alarm event notification and associated service alarm event record.

Extended Description:

Not used for this process element

Correlate Service Alarm Event Notifications

Process Identifier: 1.4.6.7.3

Hierarchy Level: 4

Brief Description:

Correlate service alarm event notifications to identify root causes and remove false alarms.

Extended Description:

This process encompasses the correlation of redundant, transient or implied service alarm event notifications with a specific ?root cause? service alarm event notification and associated service alarm event record. This process correlates service alarm event notifications to planned outage notifications to remove false service alarm event notifications arising as a result of the planned outage activity.

Abate Service Alarm Event Records

Process Identifier: 1.4.6.7.4

Hierarchy Level: 4

Brief Description:

This process includes the notification of new service alarm event records, or status changes of previously reported service alarm event records, as well as abatement messages when service alarm event records have been cleared.

Extended Description:

Not used for this process element

Trigger Defined Service Alarm Action

Process Identifier: 1.4.6.7.5

Hierarchy Level: 4

Brief Description:

Trigger predefined actions based on service alarm notifications or expected alarm conditions.

Extended Description:

This process triggers a well-defined action based on specific service alarm event notification information as well as the non-arrival of service alarm event notification information after a specific time interval has elapsed. This process is also responsible for monitoring and triggering the appropriate action when a service alarm event record is not cleared within a pre-defined period of time.

Monitor Service Alarms Events

Process Identifier: 1.4.6.7.6

Hierarchy Level: 4

Brief Description:

This process is responsible for collecting and monitoring events and alarms provided by services through systems and monitoring tools.

Extended Description:

This process is responsible for collecting and monitoring events and alarms provided by services through systems and monitoring tools.

Categorize Service Alarm Event

Process Identifier: 1.4.6.7.7

Hierarchy Level: 4

Brief Description:

This process is responsible for categorizing the service alarm events in order to support the management, filtering and correlation of events at SM&O level.

Extended Description:

This process is responsible for categorizing the service alarm events in order to support the management, filtering and correlation of events at SM&O level.

Service Performance Management

Process Identifier: 1.4.7

Hierarchy Level: 2

Brief Description:

Service Performance Management business process directs and controls activities that define Service Performance Objectives (e.g. Service Availability, Service Quality, Process efficiency, Service Reliability, etc.), sets performance goals & targets, track performance trends, monitor performance, analyze performance, control performance (optimize, troubleshoot), report or communicate performance, and manage consequences of service performance.

Extended Description:

Service Performance Management business process directs and controls activities that define Service Performance Objectives (e.g. Service Availability, Service Quality, Process efficiency, Service Reliability, etc.), sets performance goals & targets, track performance trends, monitor performance, analyze performance, control performance (optimize, troubleshoot), report or communicate performance, and manage consequences of service performance. Service Performance Management business process support the Enterprise Performance Management goals. These goals include quality, efficiency, reliability, availability, monetary (cost, profitability, etc.) mandates along with any productivity requirement of service delivery and service engagement by the organization. It includes identifying, establishing the applying the methodologies that define and manage service performance criteria to meet business objectives.

This process was renamed in 23.5 it was named Service Quality Management

Figure 7: Service Performance Management Children

Manage Service Performance Requirement

Process Identifier: 1.4.7.6

Hierarchy Level: 3

Brief Description:

Manage Service Performance Requirement business activity controls activities and underlying tasks that define the performance requirements for a service. It sets the standards and expectations for service performance.

Extended Description:

Manage Service Performance Requirement business activity controls activities and underlying tasks that define the performance requirements for a service. It sets the standards and expectations for service performance.

Manage Service Performance Requirement's goal is to ensure that the service meets or exceeds predefined performance standards. It involves setting service performance goals and making changes to these goals as necessary. It also includes defining the information required to measure service performance.

Define Service Performance Requirement

Process Identifier: 1.4.7.6.1

Hierarchy Level: 4

Brief Description:

Define Service Performance Requirement Information involves defining the information required to measure service performance.

Extended Description:

Define Service Performance Requirement Information involves defining the information required to measure service performance.

Define Service Performance Requirement Information's goal is to ensure that there is a clear and true facts to measure and track service performance.

Set Service Performance Goals

Process Identifier: 1.4.7.6.1.1

Hierarchy Level: 5

Brief Description:

Set Service Performance Goals is responsible for setting the performance goals for a service.

Extended Description:

Set Service Performance Goals is responsible for setting the performance goals for a service.

Set Service Performance Goals ensures that the service performance goals that are defined are registered and acknowledged. It involves laying out service performance goals and supporting any changes to these goals as necessary.

Change service Performance Goals

Process Identifier: 1.4.7.6.1.2

Hierarchy Level: 5

Brief Description:

Change Service Performance Goals is responsible for making changes to the service performance goals, as necessary.

Extended Description:

Change Service Performance Goals is responsible for making changes to the service performance goals, as necessary.

Change Service Performance Goals ensures that the service performance goals are always aligned with the current needs and objectives of the business.

Define Service Performance Requirement Information

Process Identifier: 1.4.7.6.2

Hierarchy Level: 4

Brief Description:

Define Service Performance Requirement Information involves defining the information required to measure service performance.

Extended Description:

Define Service Performance Requirement Information involves defining the information required to measure service performance.

Define Service Performance Requirement Information's goal is to ensure that there is a clear and true facts to measure and track service performance.

Manage Service Performance Plan

Process Identifier: 1.4.7.7

Hierarchy Level: 3

Brief Description:

Manage Service Performance Plan business activity controls the creating, implementing, improving, and terminating of plan(s) for service performance.

Extended Description:

Manage Service Performance Plan business activity controls the creating, implementing, improving, and terminating of plan(s) for service performance.

Manage Service Performance Plan's goal is to ensure that there is a clear and effective plan in place for managing service performance. This includes defining the plan, implementing it, making improvements to the plan over time, and terminating the plan when it is no longer needed.

Define Services Performance Plan

Process Identifier: 1.4.7.7.1

Hierarchy Level: 4

Brief Description:

Define Services Performance Plan is responsible for creating a plan for service performance.

Extended Description:

Define Services Performance Plan is responsible for creating a plan for service performance.

Define Services Performance Plan's goal is to ensure that there is a clear and effective plan in place for managing service performance.

Implement Service Performance Plan

Process Identifier: 1.4.7.7.2

Hierarchy Level: 4

Brief Description:

Implement Service Performance Plan is responsible for putting the service performance plan into action.

Extended Description:

Implement Service Performance Plan is responsible for putting the service performance plan into action.

Implement Service Performance Plan's goal is to ensure that the plan is effectively implemented and that it leads to linked business outcomes.

Improve Service Performance Plan

Process Identifier: 1.4.7.7.3

Hierarchy Level: 4

Brief Description:

Improve Service Performance Plan is responsible for making improvements to the service performance plan over time.

Extended Description:

Improve Service Performance Plan is responsible for making improvements to the service performance plan over time.

Improve Service Performance Plan ensures that the plan remains effective and relevant as the needs and objectives of the business evolve.

Terminate Service Performance Plan

Process Identifier: 1.4.7.7.4

Hierarchy Level: 4

Brief Description:

Terminate Service Performance Plan is responsible for ending the service performance plan when it is no longer needed.

Extended Description:

Terminate Service Performance Plan is responsible for ending the service performance plan when it is no longer needed. Terminate Service Performance Plan's goal is to ensure that resources judiciously allocated and effective. It is essentially to make sure that resources are not wasted on unnecessary plans or plans that are not effectively supporting business goals and outcome.

Manage Service Performance Measure

Process Identifier: 1.4.7.8

Hierarchy Level: 3

Brief Description:

Manage Service Performance Measure business activity controls the definition, change, and removal of measures for service performance.

Extended Description:

Manage Service Performance Measure business activity controls the definition, change, and removal of measures for service performance.

Manage Service Performance Measure's goal is to ensure that service performance is accurately measured and tracked. This includes defining what measures will be used, making changes to these measures as necessary, and removing measures that are no longer relevant or useful.

Define Service Performance Measure

Process Identifier: 1.4.7.8.1

Hierarchy Level: 4

Brief Description:

Define Service Performance Measure is responsible for defining what measures will be used to track service performance.

Extended Description:

Define Service Performance Measure is responsible for defining what measures will be used to track service performance.

Define Service Performance Measure's goal is to ensure that service performance is accurately measured and tracked.

Change Service Performance Measure

Process Identifier: 1.4.7.8.2

Hierarchy Level: 4

Brief Description:

Change Service Performance Measure is responsible for making modifications to performance measures as necessary.

Extended Description:

Change Service Performance Measure is responsible for making modifications to performance measures as necessary.

Change Service Performance Measure's goal is to ensure that the measures used are approved, and remain relevant and useful as the service performance needs and objectives of the business evolve.

Remove Service Performance Measure

Process Identifier: 1.4.7.8.3

Hierarchy Level: 4

Brief Description:

Remove Service Performance Measure involves removing measures that are no longer relevant or useful.

Extended Description:

Remove Service Performance Measure involves removing measures that are no longer relevant or useful.

Remove Service Performance Measure's goal is to ensure that service performance measures can be appropriately terminated from use in service performance measures in a timely manner.

Manage Service Performance Analysis

Process Identifier: 1.4.7.9

Hierarchy Level: 3

Brief Description:

Manage Service Performance Analysis business activity controls activities and tasks supporting assessment, investigating, auditing, and reporting on service performance.

Extended Description:

Manage Service Performance Analysis business activity controls activities and tasks supporting assessment, investigating, auditing, and reporting on service performance.

Manage Service Performance Analysis's goal is to gain a deep understanding of service performance. This includes assessing current performance levels, investigating any issues or anomalies, auditing the accuracy and effectiveness of performance measures, and reporting on the results of these analyses.

Assess Service Performance

Process Identifier: 1.4.7.9.1

Hierarchy Level: 4

Brief Description:

Assess Service Performance is responsible for evaluating current performance levels.

Extended Description:

Assess Service Performance is responsible for evaluating current performance levels.

Assess Service Performance's goal is to gain a deep understanding of how well the service is currently performing.

Investigate Service Performance

Process Identifier: 1.4.7.9.2

Hierarchy Level: 4

Brief Description:

Investigate Service Performance is responsible for looking into any issues or anomalies in service performance.

Extended Description:

Investigate Service Performance is responsible for looking into any issues or anomalies in service performance. Investigate Service Performance goal is to identify and address any problems that may be affecting service performance.

Audit Service Performance

Process Identifier: 1.4.7.9.3

Hierarchy Level: 4

Brief Description:

Audit Service Performance is responsible for checking the accuracy and effectiveness of service performance information and measures.

Extended Description:

Audit Service Performance is responsible for checking the accuracy and effectiveness of service performance information and measures.

Audit Service Performance goal is to ensure that the measures used are effective, accurate and reflective of service performance objectives.

Report Service Performance Analysis

Process Identifier: 1.4.7.9.4

Hierarchy Level: 4

Brief Description:

Report Service Performance Analysis is responsible for reporting on the results of service performance analyses.

Extended Description:

Report Service Performance Analysis is responsible for reporting on the results of service performance analyses.

Report Service Performance Analysis's goal is to communicate information about service performance to relevant stakeholders.

Manage Service Performance Control

Process Identifier: 1.4.7.10

Hierarchy Level: 3

Brief Description:

Manage Service Performance Control business activity is responsible for monitoring, evaluating, and improving service performance.

Extended Description:

Manage Service Performance Control business activity is responsible for monitoring, evaluating, and improving service performance.

Manage Service Performance Control's goal is to maintain control over service performance. This includes monitoring performance on an ongoing basis, evaluating whether performance goals are being met, and providing support for making improvements as necessary.

Monitor Service Performance

Process Identifier: 1.4.7.10.1

Hierarchy Level: 4

Brief Description:

Monitor Service Performance is responsible for keeping a watchful eye on service performance on an ongoing basis.

Extended Description:

Monitor Service Performance is responsible for keeping a watchful eye on service performance on an ongoing basis.

Monitor Service Performance goal is to identify any issues or anomalies as soon as they occur due to any service performance characteristics objective (service quality monitoring, service availability monitoring, service reliability monitoring, service cost monitoring, and service efficiency monitoring etc.).

Figure 8: Monitor Service Performance Children

Collect Service Performance Information

Process Identifier: 1.4.7.10.1.1

Hierarchy Level: 5

Brief Description:

Collect Service Performance Information is responsible for gathering data and facts on service performance.

Extended Description:

Collect Service Performance Information is responsible for gathering data and facts on service performance.

Collect Service Performance Information ensures that there is accurate and up-to-date information available on how the service is performing.

Track Service Performance

Process Identifier: 1.4.7.10.1.2

Hierarchy Level: 5

Brief Description:

Track Service Performance task is responsible for tracing or keeping an eye on service performance over time.

Extended Description:

Track Service Performance task is responsible for tracing or keeping an eye on service performance over time.

Track Service Performance goal is to identify and follow any trends or patterns in service performance, which can help in making informed decisions about how to improve the performance of service.

Evaluate Service Performance Goal

Process Identifier: 1.4.7.10.2

Hierarchy Level: 4

Brief Description:

Evaluate Service Performance Goal is responsible for assessing service performance goals are attained or being met.

Extended Description:

Evaluate Service Performance Goal is responsible for assessing service performance goals are attained or being met. Evaluate Service Performance goal is to ensure that the service is meeting or exceeding their predefined performance requirements and standards.

Figure 9: Evaluate Service Performance Children

Measure Service Performance

Process Identifier: 1.4.7.10.2.1

Hierarchy Level: 5

Brief Description:

Measure Service Performance task involves measuring how well the service is performing against its predefined performance standards.

Extended Description:

Measure Service Performance task involves measuring how well the service is performing against its predefined performance standards.

Measure Service Performance task goal is to provide a clear and objective record or observation of service performance to support any assessment of service performance.

Review Service Performance Level

Process Identifier: 1.4.7.10.2.2

Hierarchy Level: 5

Brief Description:

Review Service Performance Level task is responsible for surveying, reviewing, and making a judgment of service performance.

Extended Description:

Review Service Performance Level task is responsible for surveying, reviewing, and making a judgment of service performance. Assess Service Performance goal is to gain a deep understanding of how well the service is performing and identify any areas where improvements could be made.

Improve Service Performance

Process Identifier: 1.4.7.10.3

Hierarchy Level: 4

Brief Description:

Improve Service Performance process involves enhancing, advancing, and refining service performance to make it better as necessary.

Extended Description:

Improve Service Performance process involves enhancing, advancing, and refining service performance to make it better as necessary.

Improve Service Performance goal is to facilitate superior service performance results. It supports the need to continuously improve service performance.

Figure 10: Improve Service Performance Children

Plan Service Performance Improvement

Process Identifier: 1.4.7.10.3.1

Hierarchy Level: 5

Brief Description:

Plan Service Performance Improvement task is responsible for creating a plan for improving service performance.

Extended Description:

Plan Service Performance Improvement task is responsible for creating a plan for improving service performance.

Plan Service Performance Improvement's goal is to ensure that there are detailed proposals for improving service performance. This includes ensuring plans are clear and effective to support service performance management strategies.

Implement Service Performance Improvement

Process Identifier: 1.4.7.10.3.2

Hierarchy Level: 5

Brief Description:

Implement Service Performance Improvement task is responsible for putting the service performance improvement plan into action/motion.

Extended Description:

Implement Service Performance Improvement task is responsible for putting the service performance improvement plan into action/motion.

Implement Service Performance Improvement's goal is to ensure that proposed actions are effectively orchestrated and executed for improvement to service performance.

Pilot Service Performance Improvement

Process Identifier: 1.4.7.10.3.2.1

Hierarchy Level: 6

Brief Description:

Pilot Service Performance Improvement task is responsible for testing the service performance improvement plan on a small scale before it is fully implemented.

Extended Description:

Pilot Service Performance Improvement task is responsible for testing the service performance improvement plan on a small scale before it is fully implemented.

Pilot Service Performance Improvement goal is to identify any potential issues or challenges that may arise during the implementation of the plan. It provides an opportunity to make necessary adjustments to the plan before it is rolled out on a larger scale.

Execute Service Performance Improvement

Process Identifier: 1.4.7.10.3.2.2

Hierarchy Level: 6

Brief Description:

Execute Service Performance Improvement task is responsible for putting the service performance improvement plan into action on a full scale.

Extended Description:

Execute Service Performance Improvement task is responsible for putting the service performance improvement plan into action on a full scale.

Execute Service Performance Improvement goal is to improve service performance according to the strategies outlined in the plan. It involves implementing the strategies and monitoring their impact on service performance.

Co-ordinate Service Operational Handover

Process Identifier: 1.4.2.7.1

Hierarchy Level: 4

Brief Description:

Coordinate handover of deployed service infrastructure to operational control.

Extended Description:

These processes co-ordinate the processes involved in handover of deployed service infrastructure to operational control, including the management and coordination of all stakeholders required to gain approval and acceptance of the handover.

Manage Service Performance Reporting

Process Identifier: 1.4.7.11

Hierarchy Level: 3

Brief Description:

Manage Service Performance Reporting business activity is responsible for creating, changing, and publishing reports on service performance.

Extended Description:

Manage Service Performance Reporting business activity is responsible for creating, changing, and publishing reports on service performance.

Manage Service Performance Reporting's goal is to communicate information about service performance to relevant stakeholders. This includes creating reports that accurately reflect current performance levels, making changes to these reports as necessary, and publishing these reports in a timely manner.

Create Service Performance Report

Process Identifier: 1.4.7.11.1

Hierarchy Level: 4

Brief Description:

Create Service Performance Report process involves creating reports that accurately reflect current performance levels.

Extended Description:

Create Service Performance Report process involves creating reports that accurately reflect current performance levels.

Create Service Performance Report's goal is to communicate information (results) about service performance to relevant stakeholders.

Change Service Performance Report

Process Identifier: 1.4.7.11.2

Hierarchy Level: 4

Brief Description:

Change Service Performance Report is responsible for making modifications to service performance reports as necessary.

Extended Description:

Change Service Performance Report is responsible for making modifications to service performance reports as necessary.

Change Service Performance Report's goal is to ensure that the reports remain accurate and relevant.

Publish Service Performance Report

Process Identifier: 1.4.7.11.3

Hierarchy Level: 4

Brief Description:

Publish Service Performance Report involves preparing and issuing service performance reports in a timely manner.

Extended Description:

Publish Service Performance Report involves preparing and issuing service performance reports in a timely manner.

Publish Service Performance Report goal is to ensure that stakeholders have access to up-to-date facts and records about service performance.

Service Guiding & Mediation

Process Identifier: 1.4.8

Hierarchy Level: 2**Brief Description:**

Manage usage events by correlating and formatting them into a useful format as well as guiding them to an appropriate service.

Extended Description:

Service Guiding & Mediation processes manage usage events by correlating and formatting them into a useful format. These processes include guiding resource events to an appropriate service, mediation of these usage records, as well as de-duplication of usage records already processed. These processes provide information on customer-related and Service-related events to other process areas across assurance and billing. This includes reports on non-chargeable events and overcharged events and analysis of event records to identify fraud and prevent further occurrences.

In many cases, this process is performed by a resource such as a network element.

Figure 11: Service Guiding & Mediation Children

Mediate Service Usage Records

Process Identifier: 1.4.8.1

Hierarchy Level: 3

Brief Description:

Validate, normalize, convert and correlate usage records collected from the resource layer

Extended Description:

The purpose of the Mediate Service Usage Records process is to validate, normalize, convert and correlate usage records collected. It also removes any duplicate usage records that have already been processed.

Validate Service Usage Record

Process Identifier: 1.4.8.1.1

Hierarchy Level: 4

Brief Description:

Validate service usage records collected from the resource layer

Extended Description:

Not used for this process element

Normalize Service Usage Record

Process Identifier: 1.4.8.1.2

Hierarchy Level: 4

Brief Description:

Normalize service usage records to specific expression format.

Extended Description:

Not used for this process element

Convert Service Usage Record

Process Identifier: 1.4.8.1.3

Hierarchy Level: 4

Brief Description:

Convert service usage records to specific record format.

Extended Description:

Not used for this process element

Correlate Service Usage Record

Process Identifier: 1.4.8.1.4

Hierarchy Level: 4

Brief Description:

Correlate collected service usage records.

Extended Description:

Not used for this process element

Remove Duplicate Service Usage Record

Process Identifier: 1.4.8.1.5

Hierarchy Level: 4

Brief Description:

Remove service usage records.

Extended Description:

Not used for this process element

Report Service Usage Records

Process Identifier: 1.4.8.2

Hierarchy Level: 3

Brief Description:

Generate reports on usage records based on requests from other processes

Extended Description:

The purpose of the Report Service Usage Record processes is to generate reports on service usage records based on requests from other processes. These processes produce reports that may identify abnormalities, which may be caused by fraudulent activity or related to customer complaints.

Guide Resource Usage Records

Process Identifier: 1.4.8.3

Hierarchy Level: 3

Brief Description:

Relates the usage record to the appropriate service.

Extended Description:

The Guide Resource Usage Records process converts/relates the record to the appropriate service.

In many cases, this process is performed by a resource such as a network element.

Service Capacity Management

Process Identifier: 1.4.12

Hierarchy Level: 2

Brief Description:

Service Capacity Management business process manage the activities required to ensure a business is able to plan, analyze, optimize, monitor and report on capacity and constraints associated to services in response to business requirements (e.g. SLRs) and objectives (e.g. SLAs, SLOs etc.).

Extended Description:

Service Capacity Management business process manage the activities required to ensure a business is able to plan, analyze, optimize, monitor and report on capacity and constraints associated to services in response to business requirements (e.g. SLRs) and objectives (e.g. SLAs, SLOs etc.).

Service capacity is the volume of activity that a service offered can handle while maintaining standards of quality and performance. The underlying business activities supporting Service Capacity Management ensure that there is an effective understanding and management of service delivery business objectives, based on all underlying constraints.

Figure 12: Service Capacity Management Children

Plan Service Capacity

Process Identifier: 1.4.12.1

Hierarchy Level: 3

Brief Description:

Plan Service Capacity business activity is in charge of determining the service delivery capacity needed to meet changing demand for services over a period of time, as well as implementing the plan that supports the goals of Service Capacity Management.

Extended Description:

Plan Service Capacity business activity is in charge of determining the service delivery capacity needed to meet changing demand for services over a period of time, as well as implementing the plan that supports the goals of Service Capacity Management.

Service Capacity Plan ensures Service Management aligns capacity planning strategies with business goals, while: ensuring that there are sufficient capability or supporting service capabilities to meet planned and forecasted business goals; identifying gaps in capacity allocation early; determining resource capacity needs according to demand, determining constraints and usage patterns over time; forecasting future capacity needs; and communicating resource capacity requirements in time.

In the context of service capacity planning, consideration is given to measuring performance and comparing it to requirements that are set in Service Level Agreements (SLAs) or Service Level Requirements (SLRs).

Align Service Capacity Planning Goals

Process Identifier: 1.4.12.2

Hierarchy Level: 3

Brief Description:

Align Service Capacity Planning Goals business activity correlates Service Capacity Plans (established as Service Level Objectives) with business demand, as defined in service level requirements (SLRs).

Extended Description:

Align Service Capacity Planning Goals business activity correlates Service Capacity Plans (established as Service Level Objectives) with business demand, as defined in service level requirements (SLRs).

Establish Service Capacity GAP

Process Identifier: 1.4.12.3

Hierarchy Level: 3

Brief Description:

Establish Service Capacity GAP business activity identifies any disparity between Service capacity goals (SLAs) and business objectives (SLOs).

Extended Description:

Establish Service Capacity GAP business activity identifies any disparity between Service capacity goals (SLAs) and business objectives (SLOs).

Forecast Service Capacity Need

Process Identifier: 1.4.12.4

Hierarchy Level: 3

Brief Description:

Forecast Service Capacity Need business activity develops projections that predict service capacity growth, by understanding the impact on business.

Extended Description:

Forecast Service Capacity Need business activity develops projections that predict service capacity growth, by understanding the impact on business.

Define Service Capacity Requirement

Process Identifier: 1.4.12.4.1

Hierarchy Level: 4

Brief Description:

Define Service Capacity Requirement business activity establishes, measures, and adjusts conditions that impact on planning service capacity performance.

Extended Description:

Define Service Capacity Requirement business activity establishes, measures, and adjusts conditions that impact on planning service capacity performance.

Establish Service Capacity Availability Timing Requirement

Process Identifier: 1.4.12.4.2

Hierarchy Level: 4

Brief Description:

Establish Service Capacity Availability Timing Requirement business activity identify scheduling needs for service capacity changes to be effective.

Extended Description:

Establish Service Capacity Availability Timing Requirement business activity identify scheduling needs for service capacity changes to be effective.

Implement Service Capacity Plan

Process Identifier: 1.4.12.5

Hierarchy Level: 3

Brief Description:

Implement Service Capacity Plan business activity puts into effect the steps to achieve Service Capacity Plans, with defined service capacity targets, and service capacity management course of action.

Extended Description:

Implement Service Capacity Plan business activity puts into effect the steps to achieve Service Capacity Plans, with defined service capacity targets, and service capacity management course of action.

Specify Required Service Capacity

Process Identifier: 1.4.12.5.1

Hierarchy Level: 4

Brief Description:

Specify Required Service Capacity business activity supports implementing service capacity plans by identifying clearly, and definitely, service capacity expectations (SLAs, SLOs etc.).

Extended Description:

Specify Required Service Capacity business activity supports implementing service capacity plans by identifying clearly, and definitely, service capacity expectations (SLAs, SLOs etc.).

Specify Service Capacity Course of Action

Process Identifier: 1.4.12.5.2

Hierarchy Level: 4

Brief Description:

Specify Service Capacity Course of Action business activity identifies clearly, and definitely, the sequence of activities that must be followed to support the 'Service Capacity Plan' expectations.

Extended Description:

Specify Service Capacity Course of Action business activity identifies clearly, and definitely, the sequence of activities that must be followed to support the 'Service Capacity Plan' expectations.

Analyze Service Capacity

Process Identifier: 1.4.12.6

Hierarchy Level: 3

Brief Description:

Analyze Service Capacity business activity establishes, and models insights, patterns and changes to service capacity, by assessing potential capacity needs, and actual capacity that a service currently achieves.

Extended Description:

Analyze Service Capacity business activity establishes, and models insights, patterns and changes to service capacity, by assessing potential capacity needs, and actual capacity that a service currently achieves.

This business activity covers collection of service-related data (usage data, performance data, operational data etc.) to support Service Management manager to identify patterns and insights relating to a Service.

Analyze Service Capacity supports Service Capacity Management by providing relevant and timely insights, including available capability, service "time and material" needs, etc. and how capacity utilization (allocated, in-use, unused) can be optimized to increase business value.

Assess Available Service Capacity

Process Identifier: 1.4.12.6.2

Hierarchy Level: 4

Brief Description:

Assess Available Service Capacity business activity evaluates unused service capacity in relation to service capacity plans, and service utilization trends.

Extended Description:

Assess Available Service Capacity business activity evaluates unused service capacity in relation to service capacity plans, and service utilization trends.

Model Service Capacity

Process Identifier: 1.4.12.6.3

Hierarchy Level: 4

Brief Description:

Model Service Capacity business activity establishes a representation of service capacity based on demand and defined business properties.

Extended Description:

Model Service Capacity business activity establishes a representation of service capacity based on demand and defined business properties.

Model Service Capacity provides a structure way to utilize information to improve the way services are delivered.

Figure 13: Model Service Capacity Children

Establish Service Capacity Utilization Behavior

Process Identifier: 1.4.12.6.3.1

Hierarchy Level: 5

Brief Description:

Establish Service Capacity Utilization Behavior business activity develops Service Capacity usage models.

Extended Description:

Establish Service Capacity Utilization Behavior business activity develops Service Capacity usage models.

Perform Service Capacity and Capacity Demand Trend Analysis

Process Identifier: 1.4.12.6.4

Hierarchy Level: 4

Brief Description:

Perform Service Capacity and Capacity Demand Trend Analysis business activity analysis trends between available service capacity and service capacity demand according to business and ongoing service usage.

Extended Description:

Perform Service Capacity and Capacity Demand Trend Analysis business activity analysis trends between available service capacity and service capacity demand according to business and ongoing service usage.

Optimize Service Capacity

Process Identifier: 1.4.12.7

Hierarchy Level: 3

Brief Description:

Optimize Service Capacity business activity is in charge of improving service capacity usage, by managing underlying and related dependencies, and constraints.

Extended Description:

Optimize Service Capacity business activity is in charge of improving service capacity usage, by managing underlying and related dependencies, and constraints.

For Service Capacity Management, Optimize Service Capacity can enable reclaim unused or available Resource capacities, and also allocate additional capacity just in time to meet demand. It can also help to repurpose resources based on their capacity utilization patterns, and support configuration management of all constraints and dependencies.

Manage Service Capacity Thresholds

Process Identifier: 1.4.12.7.1

Hierarchy Level: 4

Brief Description:

Manage Service Capacity Thresholds business activity is in charge of administering service capacity thresholds based on business and operational conditions, and concerns.

Extended Description:

Manage Service Capacity Thresholds business activity is in charge of administering service capacity thresholds based on business and operational conditions, and concerns.

Figure 14: Manage Service Capacity Thresholds Children

Adjust Service Capacity

Process Identifier: 1.4.12.7.1.1

Hierarchy Level: 5

Brief Description:

Adjust Service Capacity business activity is in charge of fulfilling changes to Service Capacity.

Extended Description:

Adjust Service Capacity business activity is in charge of fulfilling changes to Service Capacity.

Allocate Service Capacity

Process Identifier: 1.4.12.7.1.2

Hierarchy Level: 5

Brief Description:

Allocate Service Capacity business activity assign the amount in capacity that a service must support.

Extended Description:

Allocate Service Capacity business activity assign the amount in capacity that a service must support.

Monitor Service Capacity

Process Identifier: 1.4.12.8

Hierarchy Level: 3

Brief Description:

Monitor Service Capacity business activity identifies relevant service capacity attributes/properties, and monitors and tracks all service attributes, their use, and changes.

Extended Description:

Monitor Service Capacity business activity identifies relevant service capacity attributes/properties, and monitors and tracks all service attributes, their use, and changes.

Monitor Service Capacity supports all activities in Service Capacity Management by providing timely visibility for all concerns around service capacity.

Report Service Capacity

Process Identifier: 1.4.12.9

Hierarchy Level: 3

Brief Description:

Report Service Capacity business activity prepares and presents detailed accounts of all relevant service capacity information, in a timely manner, and in ways that are relevant and reliable for use by business.

Extended Description:

Report Service Capacity business activity prepares and presents detailed accounts of all relevant service capacity information, in a timely manner, and in ways that are relevant and reliable for use by business.

Different business functions with interest for Resource Capacity may require specific reports with specific information. This business activity ensures reports for Resource Capacity are collated, organized and presented in ways that are useful, and reliable to the needs of business functions in a timely manner.

Service Catalog Lifecycle Management

Process Identifier: 1.4.13

Hierarchy Level: 2

Brief Description:

Catalog Lifecycle Management business process covers a set of business activities that enable manage the lifecycle of an organizations catalog from design to build according to defined requirements.

Extended Description:

Catalog Lifecycle Management business process covers a set of business activities that enable manage the lifecycle of an organizations catalog from design to build according to defined requirements.

Catalog Lifecycle Management proves the overarching governance to manage all the stages in the realization and operationalization of the Product/Service/Resource Catalog in support of the organizations business goals.

Figure 15: Service Catalog Lifecycle Management Children

Manage Service Catalog Design

Process Identifier: 1.4.13.1

Hierarchy Level: 3

Brief Description:

Manage Catalog Design business activity cover the design of the Catalog in accordance to the Catalog Management Lifecycle.

Extended Description:

Manage Catalog Design business activity cover the design of the Catalog in accordance to the Catalog Management Lifecycle.

Manage Catalog Design business activity will leverage Catalog Specification requirement for all information (features, attributes etc.) to be managed by the catalog in order to enable support the Catalog Lifecycle Management.

Manage Service Catalog Build

Process Identifier: 1.4.13.2

Hierarchy Level: 3

Brief Description:

Manage Catalog Design business activity covers the design of the Catalog in accordance to the Catalog Management Lifecycle.

Extended Description:

Manage Catalog Design business activity covers the design of the Catalog in accordance to the Catalog Management Lifecycle.

This business activity leverages input from the Catalog Design to construct the product/service/resource Catalog in order to meet the business operations goals.

Manage Service Catalog Policy

Process Identifier: 1.4.13.3

Hierarchy Level: 3

Brief Description:

Manage Catalog Build business activity establishes, manages and administers the governing of the catalog for operations readiness and operations.

Extended Description:

Manage Catalog Build business activity establishes, manages and administers the governing of the catalog for operations readiness and operations.

This business activity leverages support of the Enterprise governance processes for product/service/resource catalog lifecycle management.

Service Catalog Operational Readiness Management

Process Identifier: 1.4.14

Hierarchy Level: 2

Brief Description:

Service Catalog Operational Readiness Management business process establishes and administers the support needed to operationalize Service catalogs for ongoing day-to-day business needs.

Extended Description:

Service Catalog Operational Readiness Management business process establishes and administers the support needed to operationalize Service catalogs for ongoing day-to-day business needs.

These business activities implement the Service Catalog through Release and Deploy business activities.

Figure 16: Service Catalog Operational Readiness Management Children

Release Service Catalog

Process Identifier: 1.4.14.1

Hierarchy Level: 3

Brief Description:

Release Service Catalog business activity ensure all cross-functional activities needed to support catalog maintenance and operations, such as training and updating the support of the catalog are in place.

Extended Description:

Release Service Catalog business activity ensure all cross-functional activities needed to support catalog maintenance and operations, such as training and updating the support of the catalog are in place.

Release Service Catalog business activity includes identifying stakeholders, catalog integration, catalog federation etc. for any scenario in support of the organizations business goals, including Release conditions that support users, customers and business partners.

Plan & Schedule Service Catalog Release

Process Identifier: 1.4.14.1.1

Hierarchy Level: 4

Brief Description:

Plan & Schedule Service Catalog Release business activity is used to handle the release plan for the Service Catalog.

Extended Description:

Plan & Schedule Service Catalog Release business activity is used to handle the release plan for the Service Catalog.

Control Service Catalog Release

Process Identifier: 1.4.14.1.2

Hierarchy Level: 4

Brief Description:

Control Service Catalog Release business activity is used to support the various catalog release tasks.

Extended Description:

Control Service Catalog Release business activity is used to support the various catalog release tasks.

Test Service Catalog

Process Identifier: 1.4.14.1.3

Hierarchy Level: 4

Brief Description:

Test Service Catalog business activity is used to establish the quality, reliability and performance requirement of the catalog according to the Service management needs.

Extended Description:

Test Service Catalog business activity is used to establish the quality, reliability and performance requirement of the catalog according to the Service management needs.

Deploy Service Catalog

Process Identifier: 1.4.14.2

Hierarchy Level: 3

Brief Description:

Deploy Service Catalog business activity manage the availability and use of the Service catalog in operations.

Extended Description:

Deploy Service Catalog business activity manage the availability and use of the Service catalog in operations.

Deploy Service Catalog business activity includes identifying stakeholders, creating catalog category hierarchies, catalog integration, and catalog federation for any scenario, such as with business partners and between business functions.

Service Catalog Content Management

Process Identifier: 1.4.15

Hierarchy Level: 2

Brief Description:

Service Catalog Content Management business process define and provide the business activities that support the day-to-day operations of Service Catalogs in order to realize the business operations goals.

Extended Description:

Service Catalog Content Management business process define and provide the business activities that support the day-to-day operations of Service Catalogs in order to realize the business operations goals.

Service Catalog Content Management business processes include administering the Service Catalog instance in production, maintaining catalog entries, assuring catalogs, managing catalog access, managing entry lifecycle through versioning, handling catalog entity entry and changes, supporting distribution of catalogs as needed, and supporting user-facing activities.

Figure 17: Service Catalog Content Management Children

Maintain Service Catalog Content

Process Identifier: 1.4.15.1

Hierarchy Level: 3

Brief Description:

Maintain Service Catalog Content business activity handles catalog content entry for adding or updating the operational Catalog by following the established Catalog Content Management operations standards and policies.

Extended Description:

Maintain Service Catalog Content business activity handles catalog content entry through adding or updating the Catalog by following the established Catalog Content Management standards and policies.

Manage Catalog Entry support the following activities and sub-activities:

Maintaining Catalog Content Versions

Maintain Catalog Content Relationship

Maintain Catalog Content taxonomy

Organize Catalog Entry

Classify Catalog Entry

Maintain Service Catalog Content Version

Process Identifier: 1.4.15.1.1

Hierarchy Level: 4

Brief Description:

Maintain Service Catalog Content Version business activity handles tracking and controlling changes for Service catalog entries.

Extended Description:

Maintain Service Catalog Content Version business activity handles tracking and controlling changes for Service catalog entries.

Maintain Service Catalog Content Relationship

Process Identifier: 1.4.15.1.2

Hierarchy Level: 4

Brief Description:

Maintain Service Catalog Content Relationship business activity handles associating Service catalog entries.

Extended Description:

Maintain Service Catalog Content Relationship business activity handles associating Service catalog entries.

Catalog Content Relationship for Service catalog entries can be internal and external to the Product, Service or Resource domains.

Maintain Service Catalog Content Entry

Process Identifier: 1.4.15.1.3

Hierarchy Level: 4

Brief Description:

Maintain Service Catalog Content Entry business activity handles content entry, content organization, content classification in the Service Catalog according to the Service Catalog model.

Extended Description:

Maintain Service Catalog Content Entry business activity handles content entry, content organization, content classification in the Service Catalog according to the Service Catalog model.

Figure 18: Maintain Service Catalog Content Entry Children

Classify Service Catalog Content Entry

Process Identifier: 1.4.15.1.3.2

Hierarchy Level: 5

Brief Description:

Classify Service Catalog Content Entry business activity specifically handles Catalog Content organization according to business classification characteristics for the Service Catalog.

Extended Description:

Classify Service Catalog Content Entry business activity specifically handles Catalog Content organization according to business classification characteristics for the Service Catalog.

Classify Service Catalog Content Entry is specific to shared qualities or characteristics defined by the organization.

Organize Service Catalog Content Entry

Process Identifier: 1.4.15.1.3.1

Hierarchy Level: 5

Brief Description:

Organize Service Catalog Content Entry business activity handles Catalog Content organization according to the Service Catalog model.

Extended Description:

Organize Service Catalog Content Entry business activity handles Catalog Content organization according to the Service Catalog model.

Organize Catalog Content Entry business activities can include ordering, arranging, sorting, assembling, and grouping.

Manage Service Catalog Access

Process Identifier: 1.4.15.2

Hierarchy Level: 3

Brief Description:

Manage Service Catalog Access business activity handles access to the catalog according to the Catalog Content Management standards and policies.

Extended Description:

Manage Service Catalog Access business activity handles access to the catalog according to the Catalog Content Management standards and policies.

Manage Service Catalog Access will handle assigning catalog managers and granting privileges.

Manage Service Catalog Content Lifecycle

Process Identifier: 1.4.15.3

Hierarchy Level: 3

Brief Description:

Manage Service Catalog Content Lifecycle business activity handles changes to catalog content according to the Catalog Content Management standards and policies.

Extended Description:

Manage Service Catalog Content Lifecycle business activity handles changes to catalog content according to the Catalog Content Management standards and policies.

Distribute Service Catalog

Process Identifier: 1.4.15.4

Hierarchy Level: 3

Brief Description:

Distribute Service Catalog business activity handles exchange and distribution of catalogs according to the Catalog Content Management standards and policies.

Extended Description:

Distribute Service Catalog business activity handles exchange and distribution of catalogs according to the Catalog Content Management standards and policies.

Service Catalog Planning Management

Process Identifier: 1.4.16

Hierarchy Level: 2

Brief Description:

Service Catalog Planning Management business process covers a set of business activities that understand and enable establish the plan to define, design and operationalize a catalog in order to meet the needs and objectives of Service cataloging.

Extended Description:

Service Catalog Planning Management business process covers a set of business activities that understand and enable establish the plan to define, design and operationalize a catalog in order to meet the needs and objectives of Service cataloging.

The Service Catalog Planning Management business process ensure that the organization is able to identify the most appropriate scheme and goal for it catalog. It includes designing the Catalog plan and developing the specification according to Service management requirement.

Figure 19: Service Catalog Planning Management Children

Design Service Catalog Plan

Process Identifier: 1.4.16.1

Hierarchy Level: 3

Brief Description:

Design Catalog Plan business activity understands requirements and capabilities demanded from the business to establish the Catalog plan based on the Service strategy for Service Catalog Planning Management.

Extended Description:

Service Design Catalog Plan business activity understands requirements and capabilities demanded from the business to establish the Catalog plan based on the Service strategy for Service Catalog Planning Management.

Define Service Catalog Specification

Process Identifier: 1.4.16.2

Hierarchy Level: 3

Brief Description:

Define Catalog Specification business activity establishes the Catalog specifications based on the product/service/resource strategy to support Catalog Planning Management.

Extended Description:

Define Catalog Specification business activity establishes the Catalog specifications based on the product/service/resource strategy to support Catalog Planning Management.

Define Catalog Specification leverages Specification Management business activities to establish the mandatory and optional design requirements, as well as catalog entry fields according to product/service/resource management needs. This process will be governed by the Enterprise Business Process for Catalog Management.

Service Anomaly Lifecycle Management

Process Identifier: 1.4.17

Hierarchy Level: 2

Brief Description:

Service Anomaly Lifecycle Management business process establishes and controls all activities that are involved in overseeing, directing, administering, controlling and organizing the definition, detection/prediction, mitigation and learnings related to Service Anomaly Management.

Extended Description:

Service Anomaly Lifecycle Management business process establishes and controls all activities that are involved in overseeing, directing, administering, controlling and organizing the definition, detection/prediction, mitigation and learnings related to Service Anomaly Management.

Service Anomaly Lifecycle Management cover the lifecycle activities, including:

Establishing “what is normal” for Service in order to inform “deviations” or aberrations.

Orchestrating Service Anomaly Management activities to meet business needs.

Managing the ability to acquire and apply knowledge and skills from past and present Service anomalies.

Managing actions that make the best or effective use of Service Management Closed Loops.

Monitoring feedback to and from Service Management to support Service Anomaly Management activities.

Reporting on Service Anomaly Management Closed Loops.

Figure 20: Service Anomaly Lifecycle Management Children

Manage Service Anomaly Definition

Process Identifier: 1.4.17.1

Hierarchy Level: 3

Brief Description:

Manage Service Anomaly Definition business activity is in charge of defining and describing the information about data which is used in Service Anomaly Management.

Extended Description:

Manage Service Anomaly Definition business activity is in charge of defining and describing the information about data which is used in Service Anomaly Management.

Manage Service Anomaly Definition business activity covers activities that describe the criteria, characteristics, and expectations of information required for Service Anomaly Detection. All descriptions and definitions of the information about data use in Service Anomaly Management business activities may include, but not be limited to "normal pattern data", "constraints data", "goals data" etc.

Define Service Anomaly Closed Loop

Process Identifier: 1.4.17.1.1

Hierarchy Level: 4

Brief Description:

Define Service Anomaly Closed Loop business activity state and describe the Service Anomaly Closed Loops along with associated information that lead to identifying, detecting or predicting a Service Anomaly.

Extended Description:

Define Service Anomaly Closed Loop business activity state and describe the Service Anomaly Closed Loops along with associated information that lead to identifying, detecting or predicting a Service Anomaly.

This business activity supports Anomaly definition process and the Closed Loops associated, including all associated inputs that reasonably affect the management of an Anomaly Lifecycle. This activity also ensures that the organization understands, and has well-defined operational workflows underpinning Anomaly Management.

Establish Anomaly Criteria

Process Identifier: 1.4.17.1.2

Hierarchy Level: 4

Brief Description:

Establish Service Anomaly Criteria business activity is in charge of defining and identifying all criteria needed to identify and predict deviation from what is known standard, normal, or expected of Products according to business dictates.

Extended Description:

Establish Service Anomaly Criteria business activity is in charge of defining and identifying all criteria needed to identify and predict deviation from what is known standard, normal, or expected of Products according to business dictates.

Establishing a Product's anomalous criterion is key to enable differentiate norms or standards from what is not. This will include specific Service design constraints (e.g. Service strategy, service offering, service goals) or Service operations.

Establish Service Anomaly Closed Loop Information Sources

Process Identifier: 1.4.17.1.3

Hierarchy Level: 4

Brief Description:

Establish Service Anomaly Closed Loop Information Sources business activity identifies all information sources and the requisite data that must be managed to support Service Anomaly Management Closed Loops.

Extended Description:

Establish Service Anomaly Closed Loop Information Sources business activity identifies all information sources and the requisite data that must be managed to support Service Anomaly Management Closed Loops.

Establish Service Anomaly Closed Loop Information Sources help to identify the information (not limited to business and operations rules), business logic, levels of classification (by importance, by period etc.), impact and urgency etc. that can help detect Service Anomaly. This process supports Service Anomaly Management during day-to-day service delivery.

Orchestrate Service Anomaly Management Closed Loop

Process Identifier: 1.4.17.2

Hierarchy Level: 3

Brief Description:

Orchestrate Service Anomaly Management Closed Loop business activity is in charge of organizing, arranging and coordinating changes that control Service Anomaly Management Closed Loops.

Extended Description:

Orchestrate Service Anomaly Management Closed Loop business activity is in charge of organizing, arranging and coordinating changes that control Service Anomaly Management Closed Loops.

This business activity will cover:

Managing Service Anomaly Detection activities - initiating, suspending, maintaining, and terminating.

Organizing Service Anomaly Detection activities - including arranging the sequence for Closed Loop activities.

Coordinating changes to a Service Anomaly Management Closed Loop.

Manage Service Anomaly Profile

Process Identifier: 1.4.17.2.1

Hierarchy Level: 4

Brief Description:

Manage Service Anomaly Profile business activity is in charge of recording and analyzing Service Anomaly Management frameworks in order to enable assess and predict Service Anomaly Management capabilities according to well-specified service management models

Extended Description:

Manage Service Anomaly Profile business activity is in charge of recording and analyzing Service Anomaly Management frameworks in order to enable assess and predict Service Anomaly Management capabilities according to well-specified service management models.

Manage Service Anomaly Profile supports Service Anomaly Management operations, as well as capturing the business intents that need to be associated with Service Anomaly Closed Loops and Service Anomaly Management Lifecycle.

Monitor Service Anomaly Management Closed Loop

Process Identifier: 1.4.17.3

Hierarchy Level: 3

Brief Description:

Monitor Service Anomaly Management Closed Loop business activity provides the capability to observe Service Anomaly Management Closed Loops.

Extended Description:

Monitor Service Anomaly Management Closed Loop business activity provides the capability to observe Service Anomaly Management Closed Loops.

This business activity helps to scan; watch; monitor; and gain awareness of Service Anomaly Management activities that provide feedback between Service Anomaly Management Lifecycle(s) stages.

Report Service Anomaly Management Closed Loop

Process Identifier: 1.4.17.4

Hierarchy Level: 3

Brief Description:

Report Service Anomaly Management Closed Loop business activity documents information organized to deliver an account of any, and all Service Anomaly Closed Loops.

Extended Description:

Report Service Anomaly Management Closed Loop business activity documents information organized to deliver an account of any, and all Service Anomaly Closed Loops.

Anomaly Closed Loops may fall into either or across any of the four stages in any of the overarching Closed Loop pattern - Observe, Orient, Decide and Act - or other variations.

Manage Service Anomaly Intelligence

Process Identifier: 1.4.17.5

Hierarchy Level: 3

Brief Description:

Manage Service Anomaly Intelligence business activity is in charge of acquiring and applying new learning, knowledge and skills to Service Anomaly Management.

Extended Description:

Manage Service Anomaly Intelligence business activity is in charge of acquiring and applying new learning, knowledge and skills to Service Anomaly Management.

This business activity supports improving, optimizing, or evolving Service Anomaly Management activities. Manage Service Anomaly Intelligence helps to incorporate new knowledge and skills into Service Anomaly Management processes. This is as well to enable improvement and optimization of all Anomaly Management in a continuum.

Manage Service Anomaly Optimization

Process Identifier: 1.4.17.6

Hierarchy Level: 3

Brief Description:

Manage Service Anomaly Optimization business activity is in charge of actions that make the best and most effective use of Service Anomaly Management activities to improve Service Anomaly Management.

Extended Description:

Manage Service Anomaly Optimization business activity is in charge of actions that make the best and most effective use of Service Anomaly Management activities to improve Service Anomaly Management and ultimately Service Management.

Manage Service Anomaly Optimization business activity can manage the business logic and business rules associated with Service Anomaly Detection, Service Anomaly Assessment, Service Anomaly Forecasting and Prediction, Service Anomaly Mitigation, as well as underlying Service Knowledge Management.

This business activity also includes fine-tuning of business logic, operations logic, business and operations rules that improve efficiency of Anomaly Management as a whole.

Service Anomaly Management

Process Identifier: 1.4.18

Hierarchy Level: 2

Brief Description:

Service Anomaly Management business processes establish actions that predict and detect aberrations or outlier events/activities, assess them for their impact, mitigate them, and record them before they ever become Service Problem Management concerns.

Extended Description:

Service Anomaly Management business processes establish actions that predict and detect aberrations or outlier events/activities, assess them for their impact, mitigate them, and record them before they ever become Service Problem Management concerns.

By establishing that an action or event is abnormal (based on known patterns), Service Anomaly Management helps to assess them through a set of activities that may triage, plan detailed assessment, classify them and provide mitigatory actions for them. Through Service Anomaly Management, assurance of Products, based on abnormal events or activities can be well categorized, prioritized and actioned on. Service Anomaly Management is different from Service Problem Management as the later addresses known issues, faults or problems.

Figure 21: Service Anomaly Management Children

Predict Service Anomaly

Process Identifier: 1.4.18.1

Hierarchy Level: 3

Brief Description:

Predict Service Anomaly business activity is in charge of declaring or indicating in advance (or foretells on the basis of service delivery observations, service use experience or service management reasons) upcoming exceptions, as well as trends that can lead to outlier activities / events or service problems.

Extended Description:

Predict Service Anomaly business activity is in charge of declaring or indicating in advance (or foretells on the basis of service delivery observations, service use experience or service management reasons) upcoming exceptions, as well as trends that can lead to outlier activities / events or service problems.

Service Anomaly Prediction business activity can help to detect and interpret early activities or events with their impending exceptions while suggesting causes.

Forecast Service Anomaly

Process Identifier: 1.4.18.1.1

Hierarchy Level: 4

Brief Description:

Forecast Service Anomaly business activity predicts future Service Anomaly along with implications using historical, and /or ongoing patterns observed through exceptions.

Extended Description:

Forecast Service Anomaly business activity predicts future Service anomaly along with implications using historical, and /or ongoing patterns observed through exceptions.

Forecast Service Anomaly business activity may include what-if analysis, or impact analysis of the anomalous exceptions. Forecast Service Anomaly business activity supports the identification of potential risks of an exception, and the course of action needed to avoid potential risks.

Detect Service Anomaly

Process Identifier: 1.4.18.2

Hierarchy Level: 3

Brief Description:

Detect Service Anomaly business activity identify Service delivery activities that are a deviation (aberrations or abnormal actions/events) from well-define norms or expectations.

Extended Description:

Detect Service Anomaly business activity identify Service delivery activities that are a deviation (aberrations or abnormal actions/events) from well-define norms or expectations.

Service Anomaly Detection finds patterns in Service Management activities, as well as with engaged parties given a deviation from planned, or expected business objectives or goals.

Identify Service Exception

Process Identifier: 1.4.18.2.1

Hierarchy Level: 4

Brief Description:

Identify Service Exceptions business activity supports the detection of Service Anomaly by investigating (recognizing and establishing) particular activity or event as an exception.

Extended Description:

Identify Service Exception business activity supports the detection of Service Anomaly by investigating (recognizing and establishing) particular activity or event as an exception.

Identify Service Exception business activity will support all Service Anomaly Management business activities - Assess Service Anomaly, Predict Service Anomaly, Mitigate Service Anomaly and Learn Service Anomaly.

Treat Service Exception

Process Identifier: 1.4.18.2.2

Hierarchy Level: 4

Brief Description:

Treat Service Exception business activity provides the set of actions that support managing a products' anomalous exception.

Extended Description:

Treat Service Exception business activity provides the set of actions that support managing a products' anomalous exception.

This covers actions that may be:

Proactive: Where the treatment of the conditions leading from the exception are controlled;

Reactive: Where the treatment is directly in response to the exception.

Treat Service Exceptions business activity helps to outline a series of actions that can expedite decisions for mitigation.

Escalate Service Exceptions

Process Identifier: 1.4.18.2.3

Hierarchy Level: 4

Brief Description:

Escalate Service Exception business activity is in charge of increasing the attention given to handling of a Service Exception.

Extended Description:

Escalate Service Exception business activity is in charge of increasing the attention given to handling of a Service Exception.

Escalating a Product's exception may be based on several factors, including defined business rules of escalation, or the lack thereof for handling a product's exception.

Assess Service Anomaly

Process Identifier: 1.4.18.3

Hierarchy Level: 3

Brief Description:

Assess Service Anomaly business activity check, estimate, appraise and evaluate Service anomaly observations to determine implications and follow-on treatment.

Extended Description:

Assess Service Anomaly business activity check, estimate, appraise and evaluate Service anomaly observations to determine implications and follow-on treatment.

Assess Service Anomaly ensures that the business can ascertain understanding of a product's anomalous activity, its extent/scale, cause and effect, and provide evidence-based information to develop courses of action.

Triage Service Exception

Process Identifier: 1.4.18.3.1

Hierarchy Level: 4

Brief Description:

Triage Service Exception business activity is in charge of identifying and assigning the degrees of urgency, and the order of treatment of products' anomalous exceptions.

Extended Description:

Triage Service Exception business activity is in charge of identifying and assigning the degrees of urgency, and the order of treatment of products' anomalous exceptions.

Triage Service Exceptions sub activities may include prioritizing exceptions and underlying Service anomaly events while examining causes that enable apply an initial set of mediatory actions.

Plan and Select Service Anomaly Assessment Criteria

Process Identifier: 1.4.18.3.2

Hierarchy Level: 4

Brief Description:

Plan and Select Service Anomaly Assessment Criteria business activity define the course of action to assess a Service anomaly, along with organizing the product's anomaly assessment criteria in order to best facilitate detection and mitigation of anomalies

Extended Description:

Plan and Select Service Anomaly Assessment Criteria business activity define the course of action to assess a Service anomaly, along with organizing the product's anomaly assessment criteria in order to best facilitate detection and mitigation of anomalies.

The 'Plan and Select Service Assessment Criteria' process helps the organization to optimize the approaches to assess Service anomaly criteria in order to continually avoid impact of false positives and/or false negatives in the detection of Service anomalies.

Analyze Service Anomalies to Learning

Process Identifier: 1.4.18.3.3

Hierarchy Level: 4

Brief Description:

Analyze Service Anomalies to Learning business activity establish actions to discover and correlate anomalous behavior to 'learned normal' or 'expected behavior'.

Extended Description:

Analyze Service Anomalies to Learning business activity establish actions to discover and correlate anomalous behavior to 'learned normal' or 'expected behavior'.

Analyze Service Anomalies to Learning sub activities help to enrich the organization's Anomaly Detection activities altogether, which can result in a reduction in the time to detect, triage and treat Service anomalies.

Classify Service Anomaly

Process Identifier: 1.4.18.3.4

Hierarchy Level: 4

Brief Description:

Classify Service Anomaly business activity establish ways to organize Service anomalies into established categories according to business priorities and objectives.

Extended Description:

Classify Service Anomaly business activity establish ways to organize Service anomalies into established categories according to business priorities and Service management objectives.

Classify Service Anomaly includes establishing robust classification models that help to triage anomalies, identify communication needs, determine and measure impact, and report on Service anomalies.

Manage Service Anomaly Assessment Feedback Reporting

Process Identifier: 1.4.18.3.5

Hierarchy Level: 4

Brief Description:

Manage Service Anomaly Assessment Feedback Reporting business activity is in charge of establishing and handling the activities that prepare and report the feedback based of Service Anomaly Assessment activity.

Extended Description:

Manage Service Anomaly Assessment Feedback Reporting business activity is in charge of establishing and handling the activities that prepare and report the feedback based of Service Anomaly Assessment activity.

Manage Service Anomaly Assessment Feedback business activity covers tasks that prepare and report feedback of an Anomaly Assessment activity. This business activity is also helpful in supporting the optimization of the Anomaly Detection business activity, such as fine-tuning know-how for Service anomaly detection.

Reports generated from this business activity can be utilized for Service Anomaly Mitigation and can help to select the consequent actions required to mitigate a Service anomaly.

Mitigate Service Anomaly

Process Identifier: 1.4.18.4

Hierarchy Level: 3

Brief Description:

Mitigate Service Anomaly business activity is in charge of allaying or alleviate the impact of a product's anomalous exception.

Extended Description:

Mitigate Service Anomaly business activity is in charge of allaying or alleviate the impact of a product's anomalous exception.

Mitigate Service Anomaly identify and coordinate mitigatory actions required for product's anomalous exceptions, including the initiation of remedial actions, and providing support to monitor and report on the mitigatory action.

Mitigate Service Anomaly can ensure the effect of a detected anomalous exception is minimized or resolved through appropriate actions. The aim of this business activity is to reduce Service Problem Management occurrence.

Identify Service Exception Mitigation

Process Identifier: 1.4.18.4.1

Hierarchy Level: 4

Brief Description:

Identify Service Exception Mitigation business activity helps to map product's anomalous exceptions with actions that will reduce impact to business.

Extended Description:

Identify Service Exception Mitigation business activity helps to map product's anomalous exceptions with actions that will reduce impact to business.

Identifying Service exception and their mitigatory action involves tasks that may leverage established business policies and constraints, and/or be based on knowledge and skills related to context.

This business activity helps to incorporate the right treatment based on the importance, impact or risk factors involved in a products operation. Any treatment of this nature can be static, based on pre-defined business rules, or dynamic based on skills and knowledge derived from context.

Coordinate Service Exception Mitigation

Process Identifier: 1.4.18.4.2

Hierarchy Level: 4

Brief Description:

Coordinate Service Exception Mitigation business activity is in charge of managing the different activities of an exception mitigation plan all together to successfully realize a mitigation plan.

Extended Description:

Coordinate Service Exception Mitigation business activity is in charge of managing the different activities of an exception mitigation plan all together to successfully realize a mitigation plan.

Initiate Service Exception Mitigation

Process Identifier: 1.4.18.4.3

Hierarchy Level: 4

Brief Description:

Initiate Service Exception Mitigation business activity is in charge of starting the correct activities that mitigate Service anomaly exceptions, cognizant of business requirement and goals.

Extended Description:

Initiate Service Exception Mitigation business activity is in charge of starting the correct activities that mitigate Service anomaly exceptions, cognizant of business requirement and goals.

Initiate Service Exception Mitigation actions include recommendations for course of actions, fostering dynamic execution of actions, and/or scheduling actions based on predetermined business conditions and policies.

Monitor Service Exception Mitigation

Process Identifier: 1.4.18.4.4

Hierarchy Level: 4

Brief Description:

Monitor Service Exception Mitigation business activity is in charge of observing, checking and keeping a continuous record of mitigatory actions that support Service Anomaly Management.

Extended Description:

Monitor Service Exception Mitigation business activity is in charge of observing, checking and keeping a continuous record of mitigatory actions that support Service Anomaly Management.

Monitor Service Exception Mitigation covers the action and data that are involved (including collection and analysis on predefined set of information – e.g. SLOs, SLAs, SLI etc.) in Service Anomaly Management business activities, tasks and workflows.

Report Service Exception Mitigation

Process Identifier: 1.4.18.4.5

Hierarchy Level: 4

Brief Description:

Report Service Exception Mitigation business activity is in charge of providing an account (documented or otherwise) of mitigatory actions taken to lessen or reduce the impact of a Service anomaly.

Extended Description:

Report Service Exception Mitigation business activity is in charge of providing an account (documented or otherwise) of mitigatory actions taken to lessen or reduce the impact of a Service anomaly.

Reporting on Service Exception Mitigation may follow well-defined business and operations criteria, or predefined set of metrics (e.g. SLOs, SLAs, SLIs, OLAs etc.) that are underlying to mitigate Service Anomaly Management business processes.

Manage Service Anomaly Learning

Process Identifier: 1.4.18.5

Hierarchy Level: 3

Brief Description:

Manage Service Anomaly Learning business activity is in charge of capturing, or acquiring knowledge and skill related to handled anomalous exceptions (from detection, through assessment to mitigation).

Extended Description:

Manage Service Anomaly Learning business activity is in charge of capturing, or acquiring knowledge and skill related to handled anomalous exceptions (from detection, through assessment to mitigation).

Manage Anomaly Learning business activity ensure that knowledge and skills gained from Service anomalies can aide future Service Anomaly Management activities.

Manage Service Anomaly Case History

Process Identifier: 1.4.18.5.1

Hierarchy Level: 4

Brief Description:

Manage Service Anomaly Case History business activity records all past information on Service Anomaly events, Service Anomaly Management activities and data underlying, and representing Service Anomaly cases.

Extended Description:

Manage Service Anomaly Case History business activity records all past information on Service Anomaly events, Service Anomaly Management activities and data underlying, and representing Service Anomaly cases.

Manage Service Anomaly Case History includes the maintenance of past and present records, all artifacts, knowledge-base (e.g. the specifications, profiles, exception patterns, action patterns etc.) and versioned information.

This business activity supports the organization to maintain skills and learning repository to identify and predict Anomalous Exception patterns and mitigatory actions.

Service Specification Management

Process Identifier: 1.4.19

Hierarchy Level: 2

Brief Description:

Service Specification Management business process leverages captured service requirements to develop, master, analyze, and update documented standard conditions that must be satisfied by service design and/or delivery.

Extended Description:

Service Specification Management business process leverages captured service requirements to develop, master, analyze, and update documented standard conditions that must be satisfied by service design and/or delivery.

Service Specifications Management can result in establishing, in a centralized way, technical (know-how) standards.

Such standards provide the organization with a means to control and approve the values and inputs of service specification through structure, review, approval and distribution processes to stakeholders and suppliers.

Figure 22: Service Specification Management Children

Describe Service Specifications

Process Identifier: 1.4.19.1

Hierarchy Level: 3

Brief Description:

Describe Service Specifications business activity identify and elaborate on the conditions for meeting service requirement for consistency, quality, functionality and fit for purpose.

Extended Description:

Describe Service Specifications business activity identify and elaborate on the conditions for meeting service requirement for consistency, quality, functionality and fit for purpose.

This activity leverages captured service requirements and resource preferences, and builds in tolerances according to stakeholders for service delivery partners to adhere to.

Describe Service Specifications Property

Process Identifier: 1.4.19.1.1

Hierarchy Level: 4

Brief Description:

Describe Service Specifications Property business activity set out and develop the rules, constraints, models and framing that bound the principles by which Service Specification can be modelled to support service requirements and the business objectives.

Extended Description:

Describe Service Specifications Property business activity set out and develop the rules, constraints, models and framing that bound the principles by which Service Specification can be modeled to support service requirements and the business objectives.

A Service Specification Property enumerates all the specification attributes and their units of management.

Align Service Specifications

Process Identifier: 1.4.19.1.2

Hierarchy Level: 4

Brief Description:

Align Service Specifications business activity is in charge of the alignment of service specification to functional and nonfunctional requirement.

Extended Description:

Align Service Specifications business activity is in charge of the alignment of service specification to functional and nonfunctional requirement.

The alignment of service specifications can be to other services as well as realization of the specific resource according to business concerns (e.g. cost, other accounting and non-accounting requirements etc.).

Model Service Specifications

Process Identifier: 1.4.19.2

Hierarchy Level: 3

Brief Description:

Model Resource Specifications business activity represents the understanding of collections of service specifications and the relationship dependencies in order to manage dependencies, improvement or evolution of standards that affect overall design and d

Extended Description:

Model Resource Specifications business activity represents the understanding of collections of service specifications and the relationship dependencies in order to manage dependencies, improvement or evolution of standards that affect overall design and delivery of service.

This business activity is used by organizations to establish a collection of standardized, pre-documented specifications, and their dependencies to guide service lifecycle management and service operations.

Analyze Service Specifications

Process Identifier: 1.4.19.3

Hierarchy Level: 3

Brief Description:

Analyze Service Specifications business activity research, assess and evaluate performance criteria and factors to develop, master, control/update services according to requirements.

Extended Description:

Analyze Service Specifications business activity research, assess and evaluate performance criteria and factors to develop, master, control/update services according to requirements.

This business activity can include multiple analyzes of service specifications, including standard analysis (based on empirical research) or custom analysis (based on other standards). Analysis of Service Specification include testing service specifications and the ability to meet business requirements, as well as conform to operational mandates.
